## Figure S1. Characterization of Lnc-MAP3K13-7:1

(A) General information of Lnc-MAP3K13-7:1. Lnc-MAP3K13-7:1 is on chromosome 3, and is the transcription of the forward strand.

(B) Full-length sequence of Lnc-MAP3K13-7:1 was determined by 5' and 3' rapid amplification of cDNA ends (RACE) assays. Top, Schematic diagram of how the RACE fragments are assembled in the contig of Lnc-MAP3K13-7:1. Left, gel electrophoresis images of PCR products from the 5'-RACE and 3'-RACE assays. Right, chromatograms of part of PCR products sequences, indicated the boundary between the primers and Lnc-MAP3K13-7:1 sequences.

(C) The full - length sequence of lnc-MAP3K13-7:1 transcript was 1483 nucleotide.

(D) BLAST results for the sequence of lnc-MAP3K13-7:1 transcript. Green, sequence from RACE. Grey, reference sequence from NONCODE. Red vertical bar, the mismatches between the two sequences, one bar indicates one nucleotide mismatch.

(E, F) Lnc-MAP3K13-7:1 has high evolutionary conservation in humans and fruit flies. The protein coding potential of lnc-MAP3K13-7:1 under several metrics, indicates that lnc-MAP3K13-7:1 is a non-coding RNA.

(G) Quantitative RT-PCR analysis of lnc-MAP3K13-7:1 expression ratio in nuclear and cytoplasm in untreated KGN cells using RNA cellular fractionation assay. ACTIN and U6 were used as cytoplasm RNA control and nuclear RNA control, respectively (n=4, mean  $\pm$  SD).
