The Essential Medicinal Chemistry of Essential Medicines

Marta Serafini,[‡] Sarah Cargnin,[‡] Alberto Massarotti, Tracey Pirali*, and Armando A. Genazzani

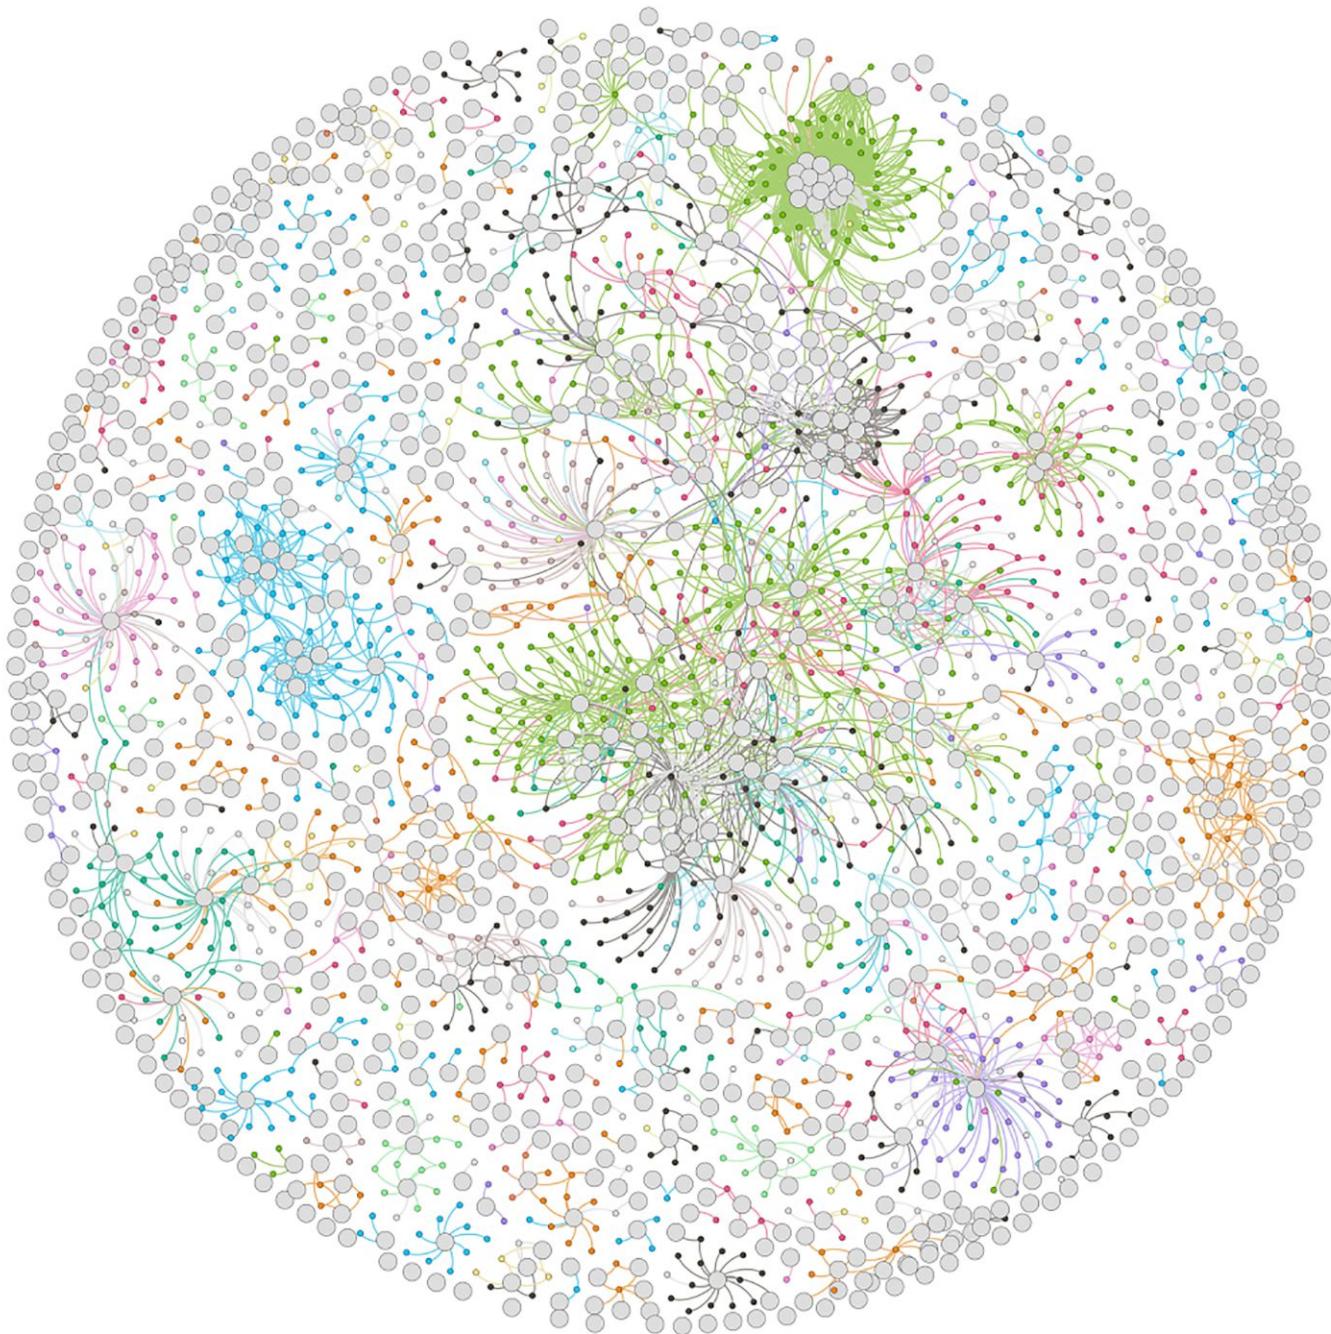

Department of Pharmaceutical Sciences, Università del Piemonte Orientale, Largo Donegani 2,
28100 Novara, Italy

Table of contents

- p. S2 The drug–target (DT) network of all approved drugs.
- p. S4 The drug–target (DT) network of EMs.
- p. S6 Distribution of chiral centers in the EMs.
- p. S7 Properties of cutaneous EMs.

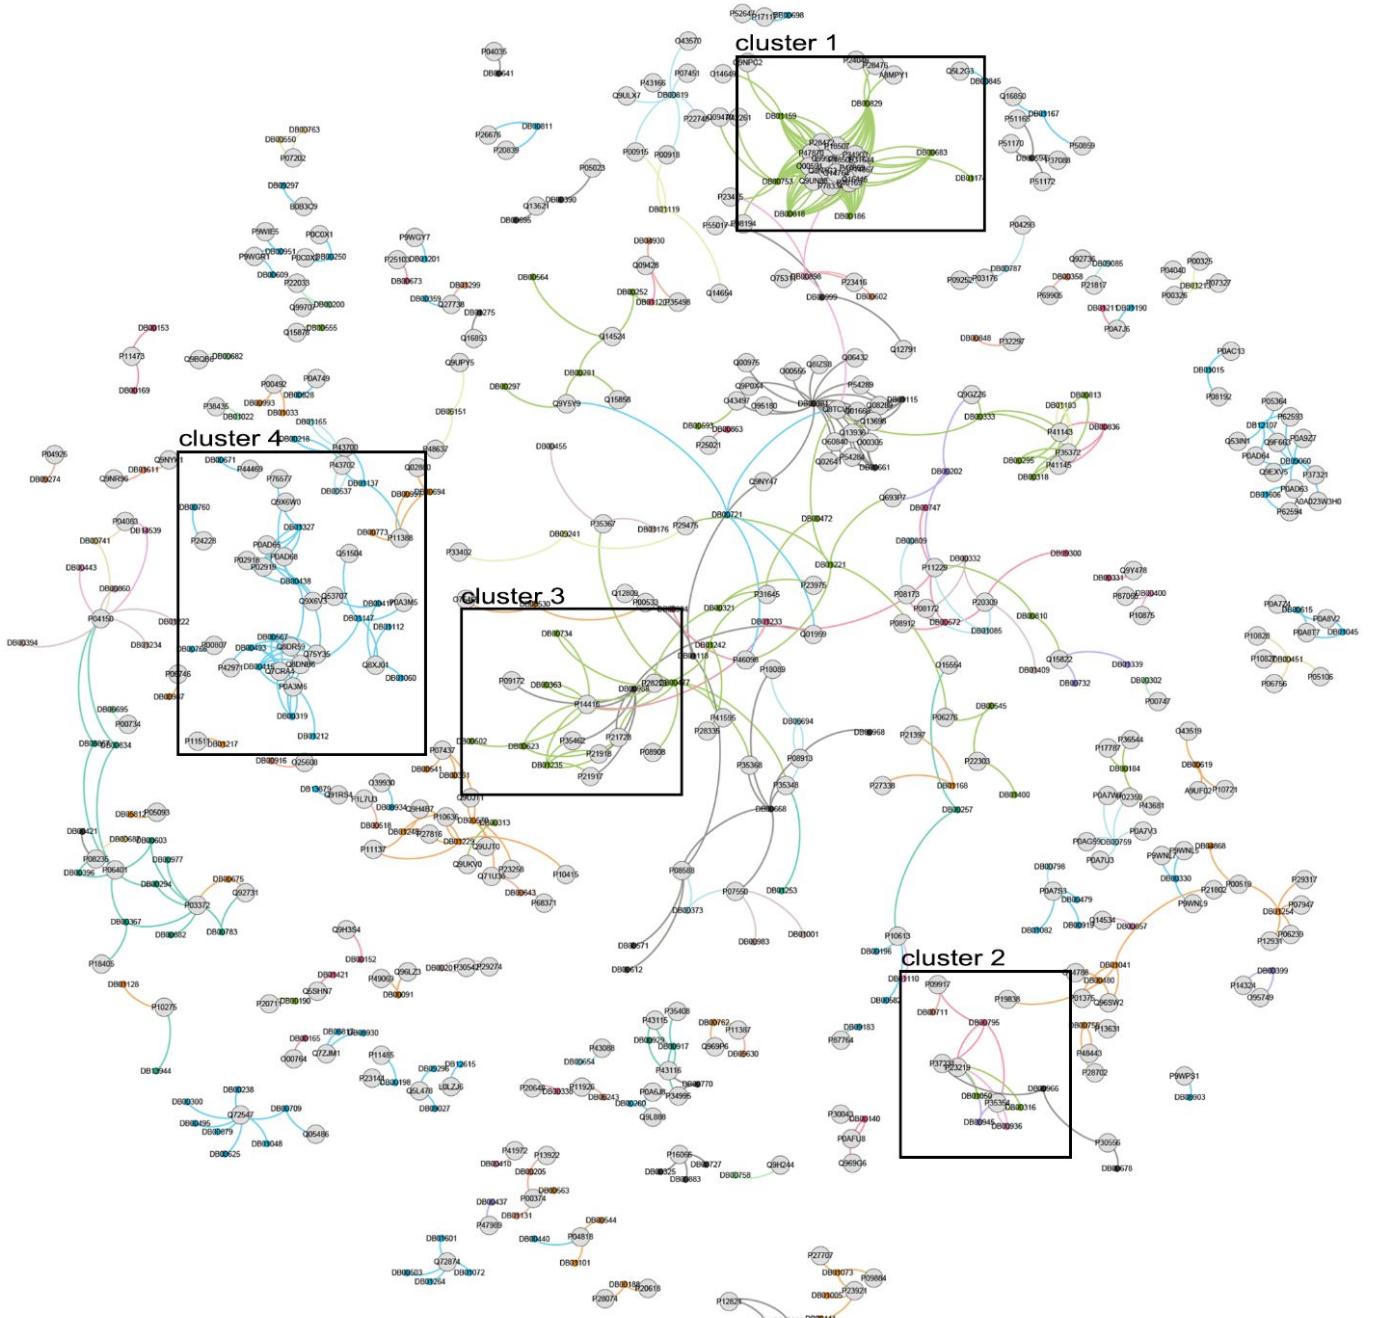

p. S8 Classification of EMs.

p. S26 References.

ATC code: A B C D G H J L M N P R S V

Figure S1. The drug–target (DT) network of all approved drugs. The DT network is generated by using the known associations between drugs and targets extracted from the DrugBank database.¹ As of March 2, 2020, DrugBank (version 5.1.5, released 2020-01-03) includes 2635 approved small molecule drugs and 1367 approved biologics. Additionally, 1148 non-redundant proteins (*i.e.* drug target/enzyme/transporter/carrier) sequences are linked to these drug entries. Small and big circles correspond to drugs and target proteins, respectively. A link is placed between a drug node and a target node if the protein is a known target of that drug. Drug nodes and connecting links are colored according to the ATC code of the drug.

ATC code: A B C D G H J L M N P R S V

Figure S2. The drug–target (DT) network of EMs. The DT network is generated by using the known associations between drugs and targets extracted from the DrugBank database.¹ As of March 2, 2020, DrugBank (version 5.1.5, released 2020-01-03) includes 2635 approved small molecule drugs and 1367 approved biologics. Additionally, 1148 non-redundant proteins (*i.e.* drug target/enzyme/transporter/carrier) sequences are linked to these drug entries. Small and big circles correspond to drugs and target proteins, respectively. The labels correspond to DrugBank and Uniprot codes, respectively. A link is placed between a drug node and a target node if the protein is a known target of that drug. Drug nodes and connecting links are colored according to the ATC code of the drug.

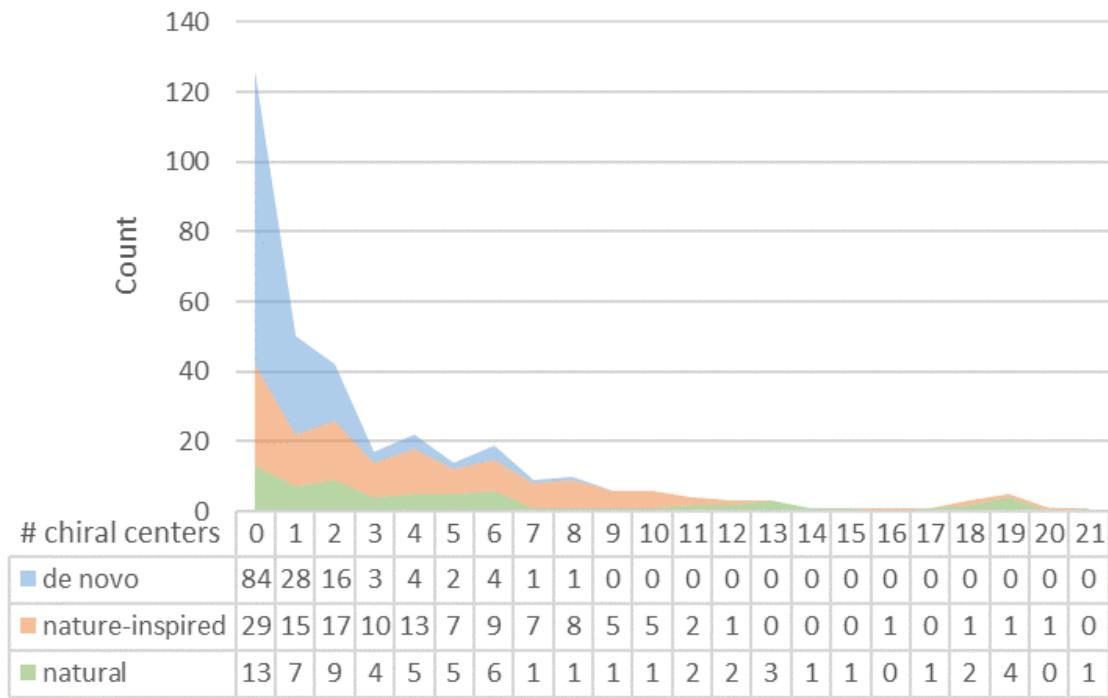

Figure S3. Distribution of chiral centers in de novo, Nature-inspired and natural drugs.

Table S1. Properties of cutaneous EMs.

Cutaneous EM	MW, Da	clogP	Melting point, °C
aciclovir	225.2	-0.95	256
benzoyl peroxide	242.23	2.75	103-106
benzyl benzoate	212.24	3.43	21
betamethasone valerate	392.46	3.78	232
fluorouracil	130.08	-0.58	282-283
hydrocortisone acetate	404.5	2.31	220
lidocaine	235.35	1.81	68.5
miconazole	416.13	5.86	170.5
mupirocin	499.61	2.25	77-78
permethrin	391.29	6.24	34
salicylic acid	137.11	1.96	158
terbinafine	292.44	5.51	>212
urea	60.06	-1.80	132.7

Abbreviations: clogP, calculated logP; clogP were extracted using DrugBank¹ or ChemSpider² databases.

Table S2. Salient features and classification of EMs reported in the 21st EML.

EM NAME	DRUGBANK ID CODE	CLASSIFICATION			ATC CODE/S	FDA year of approval*
		LEVEL A	LEVEL B	LEVEL C		
abacavir	DB01048	molecular entity	organic	Nature-inspired	J05AR04; J05AR13; J05AF06; J05AR02	1998
abiraterone	DB05812	molecular entity	organic	Nature-inspired	L02BX03	2011
acetazolamide	DB00819	molecular entity	organic	de novo	S01EC01	1953
acetic acid	DB03166	molecular entity	organic	natural	G01AD02; S02AA10	1960
