

## Supplementary Figures

**Supplementary Figure 1. Development of transgenic lines of tobacco overexpressing *Agave americana* PHOSPHOENOLPYRUVATE CARBOXYLASE (*AaPEPC1*). (a)** Schematic representation of the DNA construct developed for the overexpression of *AaPEPC1* in transgenic tobacco. CaMV35S: cauliflower mosaic virus 35S; NOS: nopaline synthase; KanR: kanamycin resistance gene as a selection marker for screening transgenic plants; “LB” and “RB”: the left and right borders of T-DNA, respectively. The image was generated with SnapGene software (<http://www.snapgene.com/>). **(b)** Quantitative reverse transcription PCR (qRT-PCR) analysis to detect the expression of *AaPEPC1* in transgenic plants expressing *AaPEPC1* (OE1, OE2), empty vector (EV), and wild-types (WT).

**Supplementary Figure 2. Chlorophyll relative content in the leaves of transgenic plants expressing *Agave americana* PHOSPHOENOLPYRUVATE CARBOXYLASE (*AaPEPC1*) (OE1, OE2) or empty vector (EV), and wild-types (WT) grown in pots under normal growth conditions.** Values represent means  $\pm$  SD.
