Data are results of general linear models for hearing indices using each factor as a predictor after controlling for age, sex, and education.

* $p < 0.05$.

ADCI: Alzheimer's disease-related cognitive impairment, *APOE4*: apolipoprotein E gene E4 variant, BDI: Beck Depression Inventory, CMBs: cerebral microbleeds, K-MMSE: Korean version of Mini-Mental State Examination, LBCI: Lewy-body disease-related cognitive impairment, PTA: pure-tone average, WMHs: white-matter hyperintensities, WRS: word recognition score.
