

Figure S2

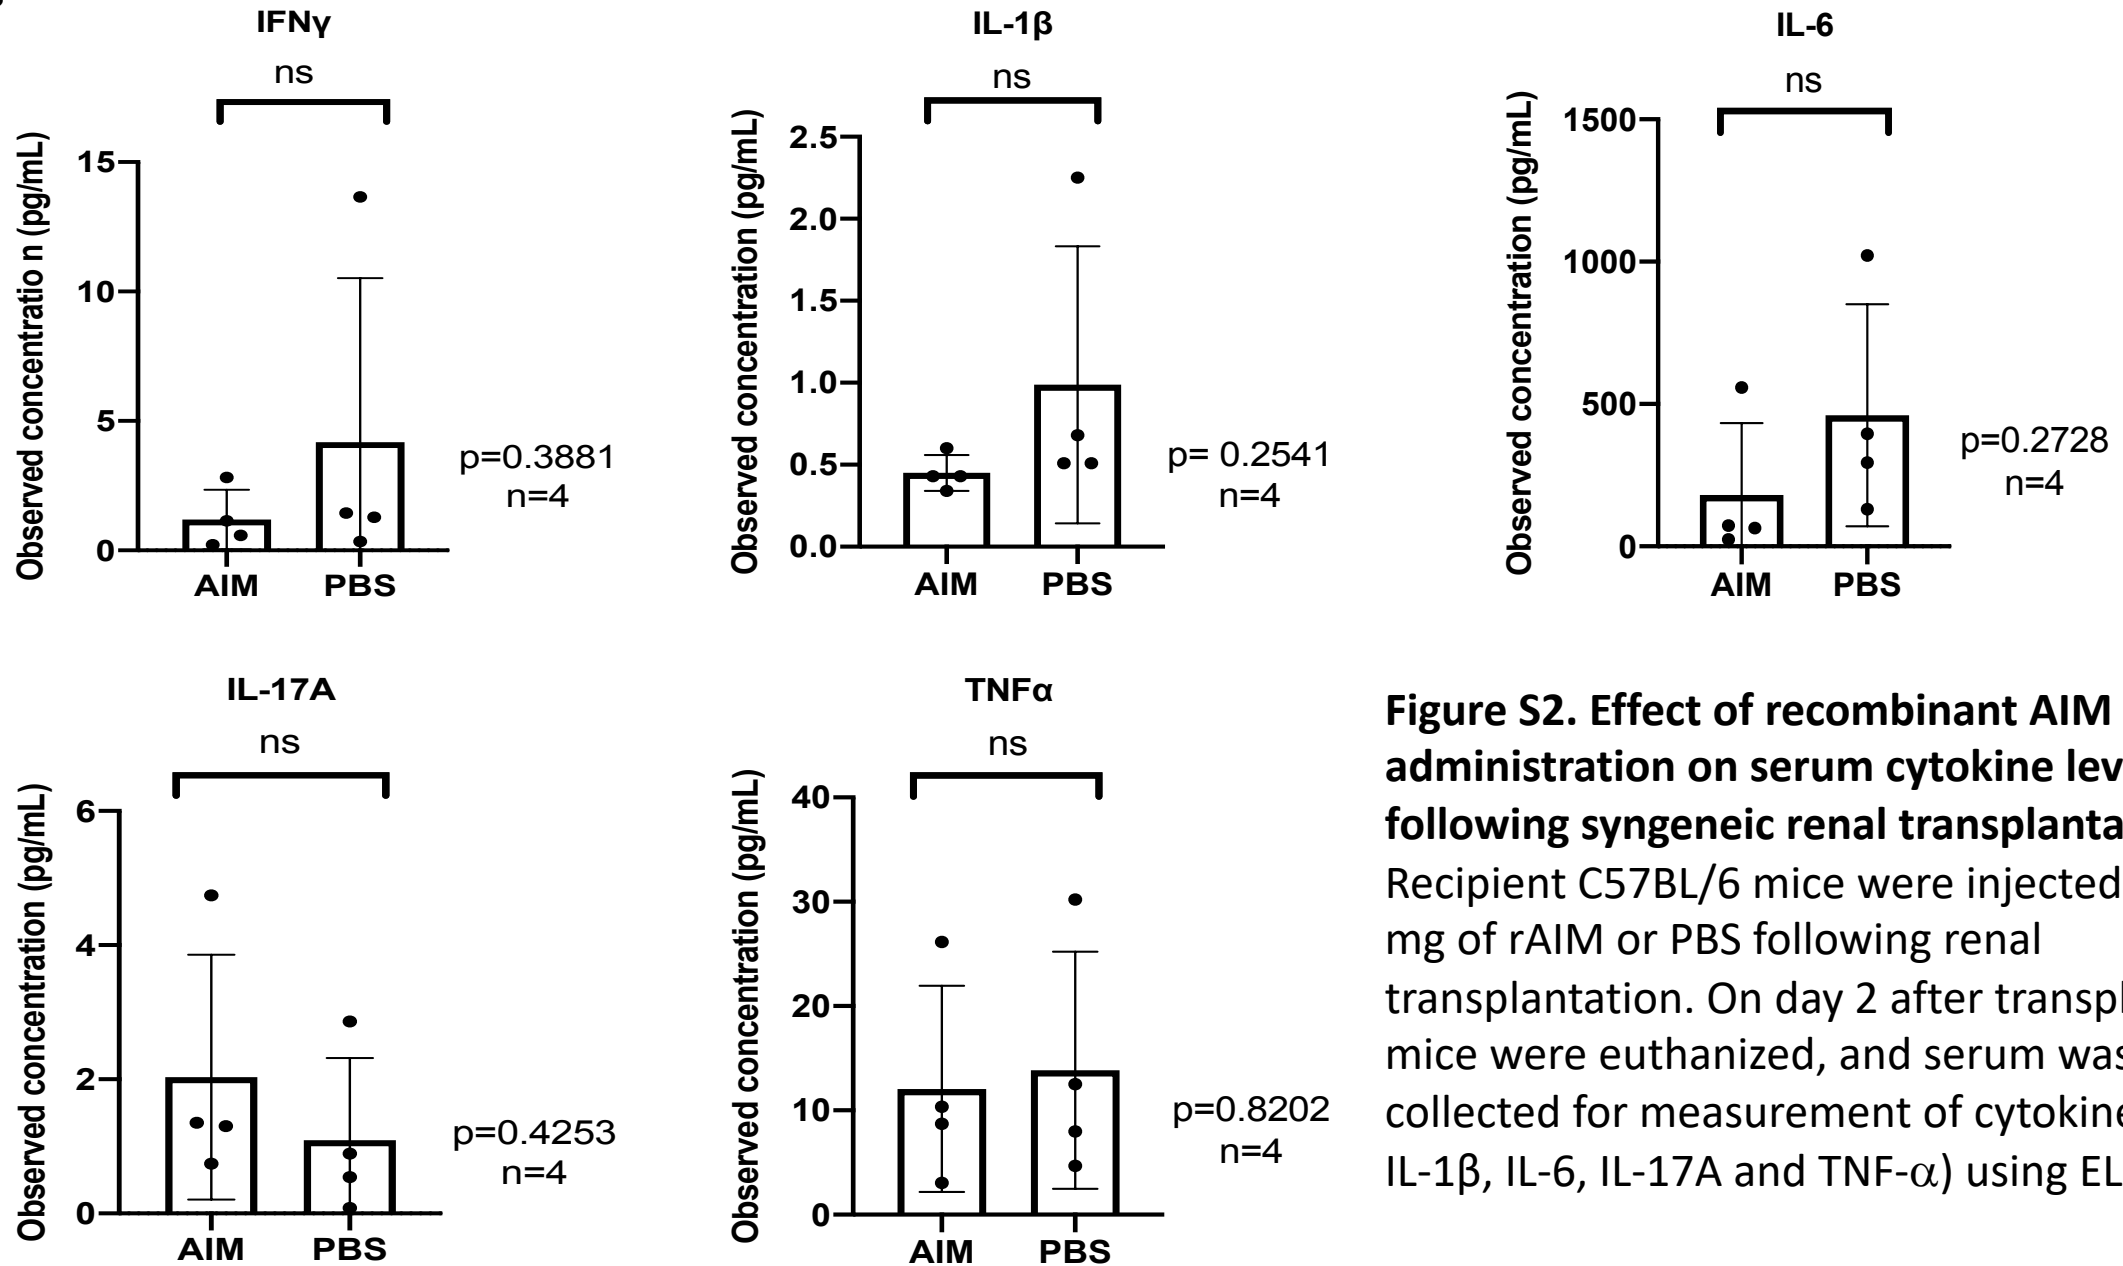

Figure S2. Effect of recombinant AIM administration on serum cytokine levels following syngeneic renal transplantation. Recipient C57BL/6 mice were injected i.v. with 2 mg of rAIM or PBS following renal transplantation. On day 2 after transplantation, mice were euthanized, and serum was collected for measurement of cytokines (IFN- γ , IL-1 β , IL-6, IL-17A and TNF- α) using ELISA.
