

Supplementary Fig 7. Effect of 8 Weeks SSRI Treatment on Levels of Ether Phosphatidylcholines.

Mean(SE) concentration of etherphosphatidylcholines at baseline and week 8 for the “Remission” and “Treatment failure” groups were calculated. Solid green lines represent “Remission” group and dotted red lines represents “Treatment failure” group.

Abbreviations: SSRI: Selective Serotonin Reuptake Inhibitor, PC: Phosphatidylcholine. Metabolite abbreviations are spelled out in **Supplementary Table 1**.
