

Data Sharing Statement

Article Info	http://dx.doi.org/10.21037/tlcr-20-919	
Item	Question	Authors' Response (place "-" if not applicable)
1	Would you like to share data collected for your study to others?	No, we are unable to share the raw data as it is owned by the NHS and was only released for this study.
2	If not, would you like to share the reason for your decision?	The data is not required as all the input parameters which were derived from the data and expert opinion are included in the model.
3	What data in particular will be shared?	The input parameters for the current and single cancer pathway models have been provided in a separate document.
4	Any other documents will be share? Such as study protocol, statistical analysis plan, informed consent form, clinical study report, analytic code.	The simulation model can be provided on request if the proposed user has a professional version of SIMUL8.
5	When will data availability begin?	The input parameters have been submitted alongside the manuscript.
6	When will data availability end?	-
7	To whom will you share the data?	The input parameters can be made available to everyone. The simulation model can be provided on request to those that have a professional version of SIMUL8.
8	For what type of analysis or purpose?	The parameters are used in the simulation model to represent the care pathways of lung cancer patients at two hospitals in Wales. Other hospitals would need different parameter values and the model itself could look very different if their process is different to those discussed in this study.
9	How or where can the data/documents be obtained?	The raw data is not available outside of this study.
10	Any other restrictions?	-
