Supplementary Information

Supplementary Figure S1: Infected HUVECs were visualized by confocal laser scanning microscopy. At 1 hpi, bacteria are localised inside vacuolar compartments (indicated by arrows). Cells were stained with LIVE/DEAD cell viability stain (propidium iodide, red, and SYTO9, green). Scale bars indicate 20 μ m. Samples from 16 hpi can be found in Figure 2C.

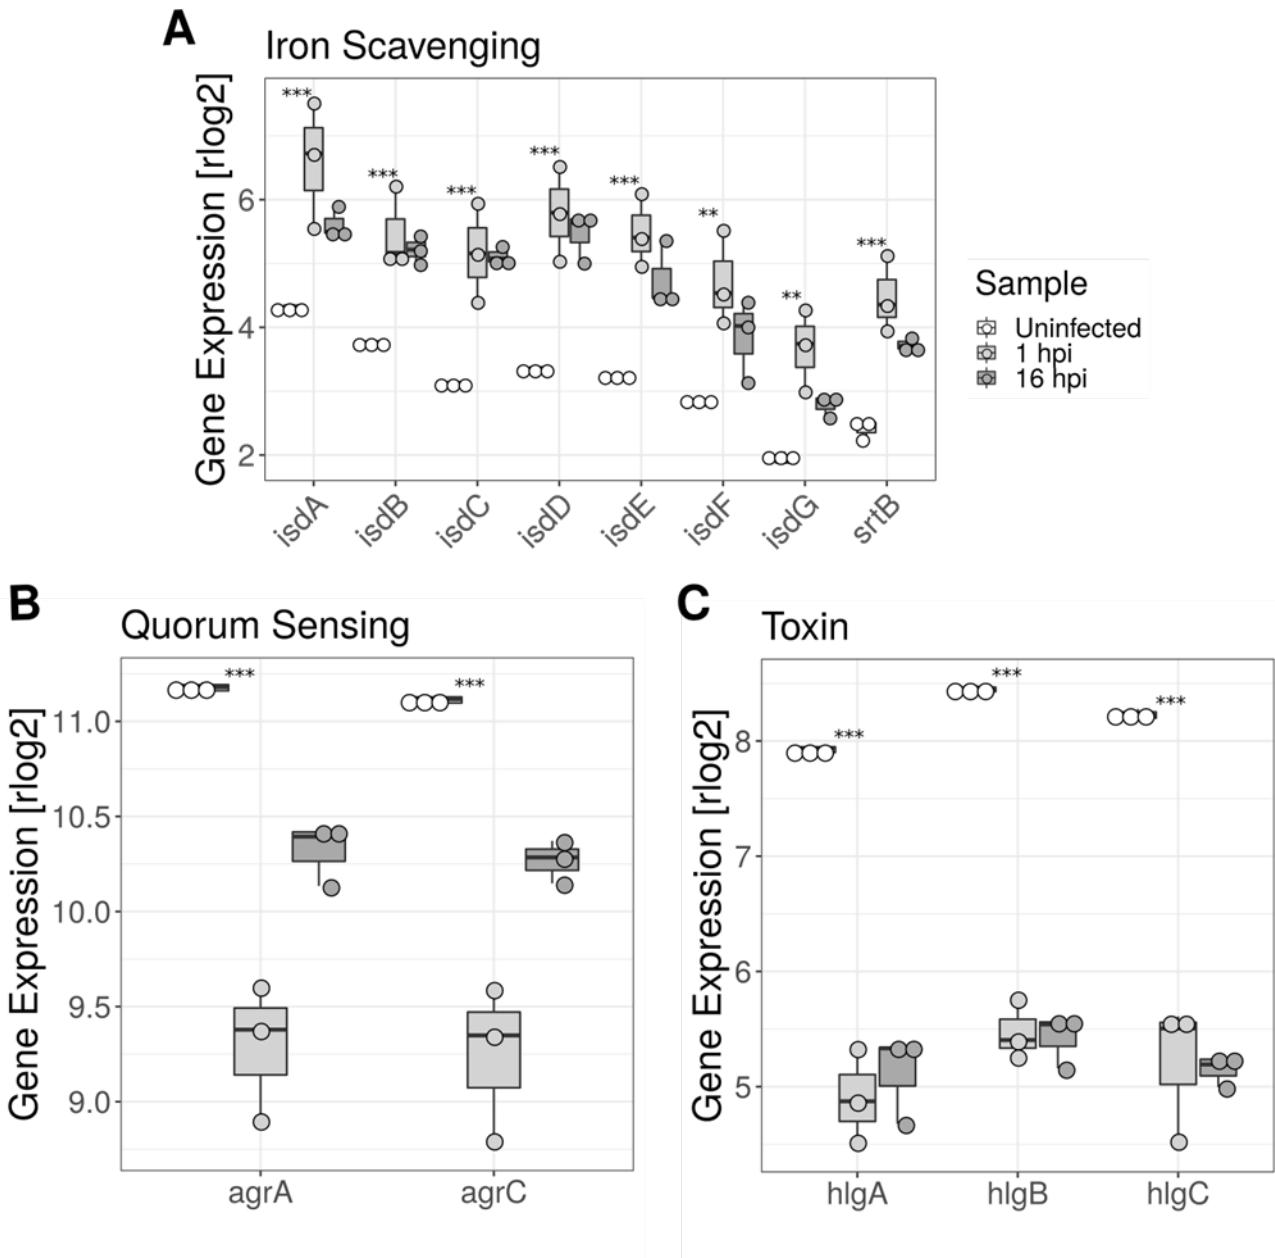

Supplementary Figure S2: Total coverage depth mapped to the triplicates of the bacterial inoculum, the uninfected HUVECs, 1 hpi, and 16 hpi. The reads were mapped to either the bacterial genome (NC_007795.1, in blue) or the human genome (GRCh38.84, in green).

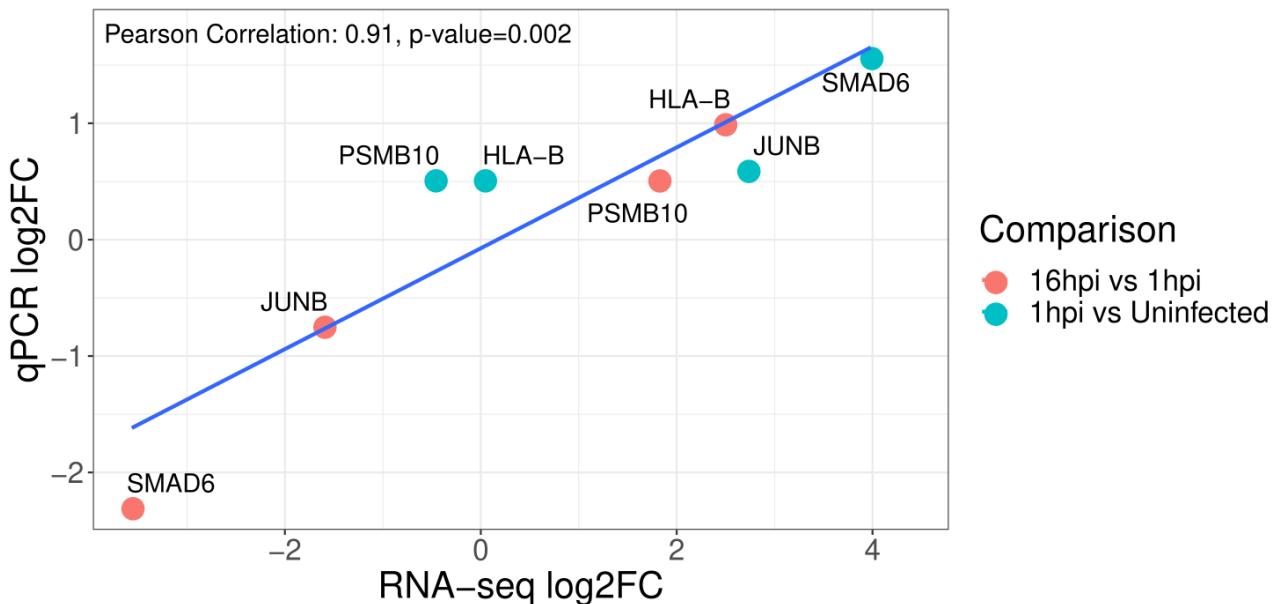

Supplementary Figure S3: Using logFC shrinkage to penalize low coverage for *S. aureus* between the two comparisons (1 hpi vs. inoculum (top panels) and 16 hpi vs 1 hpi (bottom panels)). Differentially expressed genes for *S. aureus* above the threshold before (left panels) and after logFC shrinkage (right panels) are marked in red.

Supplementary Figure S4: Using logFC shrinkage to penalize low coverage for HUVECs between the two comparisons (1 hpi vs. uninfected (top panels) and 16 hpi vs 1 hpi (bottom panels)). Differentially expressed genes for HUVECs above the threshold before (left) and after logFC shrinkage (right) are marked in red.

Supplementary Figure S5: Examples of differentially expressed genes related to iron scavenging (Isd), quorum sensing (agr), and toxins (γ -hemolysin, hlg) at different time-points. *p<0.05, **p<0.01, ***p<0.001.

Supplementary Figure S6: Pearson correlation between RNAseq and qPCR in the two comparisons (red and blue for 16 hpi vs. 1 hpi and 1 hpi vs. uninfected, respectively) for 4 selected human genes (HLA-B, JUNB, SMAD6, PSMB10). Due to low signal, it was not possible to perform a meaningful comparison for the bacterial genes.

For qPCR, RNA was purified by first lysing the cells with FastPrep FPI20 followed by hot-phenol treatment. The samples were then treated with NEB DNase I kit (New England Biolabs) to remove DNA. For each 180 ng of RNA, 0.2 units of DNase I was added and incubated for 10 min at 37 °C. The DNase I was inactivated at 75 °C for 10 min. cDNA was synthesized using the High Capacity cDNA Reverse Transcription kit (K1671, Thermo Scientific). The samples were then processed in the PCR machine using 25 °C for 10 min, 37 °C for 60 min, 85 °C for 5 min followed by a hold at 4°C. qPCR was performed in a 384-well plate in duplicates. RealQ Plus 2x Master Mix Green (A323406, Ampliqon) was mixed with approx. 10 ng cDNA, 750 nM forward primer, and 750 nM reverse primer (see Supplemental table 4 for primers). The samples were amplified in a LightCycler480 using: pre-incubation at 95°C for 15 min, 45 cycles of 95°C for 15 s, 60°C for 45 s, and 72°C for 45 s. The cycling was followed by a hold at 95°C for 5 s, hold at 60°C for 20 s and a continuous melt from 60°C to 97°C ramping 0.11°C/s with 5 acquisitions per degree. The expression of the human genes was normalized to the human housekeeping gene B2M, while the expression of the bacterial genes was normalized to the housekeeping gene gyrB.

Supplementary Table S3

Two tables containing the HUVEC genes from Cluster 1 and 2 from the functional enrichment analysis that have been mapped to the Reactome Pathway database.

HUVEC Cluster 1

| Cluster | ID | Description | GeneRatio | BgRatio | pvalue | p.adjust | qvalue | geneID | Count |
|-----------|---------------|--|-----------|-----------|-------------|-------------|-------------|--------------------------|-------|
| Cluster 1 | R-HSA-9006936 | Signaling by TGF-beta family members | 5/45 | 102/10619 | 6.67311E-05 | 0.013234824 | 0.010745291 | 6498/4091/9241/4092/3726 | 5 |
| Cluster 1 | R-HSA-112409 | RAF-independent MAPK1/3 activation | 3/45 | 23/10619 | 0.000118698 | 0.013234824 | 0.010745291 | 1844/1843/1847 | 3 |
| Cluster 1 | R-HSA-201451 | Signaling by BMP | 3/45 | 28/10619 | 0.000216338 | 0.016081155 | 0.013056213 | 4091/9241/4092 | 3 |
| Cluster 1 | R-HSA-5675222 | Negative regulation of MAPK pathway | 3/45 | 40/10619 | 0.000629679 | 0.035104632 | 0.028501282 | 1844/1843/1847 | 3 |
| Cluster 1 | R-HSA-2173793 | Transcriptional activity of SMAD2/SMAD3:SMAD4 heterotrimer | 3/45 | 44/10619 | 0.000834151 | 0.037203142 | 0.030205053 | 6498/4092/3726 | 3 |

HUVEC Cluster 2

| Cluster | ID | Description | GeneRatio | BgRatio | pvalue | p.adjust | qvalue | genelD | Count |
|-----------|---------------|--|-----------|-----------|-------------|-------------|-------------|--|-------|
