Survey Questionnaire

The survey tool contained 63 questions divided into five sections, assessing COVID-19 vaccine acceptance and confidence, negative experiences with COVID-19, perception on the risk of COVID-19, public trust, general vaccine attitude, as well as demographics and socioeconomic status. Questions included a mixture of open ended-questions, dichotomous yes/no questions, and multiple-choice questions. Responses to multiple-choice questions measured agreement with 5- or 7-point Likert scales. Section One collected basic participant demographics, including age, race, marital status, number of children, and pregnancy status. Section Two collected information regarding COVID-19, such as exposure, essential worker status, health insurance, underlying health conditions, how worried they are about the virus, their own risk, and the risk to their child/children. Section Three assessed the impact of COVID-19 pandemic, including social, financial, loss of a loved one, or non-COVID-19 related health problems. Section Four assessed the respondents' vaccine acceptance, vaccine confidence, and factors influencing decision-making. Section Five assessed social cohesion, trust, and satisfaction. Participant responses were submitted directly through the website, and no personal identifiers were collected. Participants were allowed to skip any questions or withdraw from the survey at any time without penalty. No follow-up was conducted.

Figure S1: Importance of a COVID-19 vaccine among global pregnant women and mothers of young children

a) Importance for the country where respondents currently live to have a COVID-19 vaccine (n=17769)

b) Importance for a majority of people in the country where respondents currently live to get vaccinated for COVID-19 (n=17761)

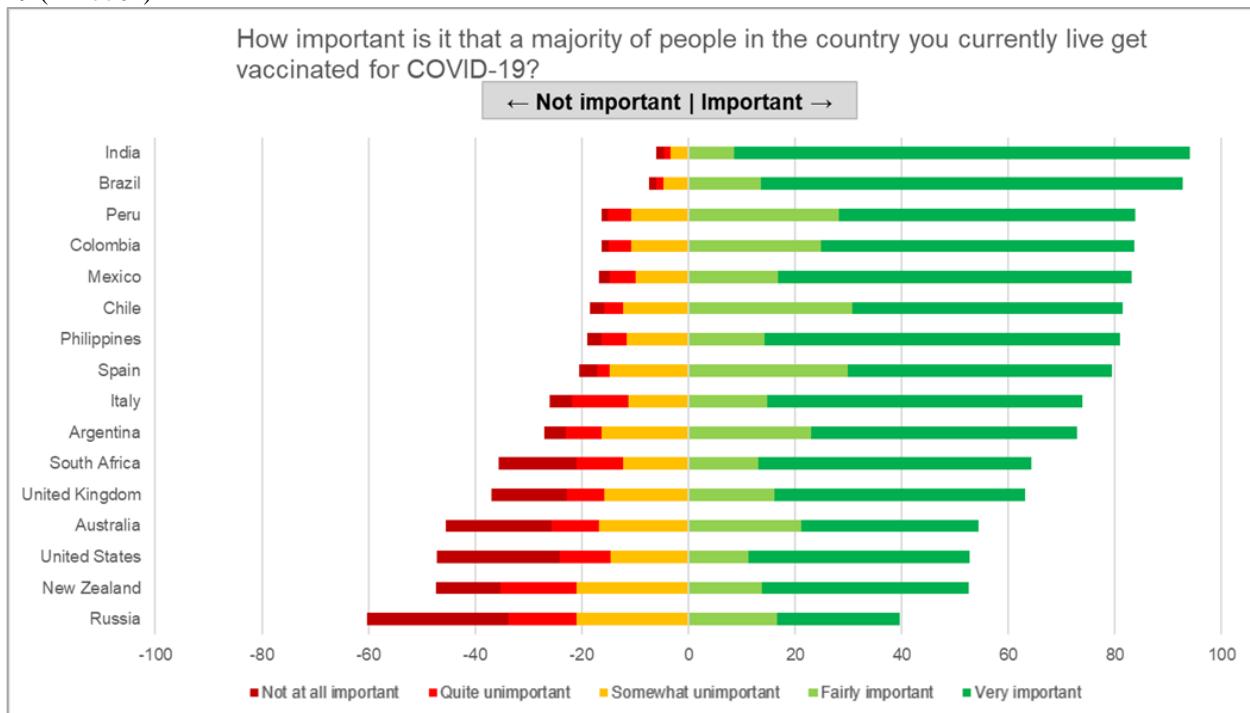

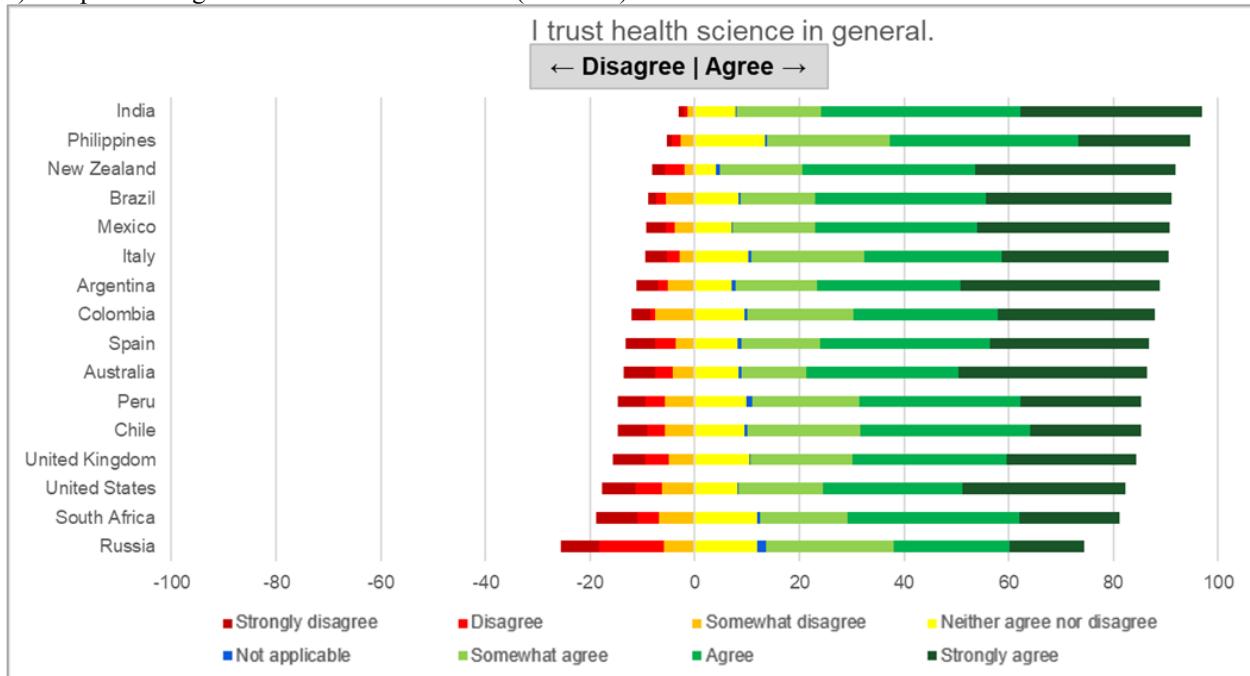

Figure S2: Trust in science among global pregnant women and mothers of young children

a) Respondents' general trust in health science (n=17837)

b) Respondents' general increased trust in health science during the COVID-19 pandemic (n=17837)

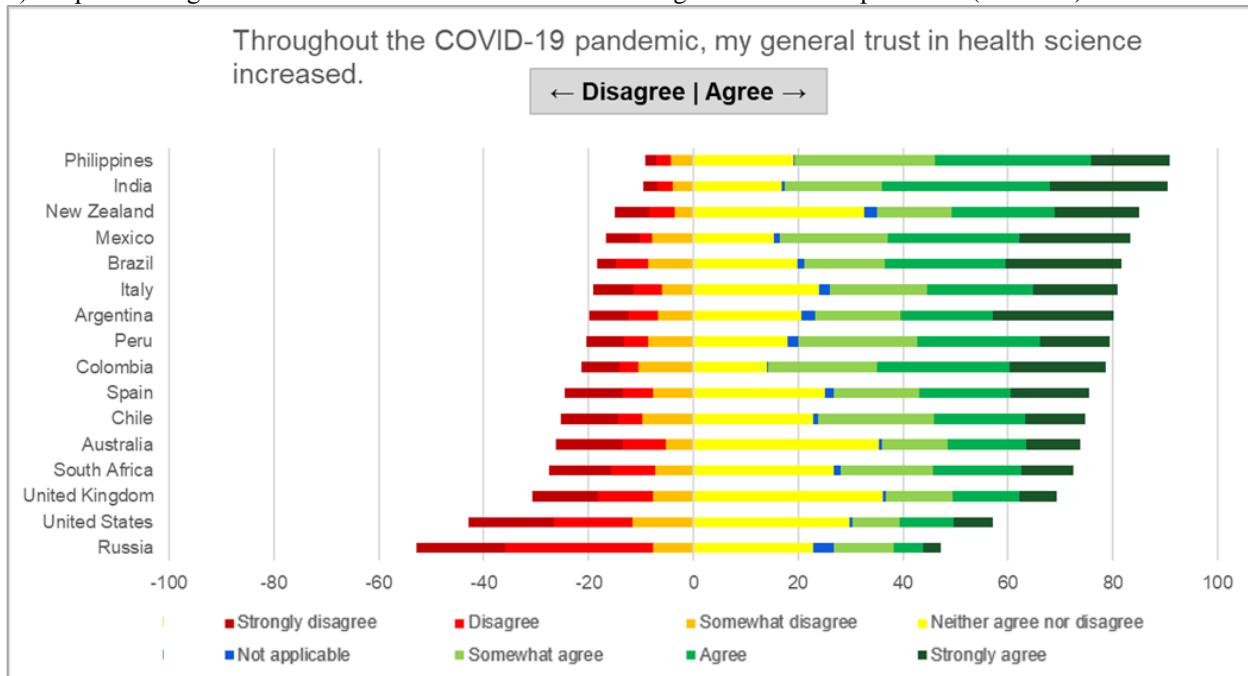

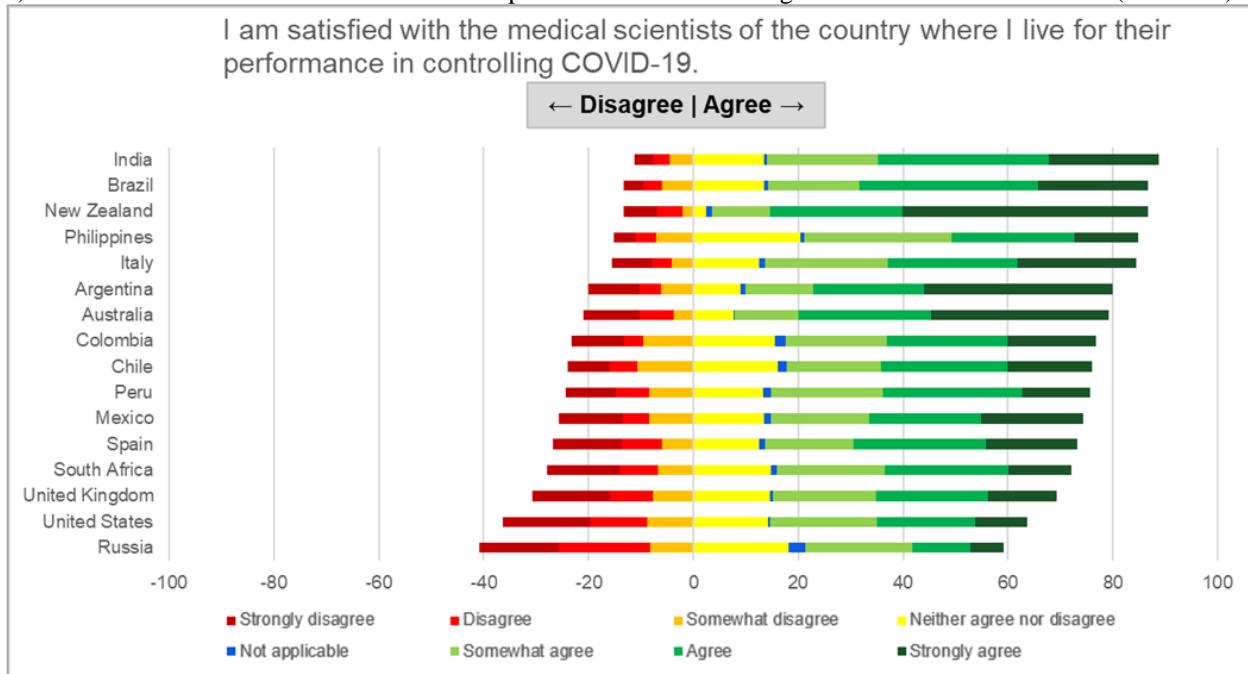

Figure S3: Satisfaction with COVID-19 control among global pregnant women and mothers of young children

a) Satisfaction with medical scientists for their performance in controlling COVID-19 in their countries (n= 17837)

b) Satisfaction with health authorities for their performance in controlling COVID-19 in their countries (n= 17837)

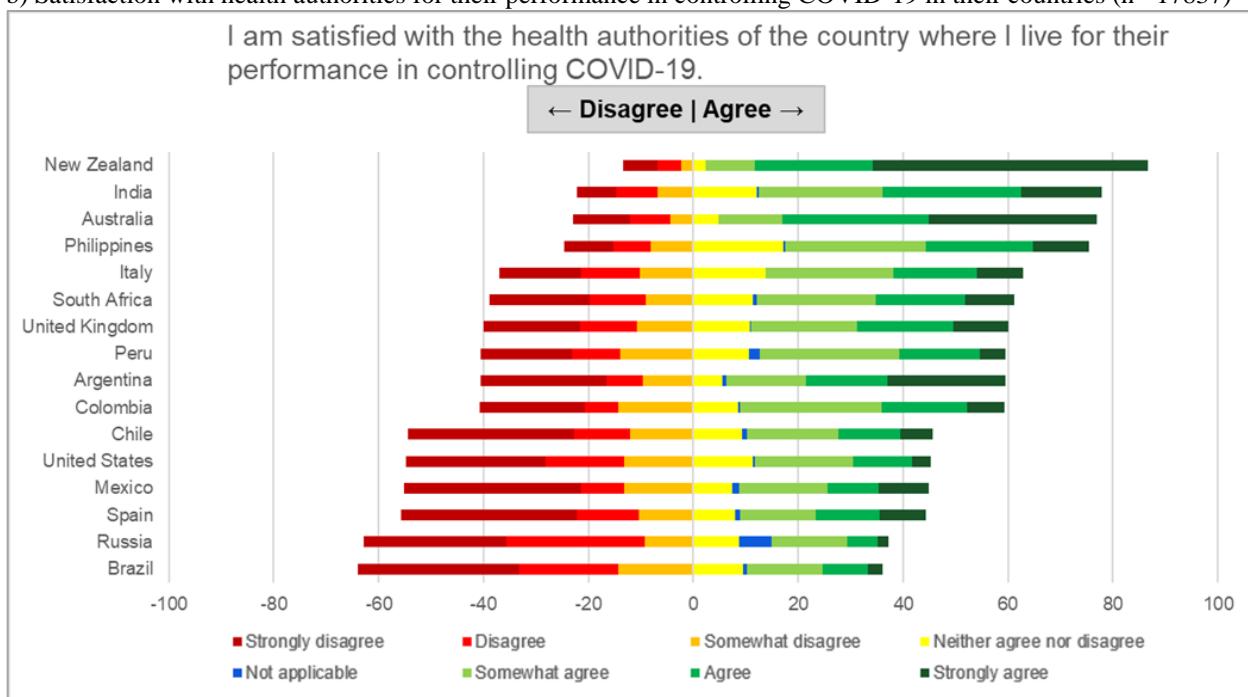

Figure S4: Information COVID-19 and vaccine development among global pregnant women and mothers of young children

a) Respondents' feelings of how informed they are about COVID-19 and vaccines being developed (n=17747)

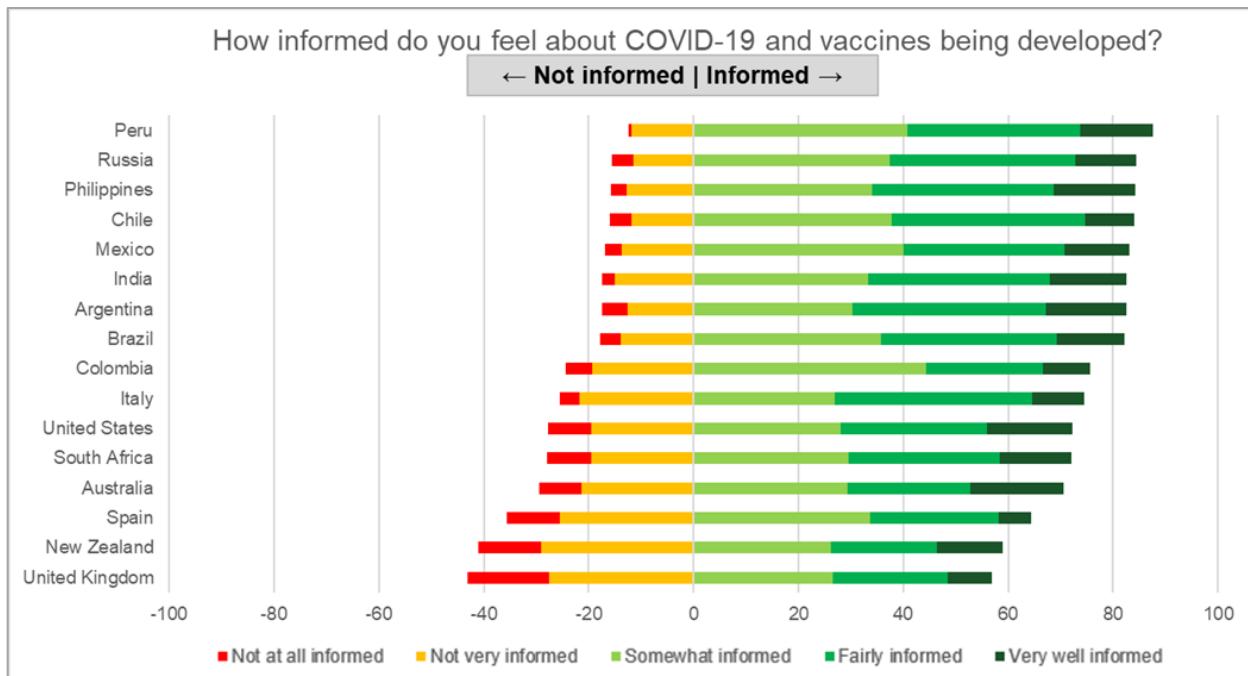

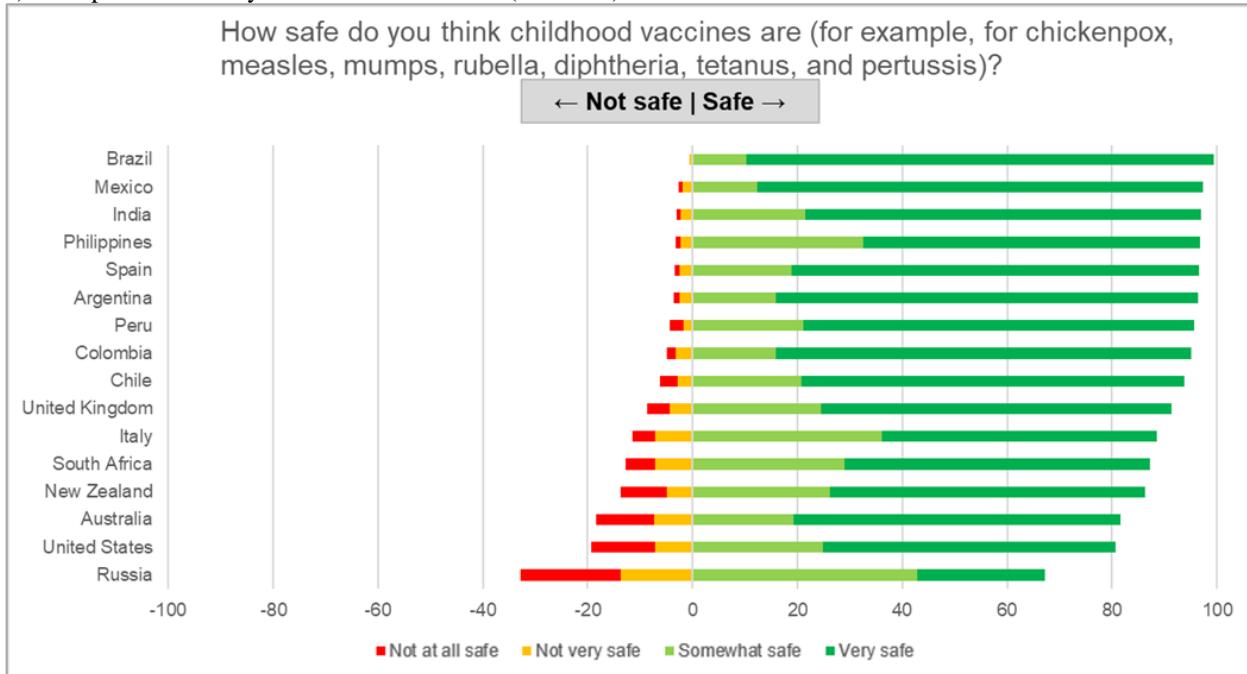

Figure S5: Perceptions on childhood vaccines among global pregnant women and mothers of young children

a) Perceptions on safety of childhood vaccines (n=17840)

b) Perceptions on effectiveness of childhood vaccines (n=17839)

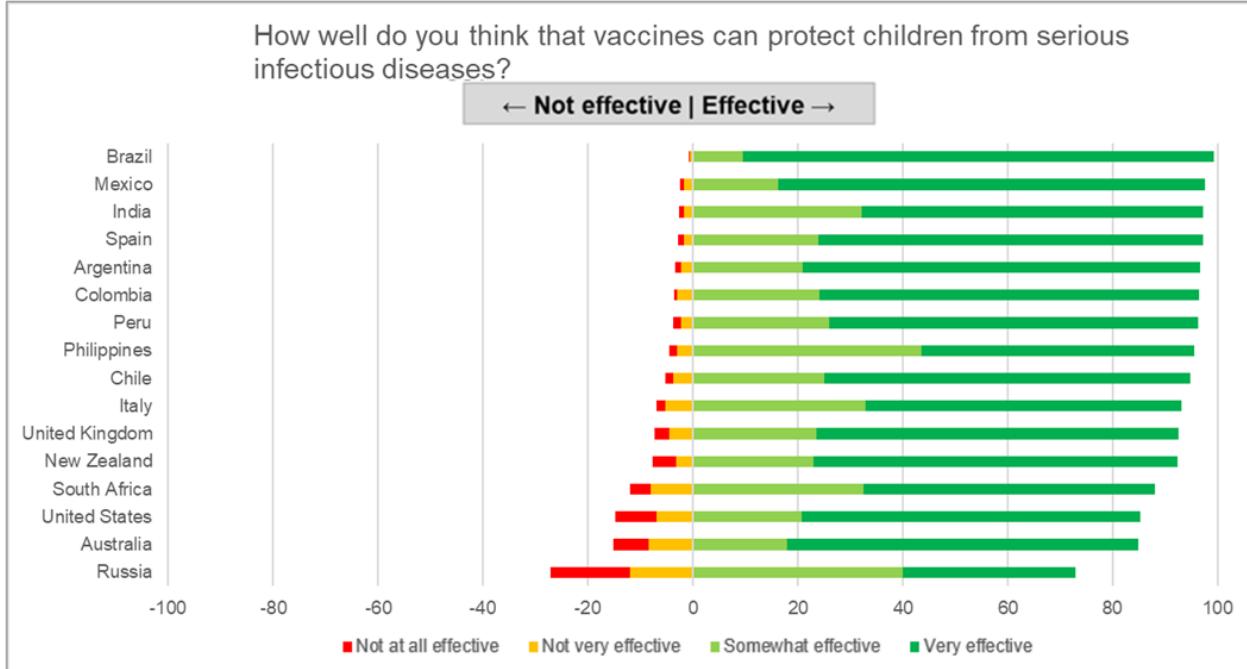

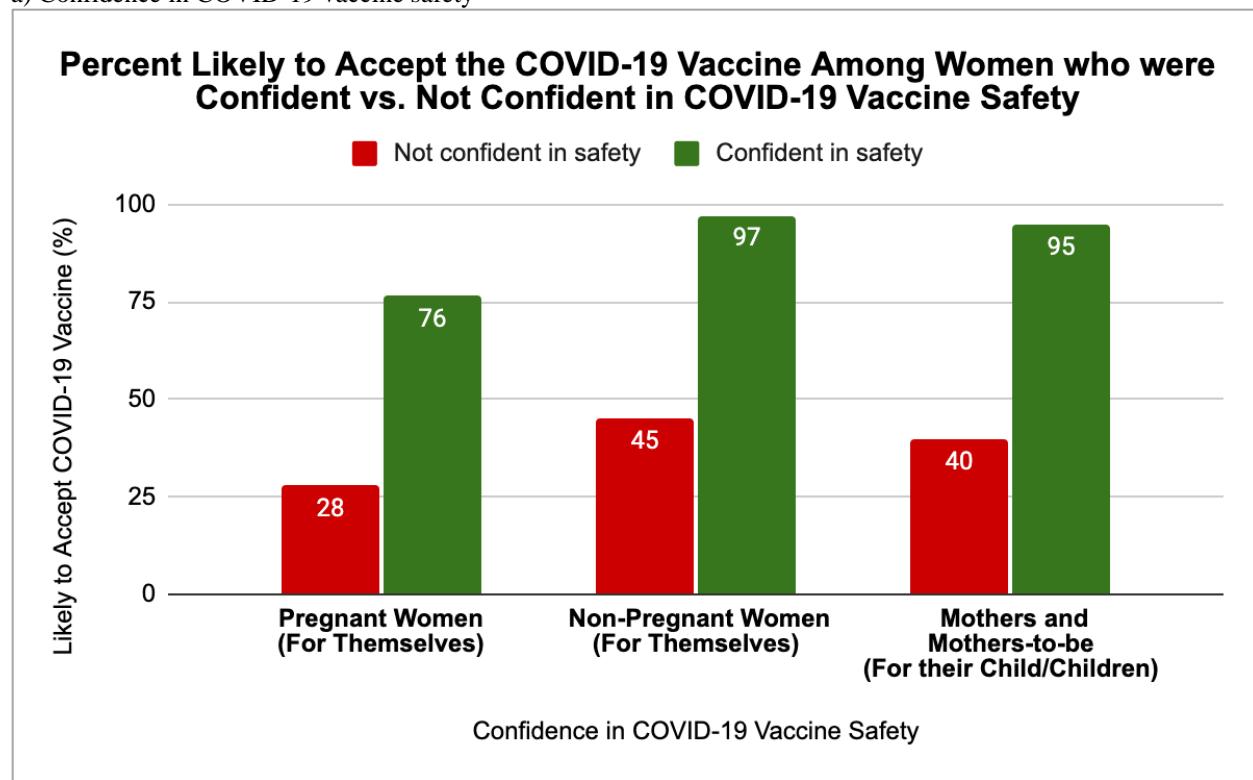

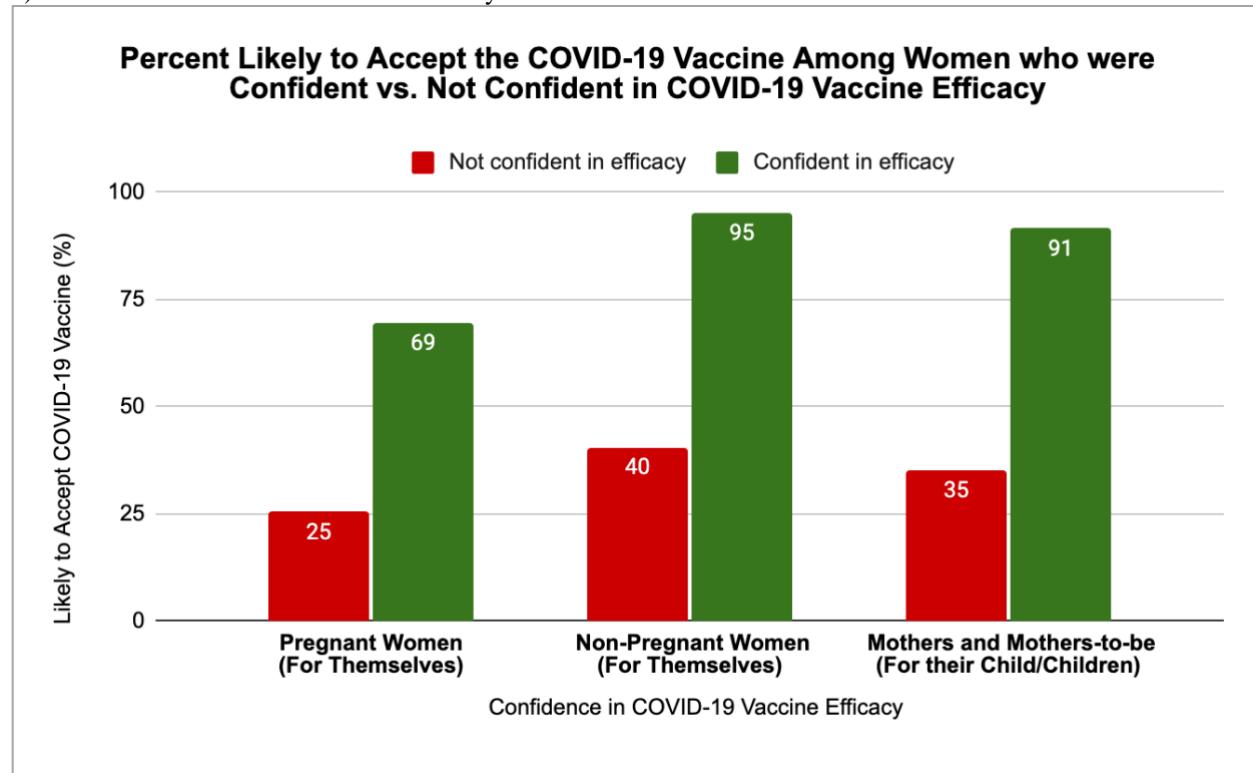

Figure S6: Key predictors of vaccine acceptance among pregnant women, non-pregnant women, and mothers/mothers-to-be

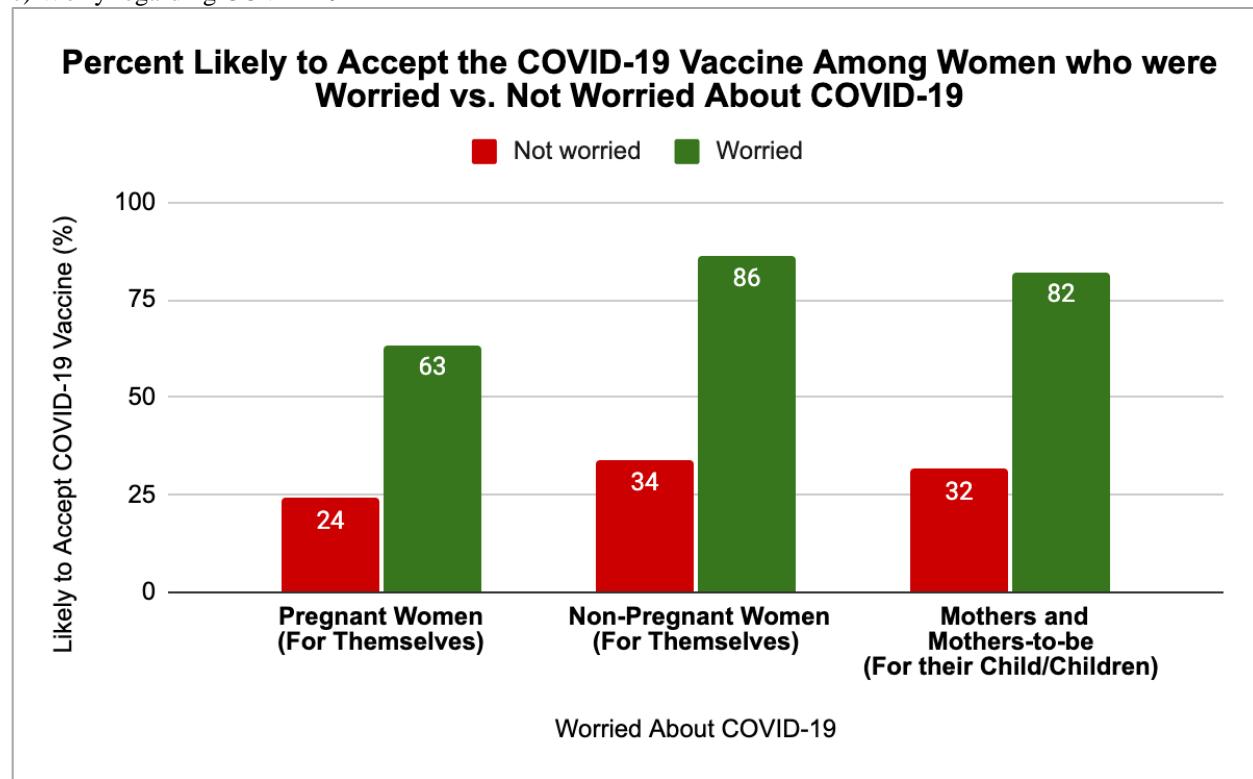

a) Confidence in COVID-19 vaccine safety

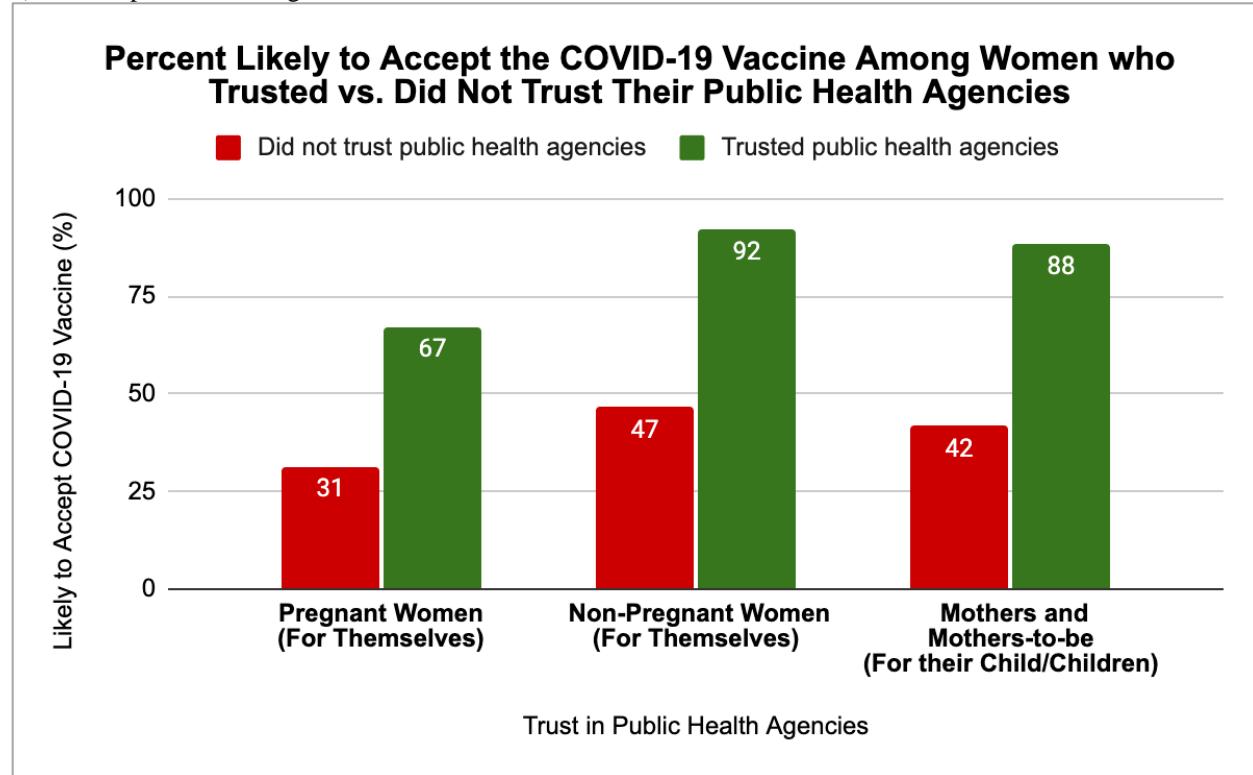

b) Confidence in COVID-19 vaccine efficacy

c) Worry regarding COVID-19

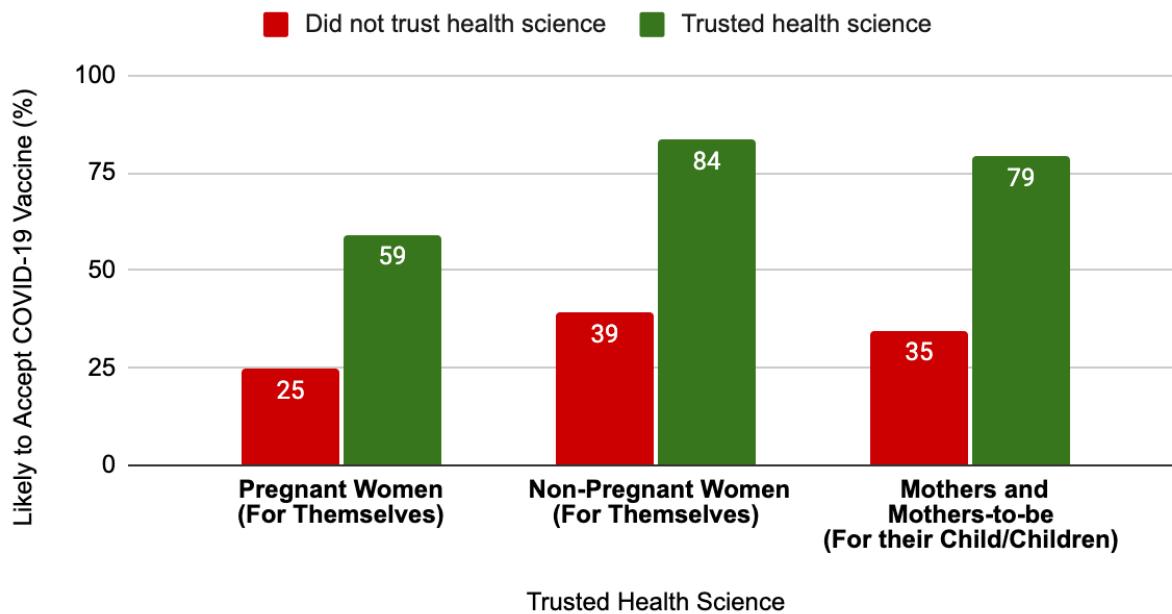

d) Trust in public health agencies

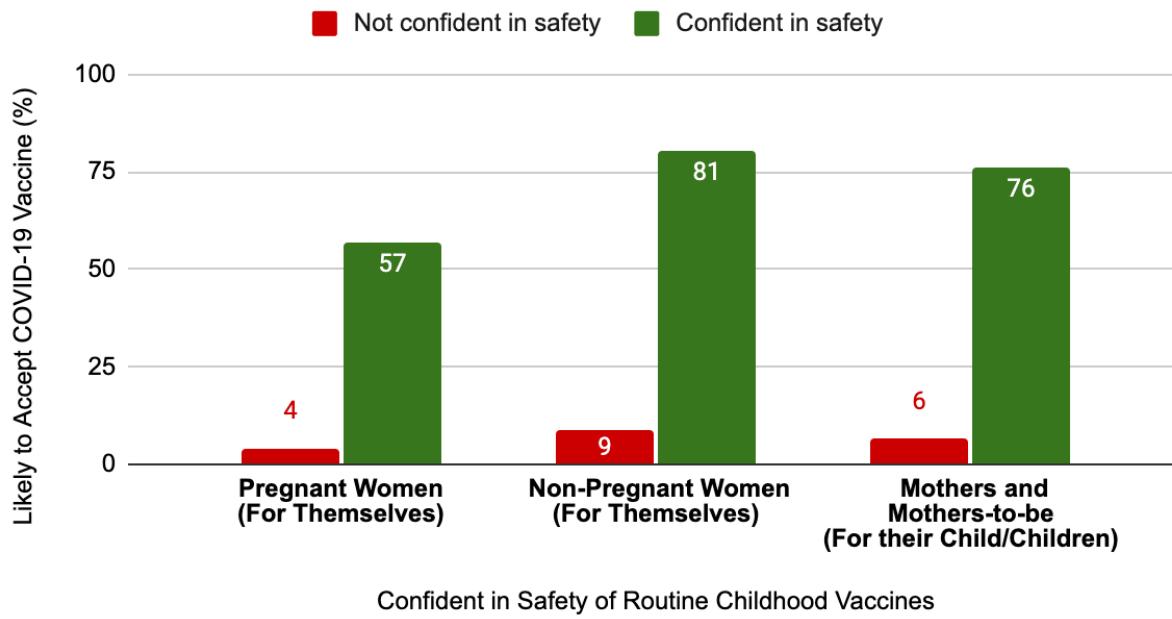

e) Trust in health science

Percent Likely to Accept the COVID-19 Vaccine Among Women who Trusted vs. Did Not Trust Health Science

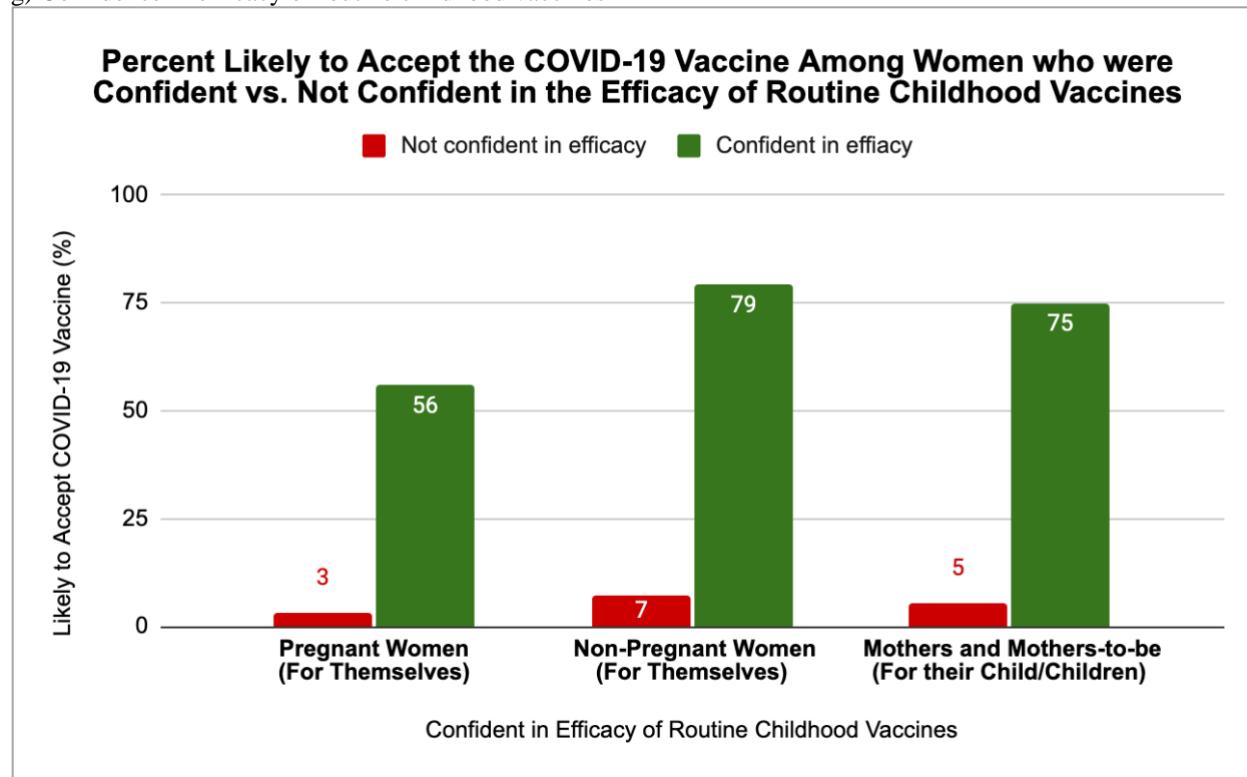

f) Confidence in safety of routine childhood vaccines

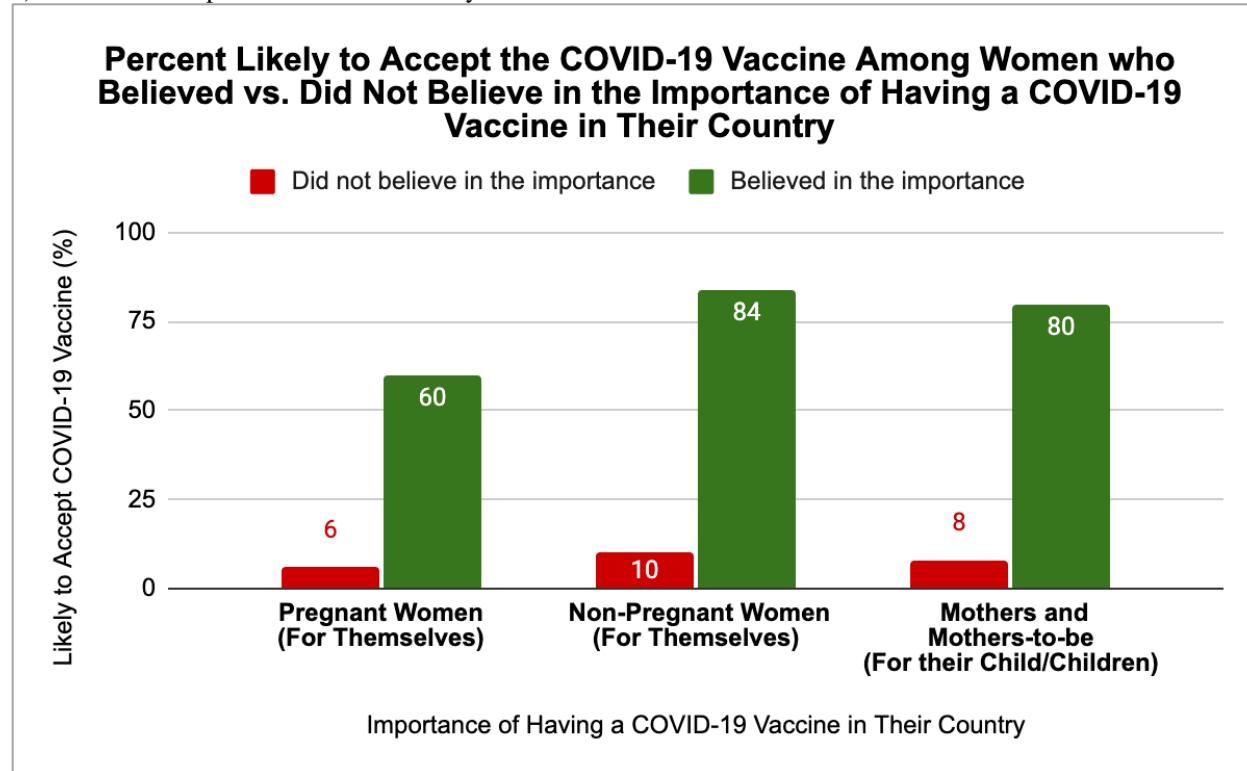

Percent Likely to Accept the COVID-19 Vaccine Among Women who were Confident vs. Not Confident in the Safety of Routine Childhood Vaccines

g) Confidence in efficacy of routine childhood vaccines

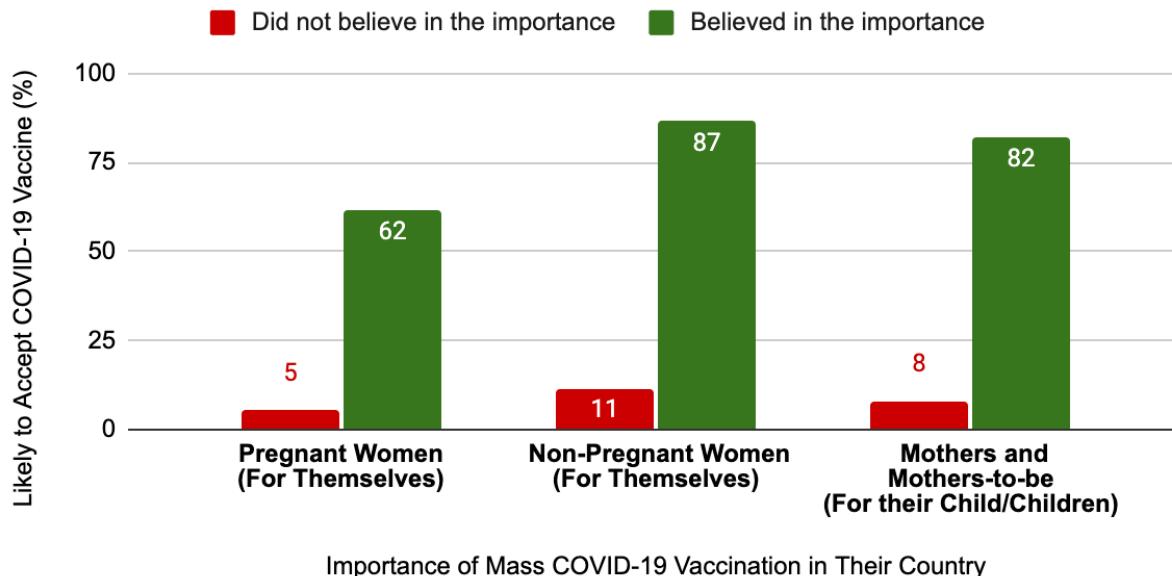

h) Belief in the importance for their country to have a COVID-19 vaccine

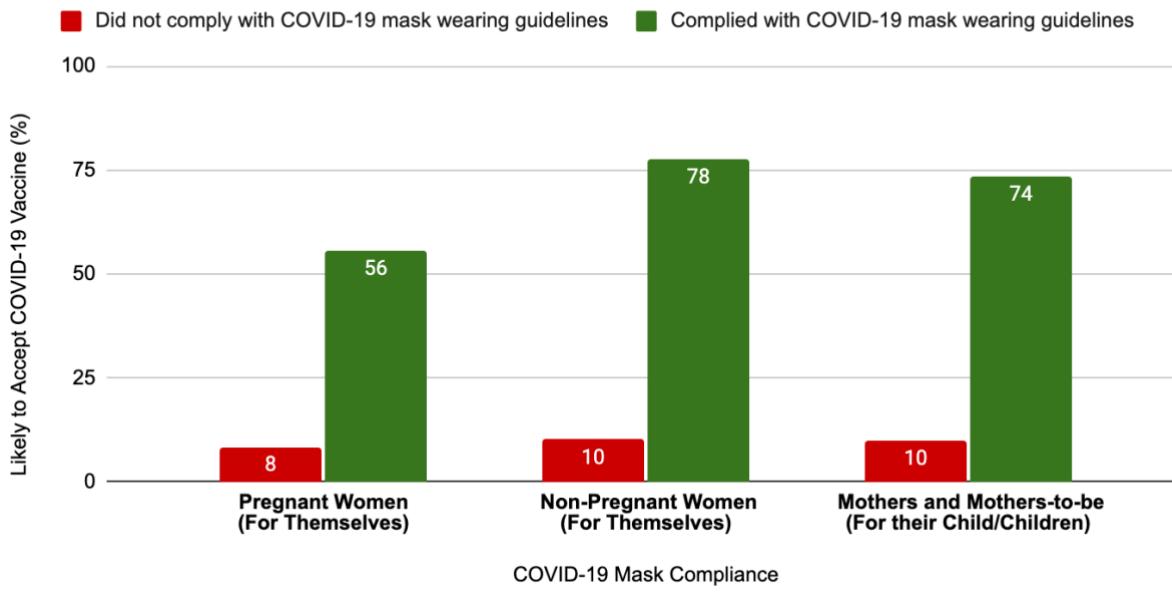

i) Belief in the importance of mass COVID-19 vaccination in their own country

Percent Likely to Accept the COVID-19 Vaccine Among Women who Believed vs. Did Not Believe in the Importance of Mass COVID-19 Vaccination in Their Country

j) Compliance with face mask wearing guidelines

Percent Likely to Accept the COVID-19 Vaccine Among Women who Complied vs. Did Not Comply With COVID-19 Mask Wearing Guidelines

k) Monitoring of COVID-19 news and media

Percent Likely to Accept the COVID-19 Vaccine Among Women who Monitored vs. Did Not Monitor COVID-19 News

*For variables where categories or observations do not add up to 17871, they were the result of missing responses from participants for the corresponding questions on the survey

† Race/ethnicity adds up to more than 17871 because respondents were allowed to identify with more than one race/ethnic group, which is why the percentages were not reported

Table 2S: “Big 7” predictors of vaccine acceptance for 16 countries among global pregnant women and mothers of young children

Association between Exposure Variables and Vaccine Acceptance among Non-Pregnant Women (Likely vs. Unlikely)	United States (N=2004; 53% Likely)	Argentina (N=1422; 79% Likely)		Brazil (N=298; 92% Likely)		Chile (N=360; 79% Likely)		Colombia (N=467, 86% Likely)		Mexico (N=837; 92% Likely)		Peru (N=312, 80% Likely)		South Africa (N=617, 67% Likely)
