

Figure S1. Western blotting was used to detect the expression levels of IRF1 in different colon cancer cell lines. IRF1, interferon regulatory factor 1.

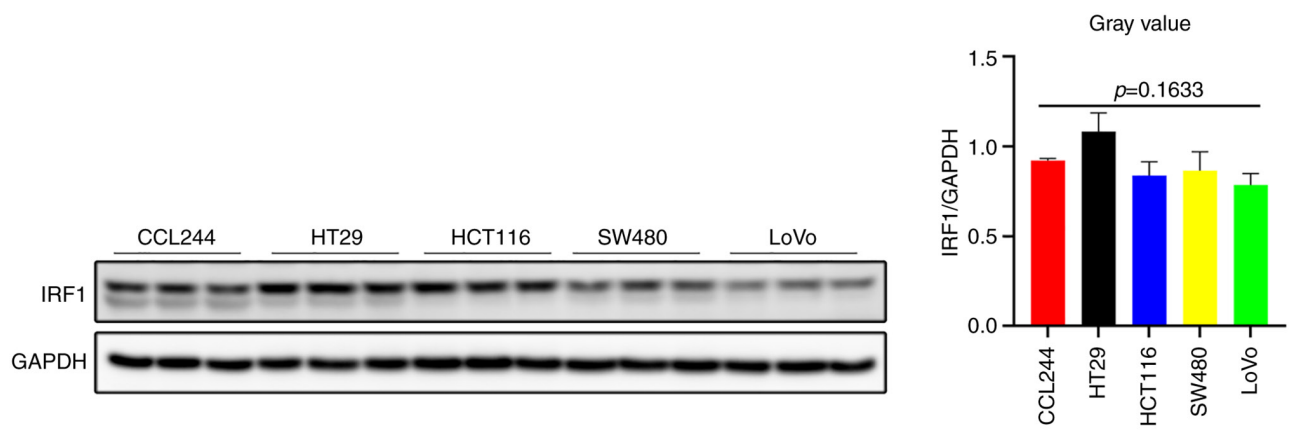

Figure S2. At 48 h after shRNA-IRF1 and shRNA-NC transfection, or Ad-IRF1 and Ad-NC infection, western blotting was used to detect the expression levels of IRF1 in colorectal cancer cells. Ad, adenovirus expression vector; IRF1, interferon regulatory factor 1; NC, negative control; shRNA, short hairpin RNA.
