Supplementary table 1. Demographics for 7 intubated COVID-19 patients treated > 12 days in the intensive care unit (ICU) who did not develop critical illness neuropathy or myopathy (CIN/CIM) and from whom plasma samples were analysed for neurofilament light chain (NFL), tau and glial fibrillary acidic protein (GFAP). ACEi – Angiotensin Converting Enzyme inhibitor; ARB – Angiotensin Receptor Blocker. Values are represented as median (IQR) or n (%). The p-value originates from comparisons with CIN/CIM-group using the Mann-Whitney U test for continuous parameters and the chi-square test for categorical parameters. Values are represented as median (IQR) or n (%).

Supplementary table 2. Clinical data for 7 intubated COVID-19 patients treated > 12 days in the intensive care unit (ICU) who did not develop critical illness neuropathy or myopathy (CIN/CIM) and from whom plasma samples were analysed for neurofilament light chain (NFL), tau and glial fibrillary acidic protein (GFAP). Opioid analgesia includes morphine, oxycodone, remifentanil and/or fentanyl. Neuromuscular blockade includes rocuronium or atracurium. Values are represented as median (IQR) or n (%). The p-value originates from comparisons with CIN/CIM-group using the Mann-Whitney U test for continuous parameters and the chi-square test for categorical parameters. Values are represented as median (IQR) or n (%).
