

**S3 Table.** Percentage of Olig2-positive/BrdU-labeled cells in the coronal and rostral suprasylvian sulci floors in PD 20 ferrets.

	VPA	Control
Sulcal floors		
Coronal sulcus (cns)	25.0% (12/48)	17.4% (4/23)
Rostral suprasylvian sulcus (rsss)	27.1% (13/48)	19.2% (5/26)

Percentages were calculated by summing each immunolabeled cell counted within all ROIs from eight cerebral hemispheres in each group. The number of each labeled cell for calculating the percentages is shown in parentheses as a function of total BrdU-labeled cells from eight cerebral hemispheres in each group.
