

SUPPLEMENTARY FIGURE S1 Western blots probed with starch enzyme antibodies. (A) starch synthase SS1. (B) starch branching enzyme SBE1. E, embryo; S, scutellum; R, rest of grain; M, marker; Rec, recombinant protein control. Numbers in lane labels refer to germination time, i.e., S24 is scutellum tissue 24 h into germination. Numbers on the sides of the gel give kDa masses for marker bands and bands of interest.
