Supplementary Figure 1. The percent of uniquely mapped reads (mapping efficiency) of samples to the reference genome ranged from 43% to 86%. Figure is created by the author using Microsoft Excel (URL: <https://www.microsoft.com/en-us/microsoft-365/excel>).

Supplementary Figure 2. 6-way Venn diagram of upregulated (**Panel A**)/ downregulated (**Panel B**) differentially expressed genes (DEGs) with a fold change ≥ 2 , and FDR cut-off of 0.05, in the survivor and non-survivor groups, for days 1, 2, 3 versus baseline. The six groups are color coded to denote significantly expressed genes within each group and overlap across groups. Venn diagram data was processed using R (version 4.0.3, URL: <https://cran.r-project.org/>) and generated using an online tool (<http://bioinformatics.psb.ugent.be/webtools/Venn/>)
