

Supplementary Figure 5. Construction a robust nomogram prediction model using the risk signature and other clinicopathological parameters. (A) A nomogram of the HNSCC cohort used to predict the OS. Calibration maps used to predict the 1-year OS (B), 2-year OS (C) and 3-year OS (D), respectively. (E) A nomogram of the HNSCC cohort used to predict the DSS. Calibration plots for the 1-year DSS (F), 2-year DSS (G) and 3-year DSS (H) in the HNSCC cohort.
