Table S1. Longitudinal changes in HbA1c and body weight in patients treated with dulaglutide 1.5mg/once weekly as add-on to MET or MET plus conventional insulin secretagogues.

Changes	6 Months (N = 89)	12 Months (N = 77)	18 Months (N = 65)	p Value (6 vs. 12 months)	p Value (6 vs. 18 months)
HbA1c, %	-0.85 (1.17)	-0.85 (1.25)	-0.75 (1.49)	0.443	0.423
Body weight, %	-2.0 (4.3)	-1.7 (4.7)	-1.3 (4.8)	0.227	0.091
Body weight, kg	-2.8 (9.8)	-1.7 (4.5)	-1.4 (4.5)	0.366	0.087

Data are presented as means (SD). Paired data were compared by using the Wilcoxon signed-rank test. Missing values were handled by excluding cases per dependent variable. Longitudinal changes were calculated with respect to baseline values, as absolute (HbA1c) or relative (body weight) percentage differences. MET: metformin; SD: standard deviations.

Table S2. Baseline characteristics of frequency-matched groups (N = 54 both) naïve to GLP-1 RA who were treated with dulaglutide (DU) 1.5 mg/once weekly or liraglutide (LIRA) 1.2–1.8mg/once daily as add-on to metformin or metformin plus conventional insulin secretagogues for a minimum of 18 months. Matching criteria included age, gender, T2D duration, degree of glycemc impairment, cardiovascular comorbidities, and background medications.
