

**Supplementary Table 1.** Comparison of response decreases on the initial RNS test between the ROMG and the GOMG groups

	<b>ROMG (n=88)</b>	<b>GOMG (n=24)</b>	<b>p</b>
Response decrease in RNS test*			
Orbicularis oculi	6.8±8.4	12.2±15.5	0.116
Nasalis	7.8±8.1	12.7±14.2	0.112
Trapezius	4.6±5.3	9.1±10.0	0.044
Abductor digiti minimi	1.3±2.1	4.6±5.8	0.011
Flexor carpi ulnaris	3.1±4.6	9.5±10.7	0.009

Data are mean±SD values.

\*If no decrease in the response was detected, the decrease was assigned as 0.

GOMG: symptom conversion to generalized myasthenia gravis, RNS: repetitive nerve stimulation, ROMG: remained as ocular myasthenia gravis.
