

Figure S2. Principal coordinate analysis of Bray-Curtis dissimilarities among conventional mice associated with the first donor pair. Abx refers to the antibiotic control group following gavage with water. Circles (○) denote females and squares (□) denote males. Groups as denoted by color and text differed significantly in pairwise comparisons by ANOSIM (experimental $R = 0.78$, $P \leq 0.002$, Bonferroni-adjusted $\alpha=0.002$).
