24	52	LCO	9.6–8.5	4.60	0.353	Pipeline 4–20	1.02506874	A2	A3	4	8	1	<3	

Note:—RICA indicates right internal carotid artery (ICA); RCO, right ICA ophthalmic segment; LMCA, left middle cerebral artery; LICA, left ICA; LV, left vertebral; Pre, pre-operative; Post, post-operative; hyp, ICA hypophyseal segment; OKM, O’Kelly Marotta scale.

^a Calculated by the first arrival of the contrast inside the aneurysm until complete washout after a maximum 13 seconds.

^b “<” means complete thrombosis of the aneurysm; “>,” incomplete thrombosis; and the number represents the maximum follow-up observed.

^c For patients 12, 15 and 20, the MAFA ratio calculation could not be achieved.
