

Figure S3. Uptake of ¹⁴C-labeled L-lactate into *jen1Δ ady2Δ* yeast over time at pH 6.8 and a 1 mM inward gradient. Shown are curves for BSG Ig-I/C2 E(27)R (▽) and BSG var2 E(27)R (△). The data were normalized to 1 mg of cells and the background of non-expressing cells was subtracted. Error bars indicate ± S.E.M. from three biological replicates.
