eFigure 1: Standardized Difference Plot^{a,b,c,d}

Abbreviations: AFib, atrial fibrillation; Aflutter, atrial flutter; ASA, acetylsalicylic acid or aspirin; BMI, body mass index; CABG, coronary artery bypass graft; CAD, coronary artery disease; CHF, congestive heart failure; CKD, chronic kidney disease; CVA, cerebrovascular accident; DVT, deep vein thrombosis; GIB, gastrointestinal bleed; HAS-BLED, hypertension, abnormal renal/liver function, stroke, bleeding history or predisposition, labile INR, elderly, drugs/alcohol concomitantly; HTN, hypertension; MI, myocardial infarction; NSAID, nonsteroidal anti-inflammatory drug; PAD, peripheral arterial disease; PCI, percutaneous coronary intervention; PE, pulmonary embolism; TIA, transient ischemic attack.

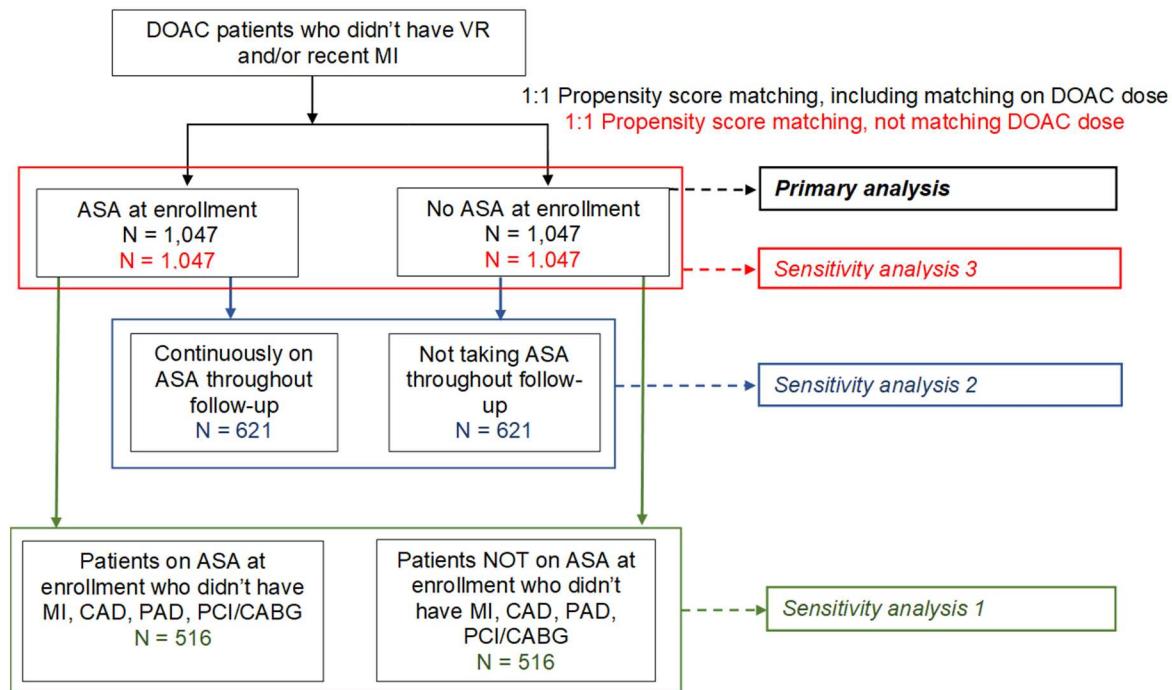

^aAbsolute standardized differences in baseline covariates between patients treated with DOAC+ASA and those treated with DOAC monotherapy for atrial fibrillation or venous thromboembolism, before and after propensity score matching.

^bHighlighted variables indicate those with residual differences after matching that were then included in the Poisson models.

^c Labile INR was excluded when calculating the HAS-BLED score.

^dSpecific DOAC drug types were not used for matching but are shown for reference.
