Supplementary File 1: Standard Reference Handouts (Youth and Parent/Caregiver versions)

Helping You Get Ready for Adult Health Care Information for Teens

As a teenager, you are starting to learn how to take care of yourself. Over the next few years, you will gradually take on more responsibility for your health. This process, called, transition, is part of growing up.

Health care transition is when you make the change from getting pediatric services (e.g., from the children's health care team, the children's hospital or the children's treatment centre) to looking after your own health in adult services.

At around age 18, most teens are expected to say goodbye to their pediatric health care team. They transfer to adult care where they begin taking care of their health care. The exact time of transfer varies from person to person.

There is a map on the next page that shows how health care teams usually work closely with families to make 'graduation' to adult health care go as smoothly as possible, by:

telling you what to expect
giving you lots of information about your health
helping you make plans, set goals and learn what you need to do
making the change gradual, not sudden
supporting you along the way
