

Supplementary Text S1 Inclusion criteria for the different analysis cohorts

A number of different inclusion criteria were defined for different study objectives.

Inclusion criteria for prevalence analysis cohort

The inclusion criteria for the prevalence analysis cohort required that patients: 1) were registered with a general practitioner (GP) practice for at least one day at any time between 1 January 2000 and 31 December 2016; 2) were considered “acceptable” according to Clinical Practice Research Datalink (CPRD) data quality criteria using the “Acceptable Patient Flag” variable in the patient file; and 3) came from a GP practice that was ‘up to research standard’ using the ‘up-to-standard’ (UTS) date in the practice file.

Inclusion criteria for demographic analysis cohort

The inclusion criteria for the demographic and outcomes analysis cohort required that patients: 1) were eligible for the prevalence analysis cohort, 2) had at least 365 days of follow-up before gastroparesis diagnosis, 3) had at least 365 days of follow-up after gastroparesis diagnosis.

Inclusion criteria for incidence analysis cohort

Patients included in the incidence cohort: 1) met criteria for the prevalence analysis cohort; 2) had at least 365 days of CPRD database registration before the cohort entry date, defined as the patient’s ‘Current Registration Date’ plus 365 days, and 3) did not have a history of gastroparesis within one year prior to cohort entry date.

Supplementary Text S2 Handling of patient deaths

Date of death in the CPRD was obtained from the patient file. This was generated using a specific CPRD algorithm, which included: information on the recorded death date for a patient in the patient file; the transfer out date in the patient file with transfer out reason as “death”; the event date in the Clinical/Referral file with Read code indicating “death”; and the event date with “death administration” for entity type (enttype = 148) in the Additional file (online supplementary table S5). In patients with linkage to the HES–ONS death registry, variable “dod”, for date of death, will also be used to determine vital status and death date for a patient.

Supplementary Table S1 Medcodes and Read codes for gastroparesis cohort definition

Medcode	Read code ^a	Read term
28776	J16y900	Delayed gastric emptying
34364	J16y600	Gastric atonia
35300	J16y800	Gastric dysmotility

^aRead codes act as a coded thesaurus of clinical terms and have been used in the National Health Service since 1985,¹ and now form the standard clinical terminology system used in GP practices in the UK.

^aThere are instances in the CPRD Code Browser when a Read code has a missing Read term. Read codes with missing descriptions stem from the fact that CPRD receives periodic updates on the list of available Read codes and descriptors, and therefore there may be new codes added and utilised by the GP that do not yet have descriptors. Read codes with missing descriptors tend to be relatively new to the database, with few events associated with them.

GP, general practitioner; NHS, national health service; NOS, not otherwise specified; SMS, short message service.
