

**Supplementary Table 1.**

Clinicopathological features in 95 patients with PET data

	<i>F. nucleatum</i> expression		<i>p</i> -value
	Low (n=68)	High (n=27)	
Mean age	67	64	0.08
Sex			0.69
Male	60	26	
Female	8	1	
Location			0.54
Upper	22	7	
Lower	46	20	
T stage			0.12
T1	9	3	
T2	12	1	
T3-	47	23	
N stage			0.82
N0	6	2	
N1-3	62	25	

**Supplementary Table 2.**

## Clinicopathological features of Cohort B

<i>Total N=30</i>	
Mean age	69
Sex	
Male	27
Female	3
Location	
Upper	11
Lower	19
Stage	
II	7
III	10
IV	13

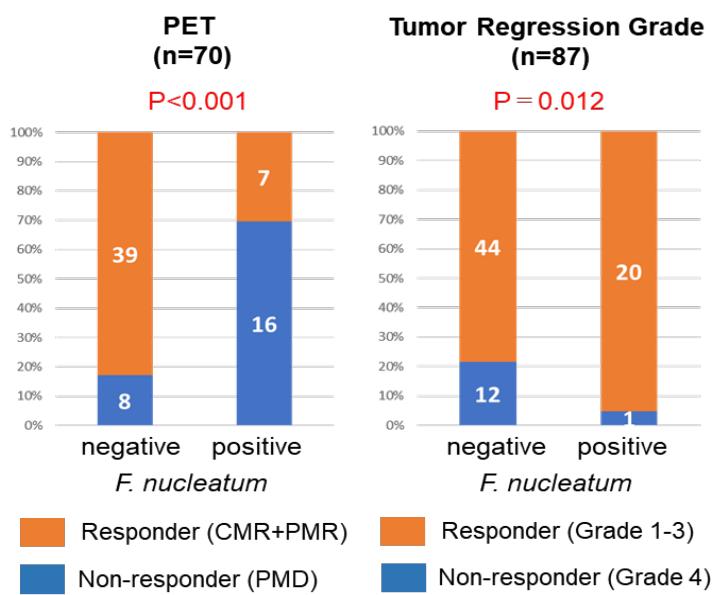

**Supplementary Table 3:** cohort C

	ATG-7 expression		<i>p</i> -value
	Low (n=225)	High (n=59)	
Mean age ± SD	66 (41-89)	66 (48-80)	0.72
Sex			0.17
Male	202	49	
Female	23	10	
Performance status			0.88
0	173	47	
1	42	10	
2	10	2	
Tobacco use			0.18
yes	194	55	
no	31	4	
Alcohol use			1.0
yes	214	57	
no	11	2	
Stage			0.02
0	16	0	
I	65	10	
II	59	21	
III	58	20	
IV	26	8	
Preoperative therapy			0.54
present	87	20	
Absent	138	39	

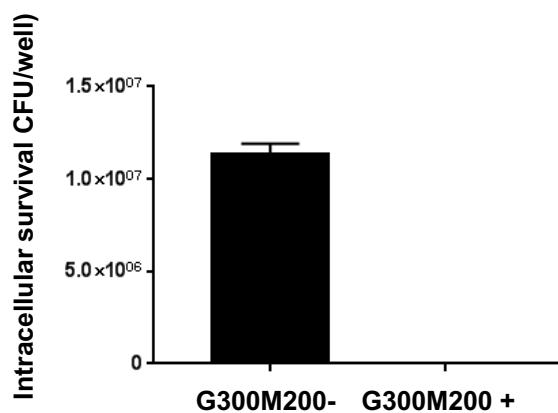

# Supplementary Figures

**A**

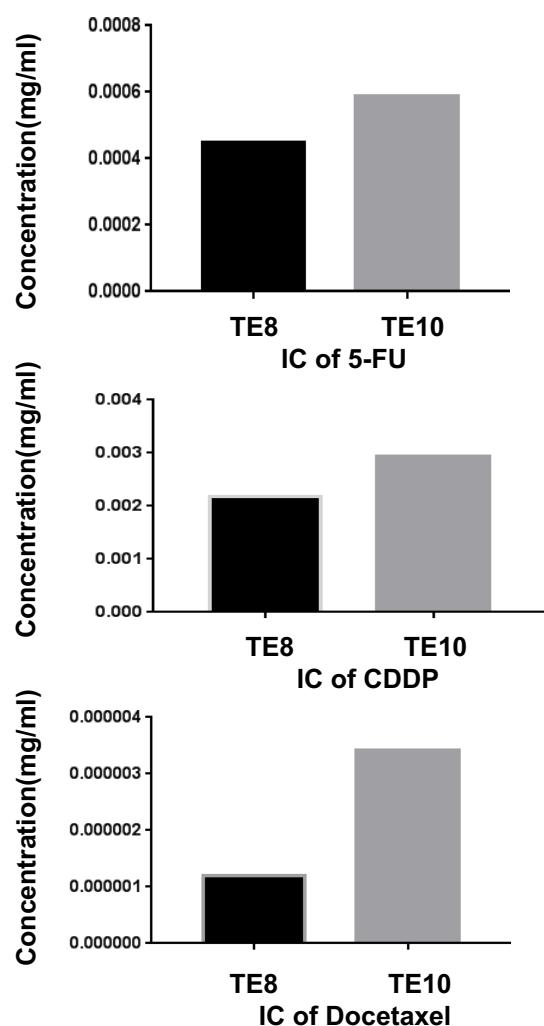

## T3 patients only

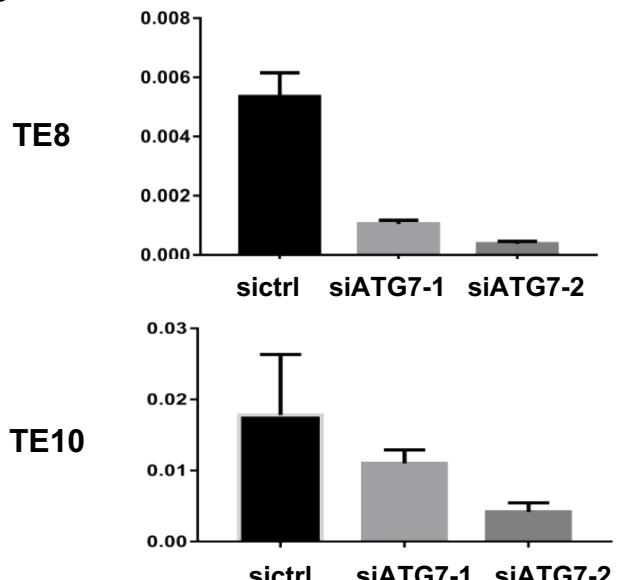

**B**

**C**

**D**

**A.** The responses of SUVmax and Tumor Regression Grade according to *F. nucleatum* status among T3 patients only in Cohort A.

**B.** Determination of minimum inhibitory concentration (MIC) to demonstrate that metronidazole (200 $\mu$ g/ml) and gentamicin (300 $\mu$ g/ml) kill  $5 \times 10^7$ /ml *F. nucleatum* in 1 h completely.

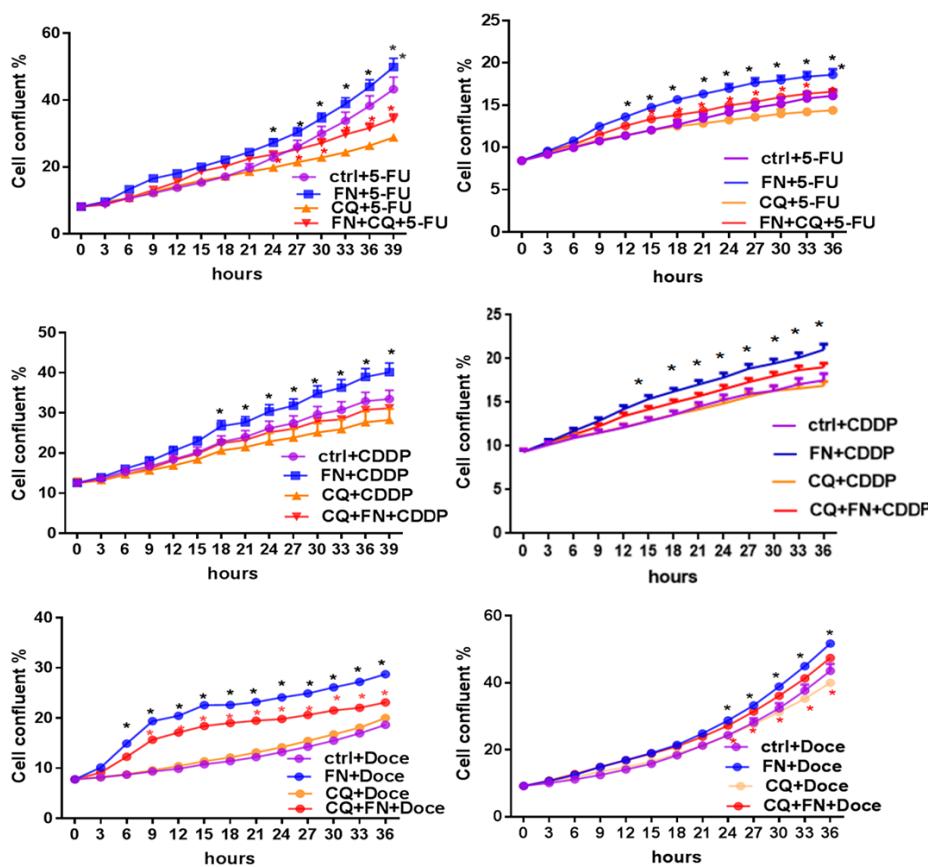

**C.** Half-maximal inhibitory concentration (IC50) of 5-FU, CDDP, and Docetaxel in TE8 and TE10 cells calculated according to growth assay.

**D.** qPCR analysis to check the mRNA levels of ATG7 upon knockdown using siATG7-1 and siATG7-2 in 72 hours.

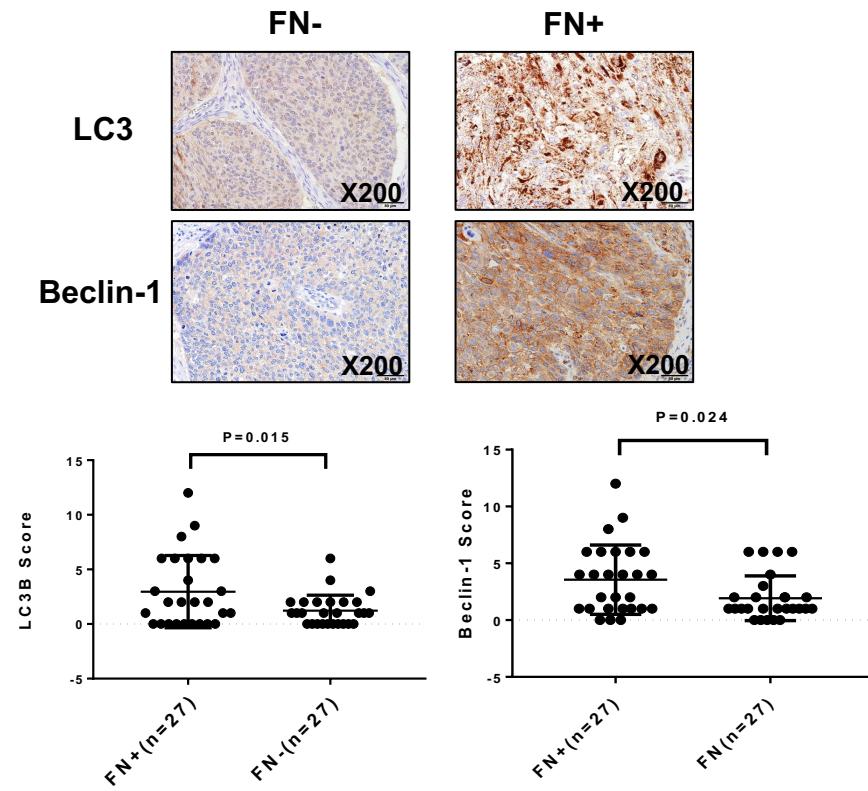

E

TE8

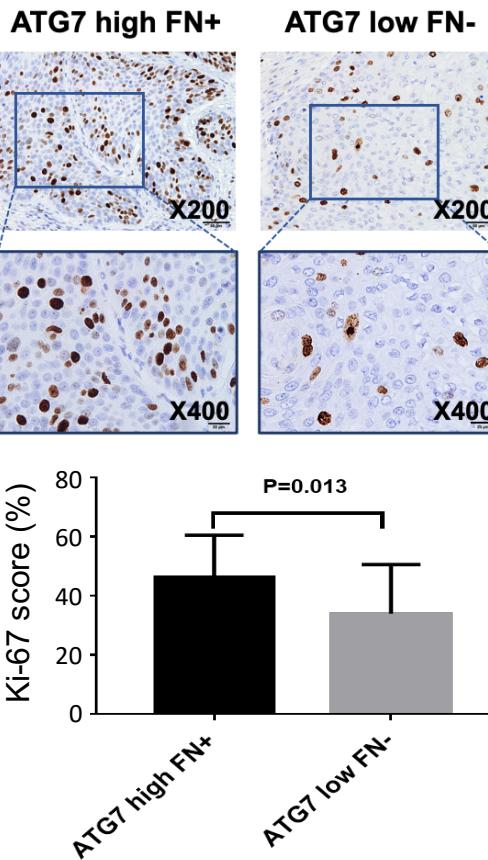

TE10

F

G

**E.** Cell proliferation assay in IncuCyte showing that CQ could decrease the growth of TE8 and TE10 in *F. nucleatum* group compared with that in only *F. nucleatum* group. \* P<0.05 (red and black) indicate significant difference between ctrl and *F. nucleatum* groups and CQ and CQ+ *F. nucleatum* groups.

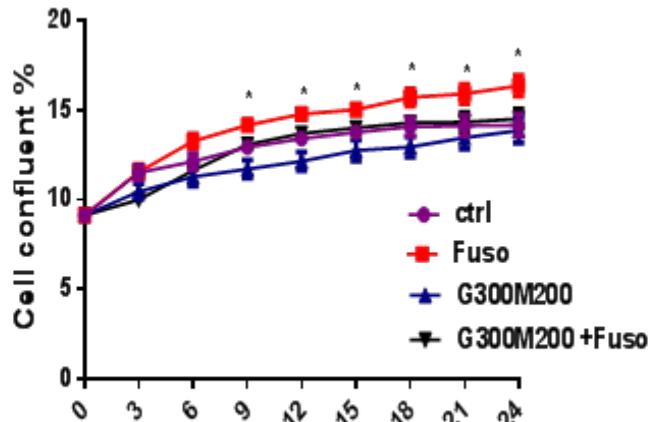

**F.** Immunohistochemical analysis of LC3 and Beclin-1 protein expression tumor lesions from ESCC patients. Higher LC3 and Beclin-1 score were observed in the *F. nucleatum* (+) group compared to the *F. nucleatum* (-) group (P=0.015 and P=0.024, respectively)

**G.** Immunohistochemical analysis of Ki-67 expression from ESCC patients' sample. Higher Ki-67 were observed in the ATG7 high *F. nucleatum* (+) group compared to the ATG7 low *F. nucleatum* (-) group (P=0.013).

**H**

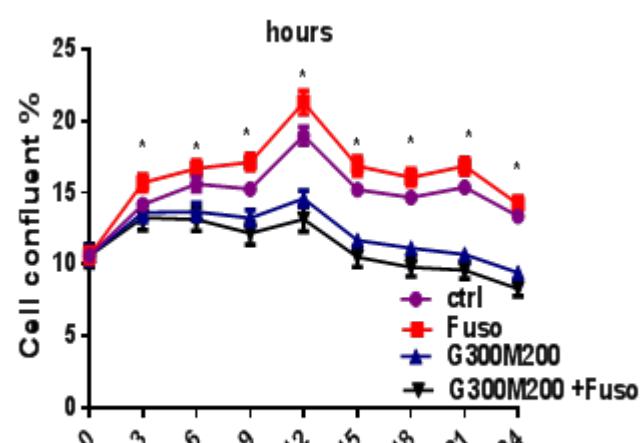

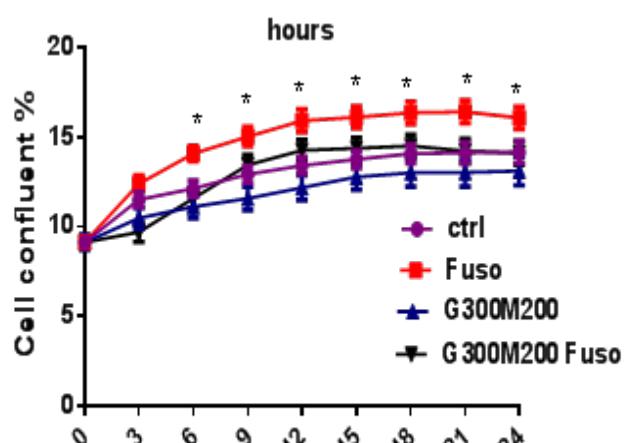

TE8

5-FU

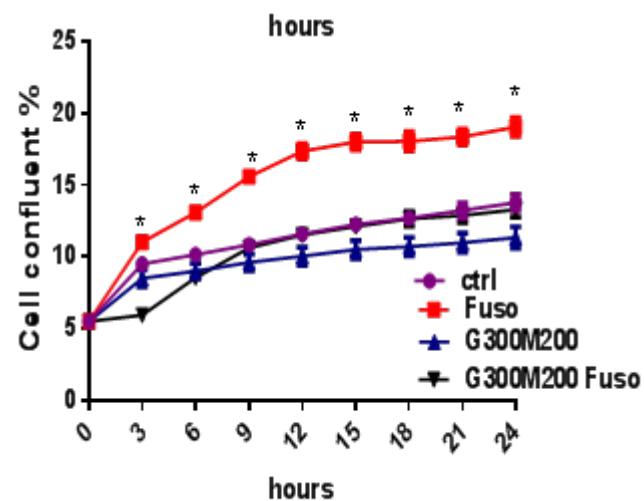

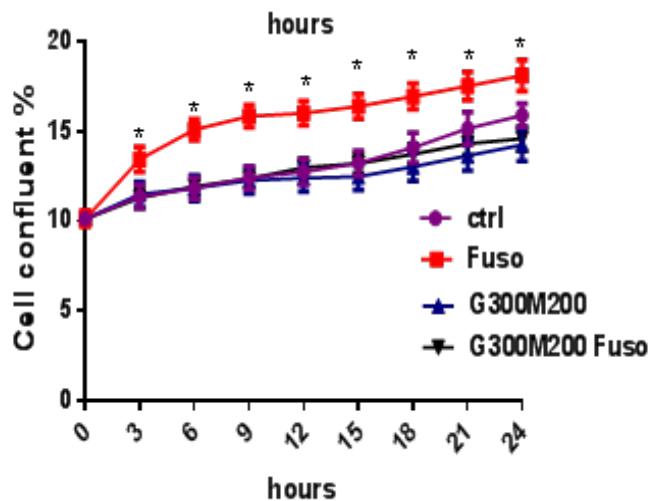

TE10

CDDP

Docetaxel

**H.** Cell proliferation assay in IncuCyte showing that gentamicin (300 µg/ml) and metronidazole (200 µg/ml) could decrease the growth of TE8 and TE10 in *F. nucleatum* group treated with 5-FU, CDDP, and Docetaxel. \* P<0.05 indicate significant difference between *F. nucleatum* group and *F. nucleatum* treated with gentamicin plus metronidazole group.
