Table S1. Data elements required in the HQMS system

No.	Data element	Field name	Data type	Length	Required	Remarks
1	Hospital ID	P900	Character	22	Yes	
2	Hospital name	P6891	Character	80	Yes	
3	Medical Insurance Number	P686	Character	50		
4	Health-card number	P800	Character	50		
5	Method of healthcare payment	P1	Character	1	Yes	
6	Admission times	P2	Number	3	Yes	
7	Medical record number	Р3	Character	20	Yes	
8	Name	P4	Character	40		
9	Gender	P5	Character	1	Yes	
10	Birth date	P6	Date			yyyy-mm-dd
11	Age	P7	Number	3		Unit (year)
12	Marital status	P8	Character	1	Yes	
13	Occupation	P9	Character	2		
14	Birthplace (province)	P101	Character	30		
15	Birthplace (city)	P102	Character	30		
16	Birthplace (county)	P103	Character	30		
17	Ethnicity	P11	Character	20		
18	Nationality	P12	Character	40		
19	Social ID	P13	Character	18		
20	Residence	P801	Character	200		
21	Residential phone number	P802	Character	40		
22	Postcode of residence	P803	Character	6		
23	Name and address of employer	P14	Character	200		
24	Phone number	P15	Character	40		
25	Postcode of employer address	P16	Character	6		
26	"Hukou" address	P17	Character	200		
27	Postcode of "Hukou" address	P171	Character	6		
28	Name of the contact	P18	Character	20		
29	Relationship with the patient	P19	Character	40		
30	Address of the contact	P20	Character	200		
31	Admission path	P804	Character	1		
32	Phone number of the contact	P21	Character	30		
33	Admission date	P22	Date, time		Yes	yyyy-mm-dd HH:mm:ss
34	Department of admission	P23	Character	6	Yes	
35	Ward of admission	P231	Character	30		
	Department of patient being					
36	transferred to	P24	Character	6		
37	Discharge date	P25	Date, time		Yes	yyyy-mm-dd HH:mm:ss
38	Department of discharge	P26	Character	6	Yes	

39	Ward of discharge	P261	Character	30		
40	Length of hospitalization	P27	Number	6	Yes

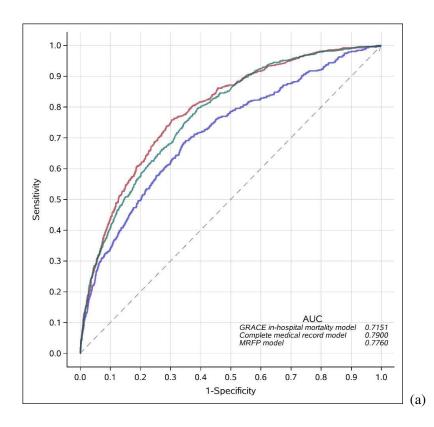

Figure S1. Flowchart of patients' exclusion

RSMR: risk standardized mortality rate

## Appendix A. Comparison of established risk-perdition model with the GRACE ACS in-hospital mortality model

We calculated the predicted probability of in-hospital death among our development and validation cohorts by 3 models (GRACE ACS model, our complete medical record model and medical record front page model), separately. Then we calculated the AUC of each model and test the statistical difference between GRACE and our models. Integrated discrimination improvement(IDI) was also calculated to evaluated the overall improvement of out models compared with GRACE. Results showed that compared with GRACE ACS model, both our two patient risk prediction model had better AUC (all p value < 0.001, see bellowing Figure) and positive IDI among development and validation cohorts. In detail, the IDI of medical record front page model compared with GRACE model was 0.010 (0.003,0.017) in development cohort, and 0.028 (0.021,0.036) in validation cohort.

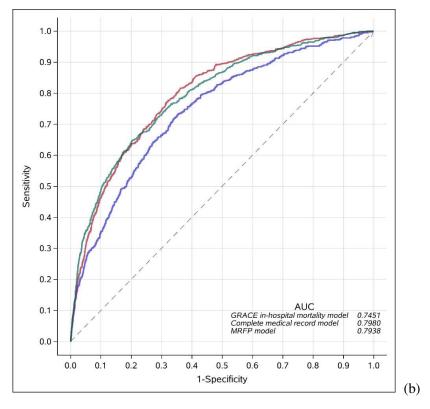

Figure. ROC of 3 models among development(a) and validation(b) cohort.

Figure S2. Receiver operating characteristic (ROC) curve of MRFP model and complete medical record model based on modelling and validation cohorts.

MRFP: medical record front page.

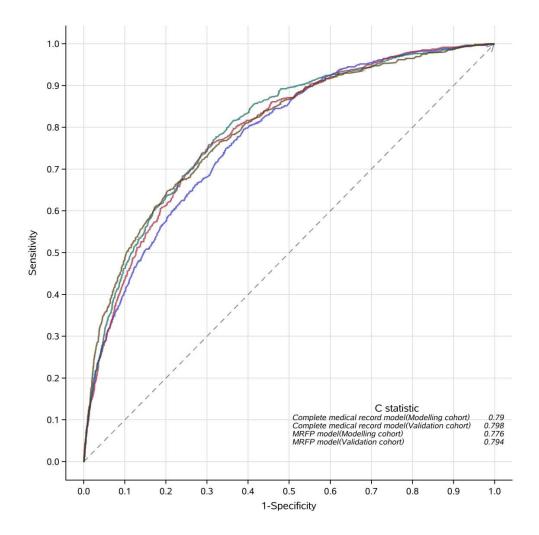

Figure S3. Distribution of risk standardized mortality rate of study hospitals estimated by MRFP model. (a) Modelling cohort (b) Validation cohort
