Supplementary Fig 1.

Bar diagram showing read lengths of whole miRNAs in apical and basal spikelets of V1 (SR-159) and V2 (SR-157) during post anthesis (0, 5 and 10 days). All samples name are in figure inlay and distribution pattern in different colour bar diagram.

Supplementary Fig 2.

Distribution of 10 best matching families of miRNAs after homology search against *O. sativa* genome. All sequences ≥ 16 bp and ≤ 40 bp length were aligned to Rice genome using Bowtie-1.1.1 and miRbase-21.3 database through NCBI-Blast-2.2.30. MIR166 family is most abundant family identified followed by MIR812, MIR444 etc. All samples name are in figure inlay and distribution pattern in different colour bar diagram.
