

Every Newborn BIRTH multi-country validation study: informing measurement of coverage and quality of maternal and newborn care

Stillbirths including intrapartum timing: EN-BIRTH multi-country validation study

Additional File 7: Barriers and enablers to routine recording of birth outcomes, EN-BIRTH study

This figure illustrates the overall barriers and enablers to facility-based data collection identified by EN-BIRTH participants. The bold text are the issues specific to birth outcome. The transition from red to green is a reminder that most factors identified by participants could serve as either a barrier or enabling factor depending on the facility-level resources and management
