Supplementary Method 1 Validation in SATSA

SATSA is a sub-cohort of the Swedish Twin Registry (STR)¹, but consists of completely independent participants compared to those participating in TwinGene. A maximum of 844 SATSA participants (341 men and 503 women) had the following information: 1) at least one serum biomarker assessed, 2) healthspan derived from disease diagnoses, 3) follow-up on all-cause mortality (as death is one of the healthspan-terminating conditions). In addition, a total of 542 SATSA participants had their genotypes assessed.

Briefly, we replicated the following procedures in SATSA: 1) developing the healthspan phenotype using the same definition in TwinGene; 2) selecting the first available biomarker assessment when repeated measurements are available (average age of 63.5 years), log transforming where required (FBG, HbA1c, TG, and CRP), and rescaling all biomarker values to units of one standard deviation; 3) using the same genetic loci and GWAS weights in TwinGene analysis to calculate the polygenic risk score (PRS) for FBG among SATSA participants; 4) re-examining the statistically significant biomarker-healthspan associations identified in TwinGene using the same statistical methods.

Supplementary Table 1 ICD codes related to the chronic diseases

	ICD-7 -1967	ICD-8 1968-1986	ICD-9 1987-1996	ICD-10 1997-
Diabetes	260 Diabetes mellitus	250 Diabetes mellitus	250 Diabetes mellitus	E10 Insulin-dependent diabetes mellitus E11 Non-insulin-dependent diabetes mellitus E12 Malnutrition-related diabetes mellitus E13 Other specified diabetes mellitus E14 Unspecified diabetes mellitus
CHF	434.1 Congestive heart failure 434.2 Left ventricular failure	427.0 failure 427.1 Left ventricular failure	Congestive heart failure Left ventricular	428 Heart failure I50 Heart failure
Cancer	140-207	140-209	140-208	C00-C97 B21
MI	420 Arteriosclerotic heart disease, including coronary disease	410 Acute myocardial infarction 411 Other acute and subacute forms of ischaemic heart disease 412 Chronic ischaemic heart disease 414 Asymptomatic ischaemic heart disease	410 Acute myocardial infarction 411 Other acute and subacute forms of ischaemic heart disease 412 Old myocardial infarction 414 Other forms of chronic ischaemic heart disease	I21 Acute myocardial infarction I22 Subsequent myocardial infarction I23 Certain current complications following acute myocardial infarction I24 Other acute ischaemic heart diseases I25 Chronic ischaemic heart disease
Stroke	330 Subarachnoid haemorrhage 331 Cerebral haemorrhage 332 Cerebral embolism and thrombosis 334 Other and ill-defined vascular lesions affecting central nervous system	430 Subarachnoid haemorrhage 431 Cerebral haemorrhage 433 Cerebral thrombosis 434 Cerebral embolism 436 Acute but ill-defined cerebrovascular disease	430 Subarachnoid haemorrhage 431 Intracerebral haemorrhage 432 Other and unspecified intracranial haemorrhage 434 Occlusion of cerebral arteries 436 Acute but ill-defined cerebrovascular disease	I60 Subarachnoid haemorrhage I61 Intracerebral haemorrhage I62 Other nontraumatic intracranial haemorrhage I63 Cerebral infarction I64 Stroke, not specified as haemorrhage or infarction
COPD	501 Bronchitis unqualified 502 Chronic bronchitis	490 Bronchitis, unspecified 491 Chronic bronchitis 492 Emphysema	490 Bronchitis, not specified as acute or chronic 491 Chronic bronchitis 492 Emphysema 496 Chronic airways obstruction, not elsewhere classified	J40 Bronchitis, not specified as acute or chronic J41 Simple and mucopurulent chronic bronchitis J42 Unspecified chronic bronchitis J43 Emphysema J44 Other chronic obstructive pulmonary disease
Dementia	304 Senile psychosis 305 Presenile psychosis 306 Psychosis with cerebral arteriosclerosis	290 Senile and presenile dementia 293.0 Cerebral arteriosclerosis 293.1 Other cerebrovascular disturbances	290.0 Senile dementia, uncomplicated 290.1 Presenile dementia 290.4 Arteriosclerotic dementia 290.8 Other specified senile psychotic conditions	F00 Dementia in Alzheimer's disease F01 Vascular dementia F02 Dementia in other diseases classified elsewhere F03 Unspecified dementia

290.9	Unspecified senile psychotic condition	F05.1	Delirium superimposed on dementia
294.1	Dementia in conditions classified elsewhere	G30	Alzheimer's disease
331.0	Alzheimer's disease	G31.1	Senile degeneration of brain, not elsewhere classified
331.1	Pick's disease	G31.8A	Lewy body dementia
331.2	Senile degeneration of brain		
331.9	Cerebral degeneration, unspecified		

MI myocardial infarction, CHF coronary heart failure, COPD chronic obstructive pulmonary disease.

FBG fasting blood glucose, HbA1c hemoglobin A1C, TC total cholesterol, HDL-C high-density lipoprotein cholesterol, LDL-C low-density lipoprotein cholesterol, ApoA1 Apolipoprotein A1, ApoB Apolipoprotein B, TG triglyceride, CRP C-reactive protein, Hb hemoglobin.

Supplementary Table 7 Validation of biomarker-healthspan associations in SATSA

Biomarker	SATSA					Effect directions in SATSA and in TwinGene	HR (95%CI) in TwinGene
	Number of individuals	Number of chronic events	Median follow-up year	HR (95%CI)	Raw P value		
Serum							
HbA1c	117	34	3.3	1.13 (0.56, 2.27)	0.727	--	1.29 (1.24, 1.34)
FBG	759	642	14.9	1.18 (1.09, 1.29)	1.36e-4	-- *	1.28 (1.23, 1.33)
CRP	242	142	7.7	1.21 (1.03, 1.41)	0.018	-- *	1.11 (1.08, 1.15)
TG	735	619	15.0	1.06 (0.97, 1.16)	0.176	--	1.07 (1.03, 1.11)
TC	735	619	15.0	1.03 (0.96, 1.11)	0.421	+ -	0.96 (0.92, 0.99)
ApoA1	737	621	14.9	0.94 (0.86, 1.02)	0.153	++	0.93 (0.89, 0.96)
HDL-C	687	576	14.0	0.89 (0.82, 0.96)	0.002	++ *	0.92 (0.89, 0.96)
PRS							
FBG	492	406	15.3	1.04 (0.95, 1.15)	0.382	--	1.05 (1.02, 1.09)

HRs indicate the relative risk of experiencing any chronic event associated with one-SD increase in serum biomarker concentrations or FBG PRS.

Significant effects (- risk factor, + protective factor) found in both TwinGene (FDR-adjusted $P<0.05$) and SATSA (raw $P<0.05$) were marked by *.

HbA1c hemoglobin A1C, FBG fasting blood glucose, CRP C-reactive protein, TG triglyceride, TC total cholesterol, ApoA1 Apolipoprotein A1, HDL-C high-density lipoprotein cholesterol, PRS polygenic risk score, HR hazard ratio, CI confidence interval.

Supplementary Table 8 Multiple-biomarkers regression

Serum biomarkers included in the final model	HR (95%CI)	Raw P value
Healthspan model		
FBG	1·14 (1·08, 1·20)	1·54e-06
HbA1c	1·17 (1·11, 1·23)	5·95e-09
TG	1·05 (1·01, 1·09)	0·020
TC	0·86 (0·77, 0·96)	0·008
LDL-C	1·11 (1·00, 1·24)	0·051
CRP	1·10 (1·07, 1·14)	1·65e-08
Lifespan model		
FBG	1·04 (0·99, 1·10)	0·121
HbA1c	1·14 (1·08, 1·20)	6·23e-07
TG	1·12 (1·07, 1·17)	3·42e-06
TC	0·91 (0·88, 0·95)	1·87e-05
Hb	0·92 (0·88, 0·96)	1·08e-04
CRP	1·12 (1·08, 1·17)	2·15e-08

HRs indicate the relative risk of experiencing any chronic event associated with one-SD increase in serum biomarker concentrations or FBG PRS.

HbA1c hemoglobin A1C, FBG fasting blood glucose, CRP C-reactive protein, TG triglyceride, TC total cholesterol, Hb hemoglobin, LDL-C low-density lipoprotein cholesterol, HR hazard ratio, CI confidence interval.

Supplementary Table 9 Associations of biomarker PRSs with healthspan and lifespan in all participants, men, and women

Group	Outcome	PRS	Number of individuals	Number of events	Median follow-up year	HR (95%CI)	FDR-corrected P value	Raw P value

Supplementary Figure 1 Study design and study population

Of all TwinGene participants, a total of 12098 and 2024 qualified individuals had serum clinical biomarkers and serum non-targeted metabolites assessed, respectively. Individuals who had a previous diagnosis of any event were excluded in the healthspan analyses. Of all included participants, 10098 of them had quality controlled genotype data and were included in the genetic association analyses.

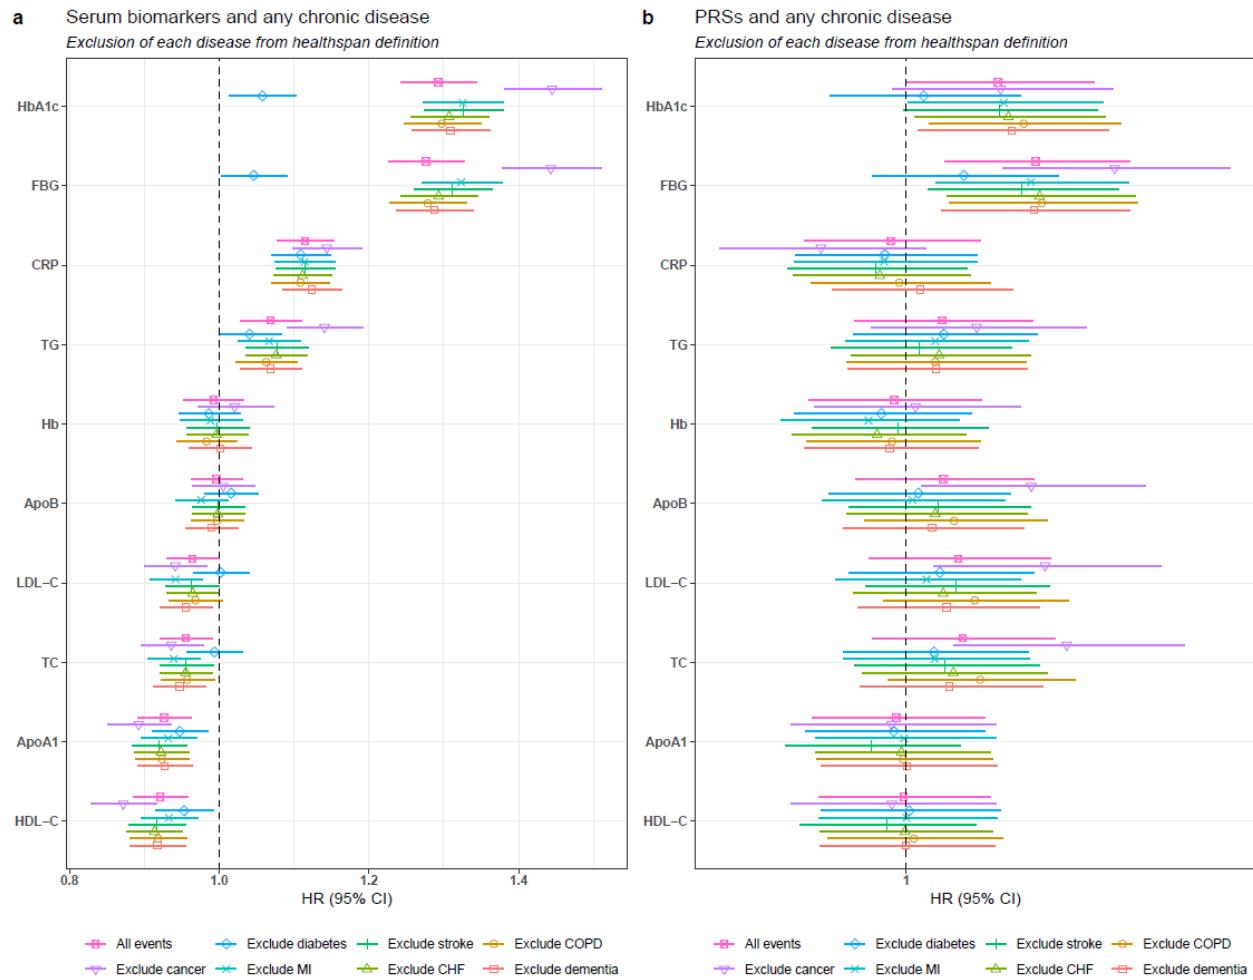

BMI body mass index, PRS polygenic risk score, PC principal component

Supplementary Figure 2 Correlations of serum biomarkers

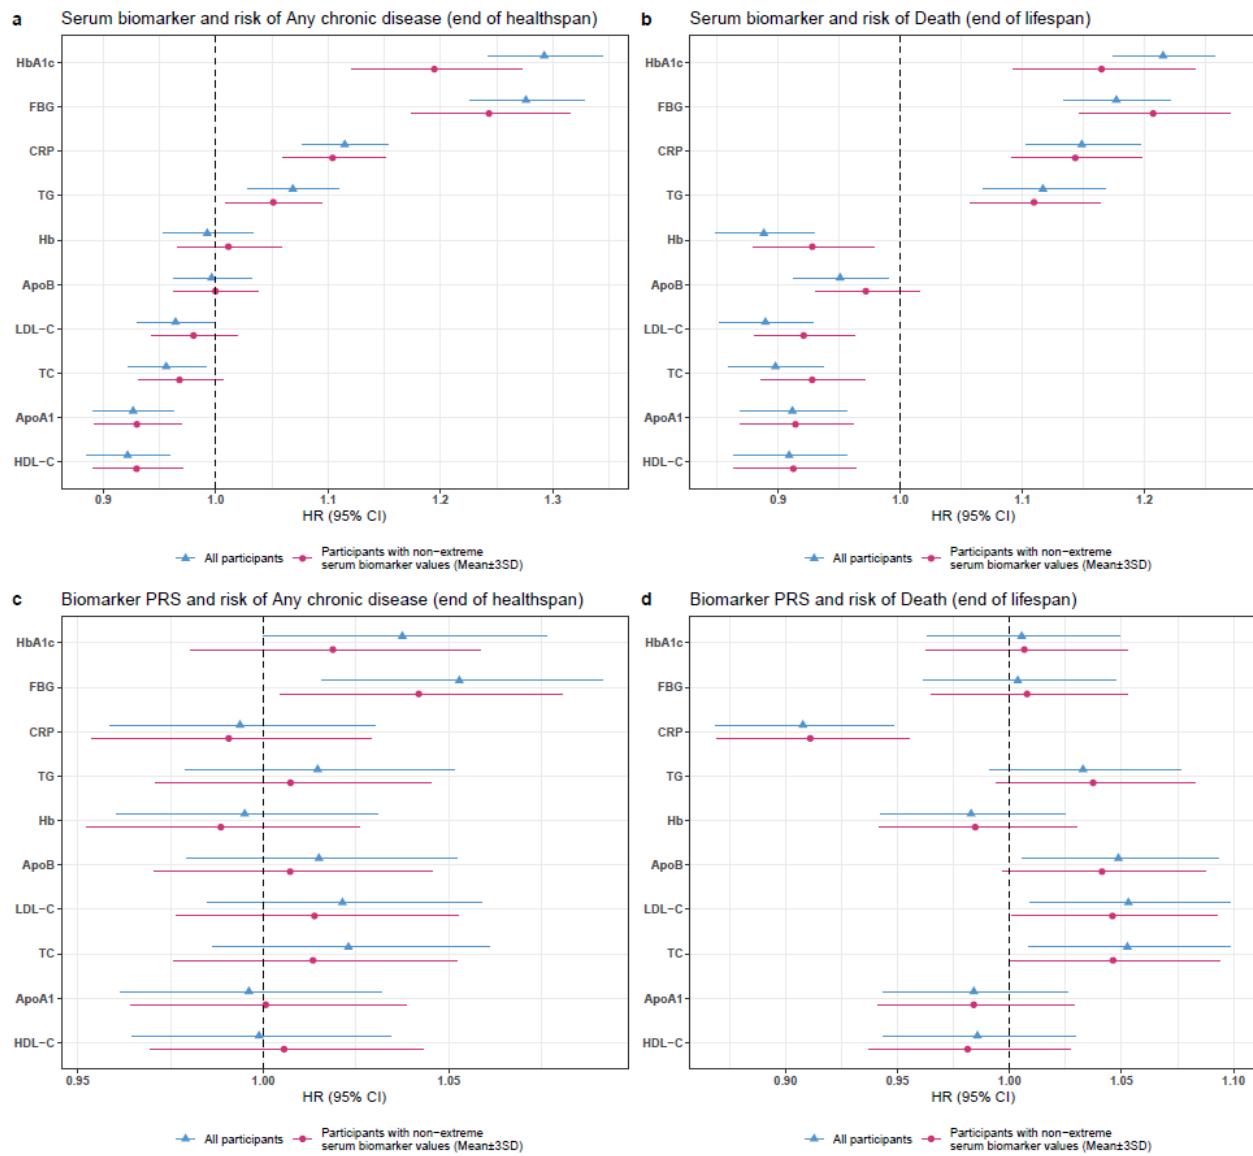

Cells of the heatmap represent the correlations between serum biomarker pairs. Color density of each cell indicates the magnitude of Pearson correlation coefficients, with red and blue showing positive and negative correlations, respectively. Glycemic and lipid biomarkers constituted three clusters of high correlations, namely 1) FBG and HbA1c, 2) TC, LDL-C, and ApoB, and 3) HDL-C and ApoA1.

FBG fasting blood glucose, HbA1c hemoglobin A1C, TC total cholesterol, HDL-C high-density lipoprotein cholesterol, LDL-C low-density lipoprotein cholesterol, ApoA1 Apolipoprotein A1, ApoB Apolipoprotein B, TG triglyceride, CRP C-reactive protein, Hb hemoglobin.

Supplementary Figure 3 Leave-one-disease-out sensitivity analysis

Supplementary Figure 3 shows the HR (95% CI) of any chronic disease that are associated with one-SD increase in serum biomarker concentration (Panel a) and PRS (Panel b). For each relationship, we estimated the relative risks among all participants and among subsets of study population after exclusion of individuals whose healthspan were ended due to the same disease.

Supplementary Figure 4 Sensitivity analysis with the exclusion of serum biomarker outliers

Panel a-d illustrated the associations, quantified as HR (95% CI), of biomarkers with any chronic disease and death, respectively. HRs indicate the relative risk of experiencing any chronic disease or death associated with one-SD increase in serum biomarker concentrations or biomarker PRSs. Results estimated among the whole study population and among the non-outlier participants were showed in color blue and red, respectively.
