

Supplementary Figure 1. Acquisition of coronary thrombus. (a) Thrombus aspiration using a manual suction device during primary coronary intervention. (b) Acquired thrombus using a dedicated filter. (c) Samples were moved and stored in an Eppendorf tube filled with 0.9% normal saline.

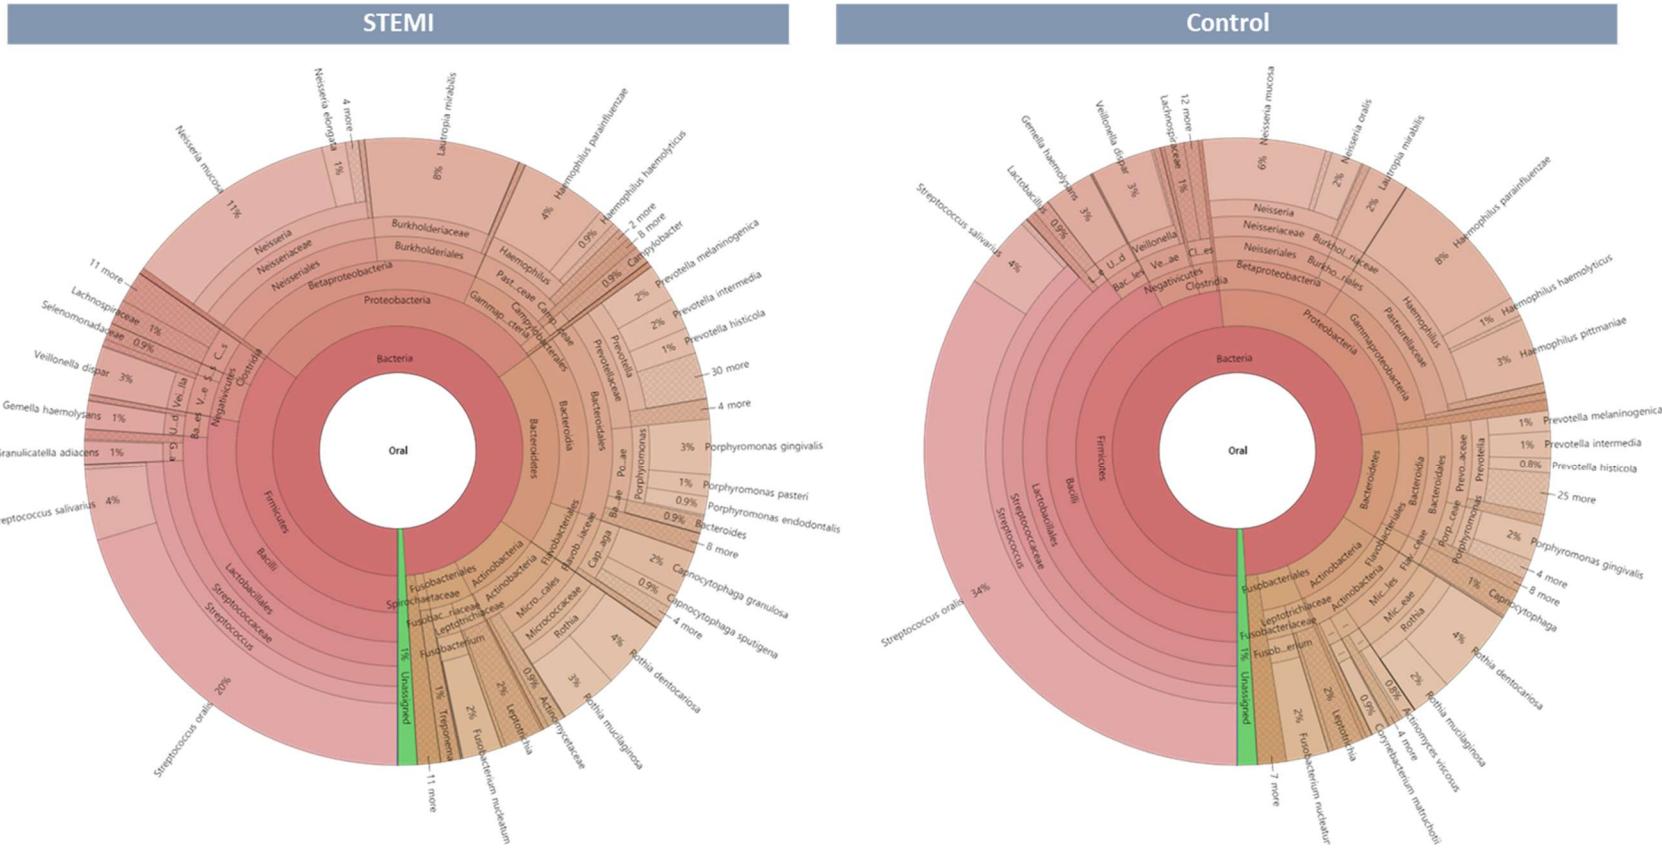

Supplementary Figure 2. Krona chart of the bacteria represented by 16S rRNA sequences recovered (a) the gut microbiome and (b) the oral microbiome.

(a) Gut

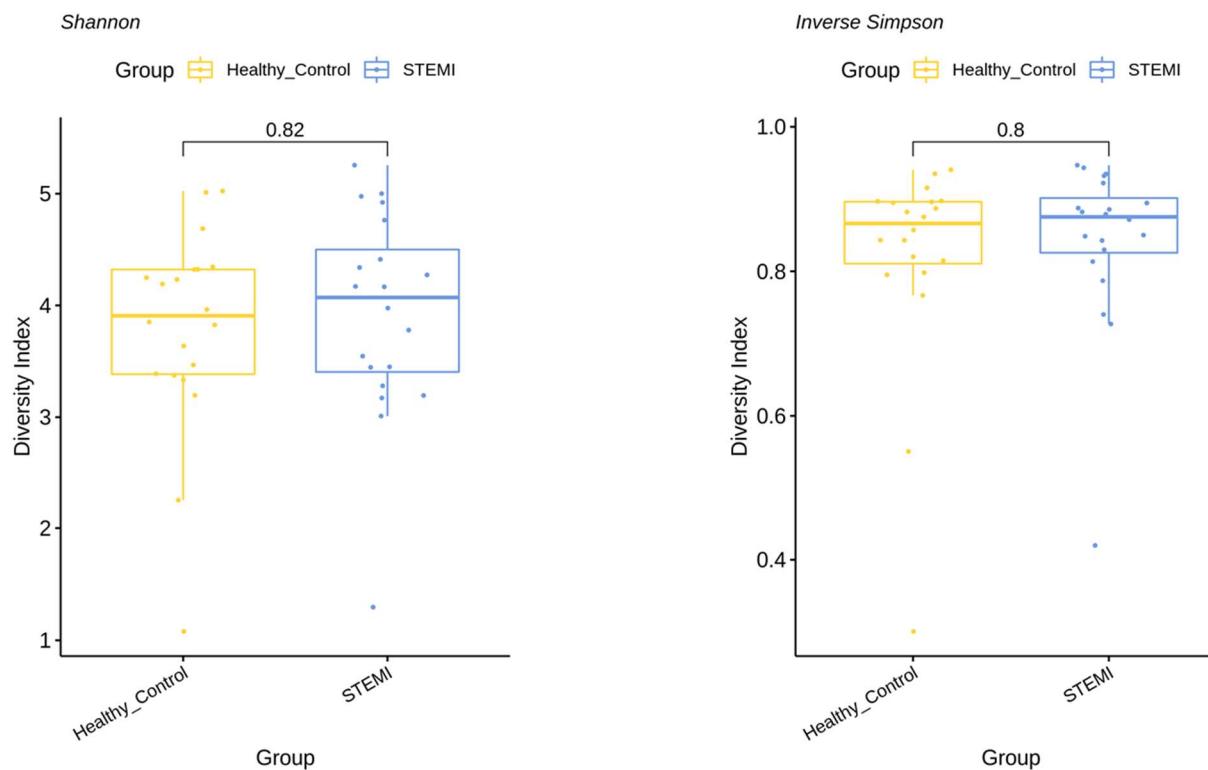

(b) Oral cavity

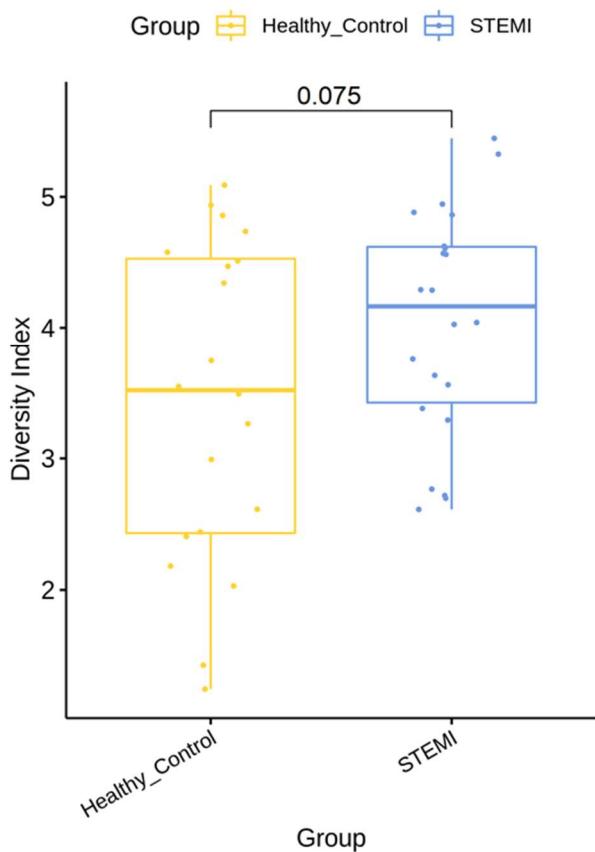

Supplementary Figure 3. Alpha-diversity of (a) the gut microbiome and (b) the oral microbiome did not differ significantly between the groups (Stool sample: $P=0.820$ by the Shannon index, $P=0.799$ by the inverse Simpson index; oral sample: $P=0.075$ by the Shannon index, $P=0.299$ by the inverse Simpson index).

(a) Gut

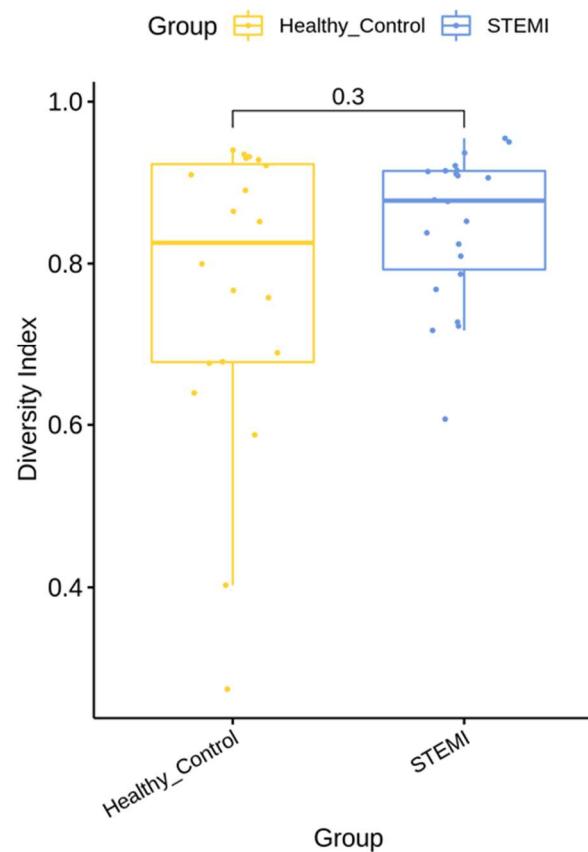

(b) Oral

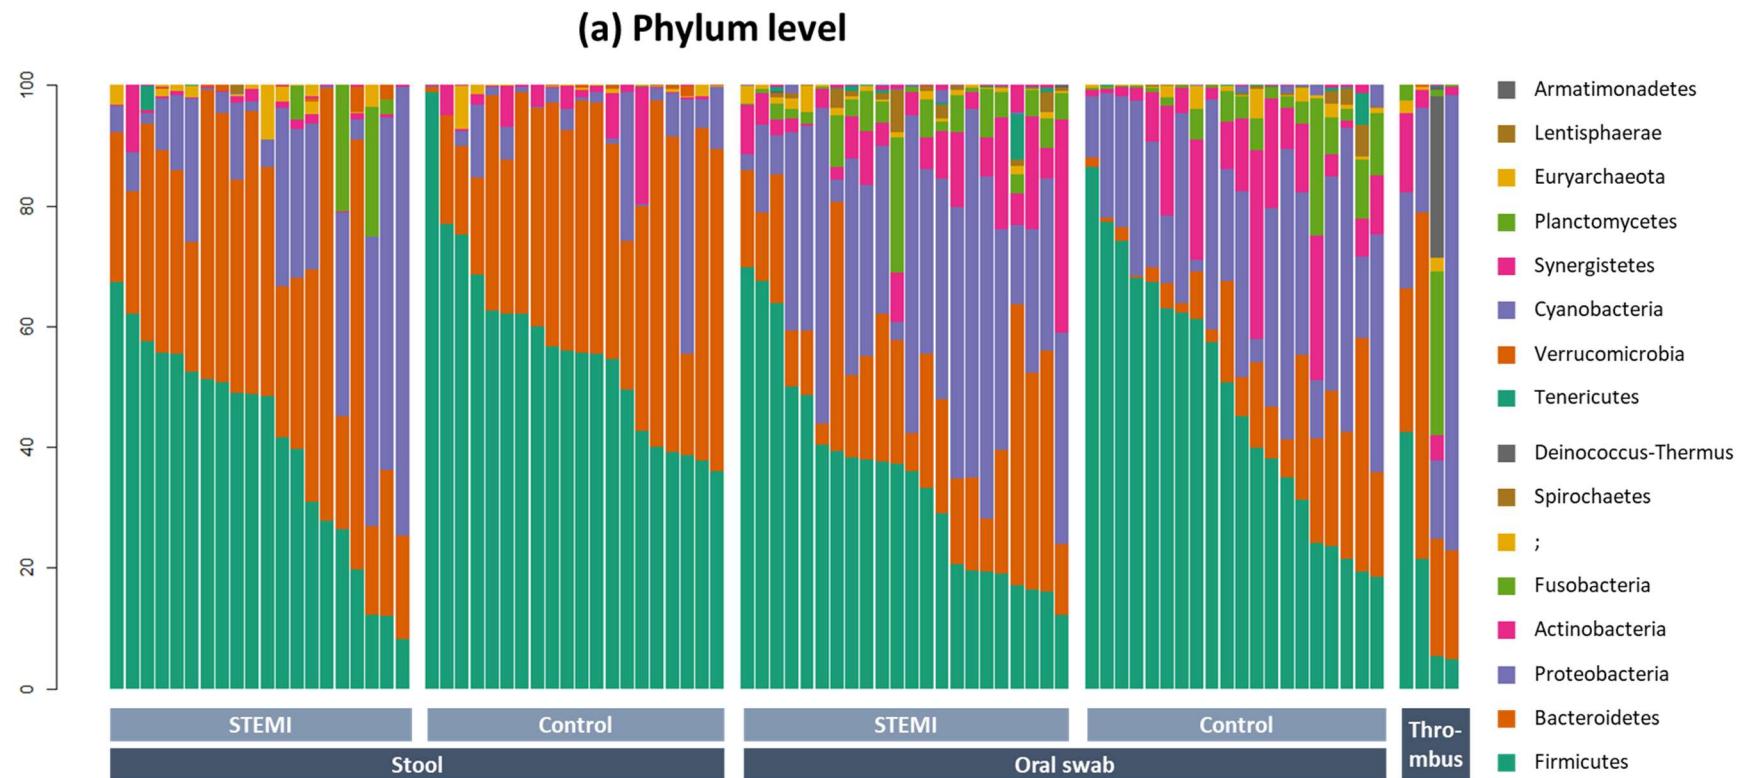

Shannon

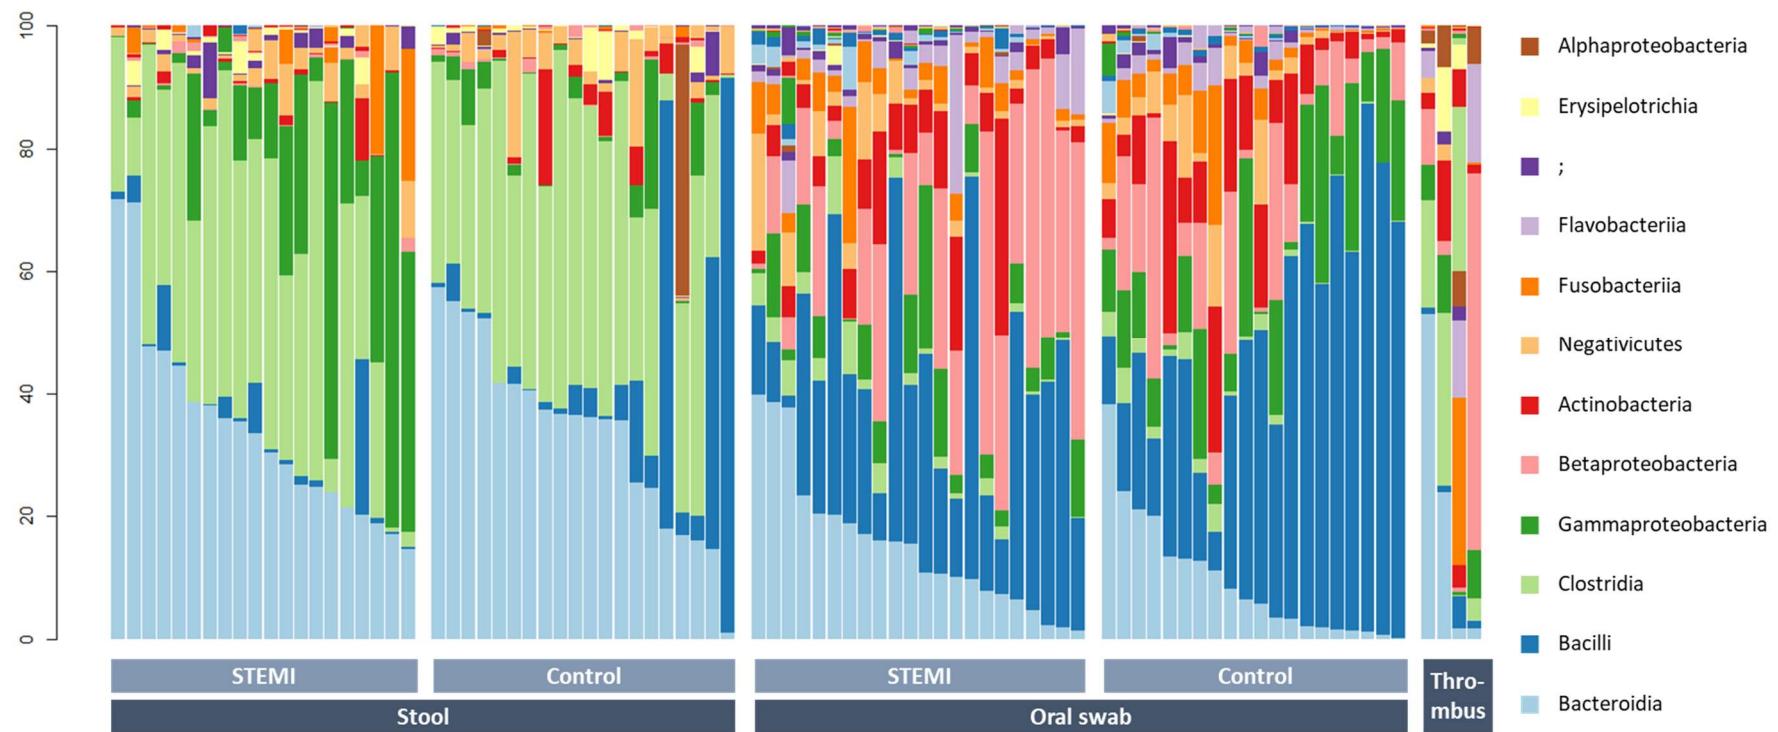

Inverse Simpson

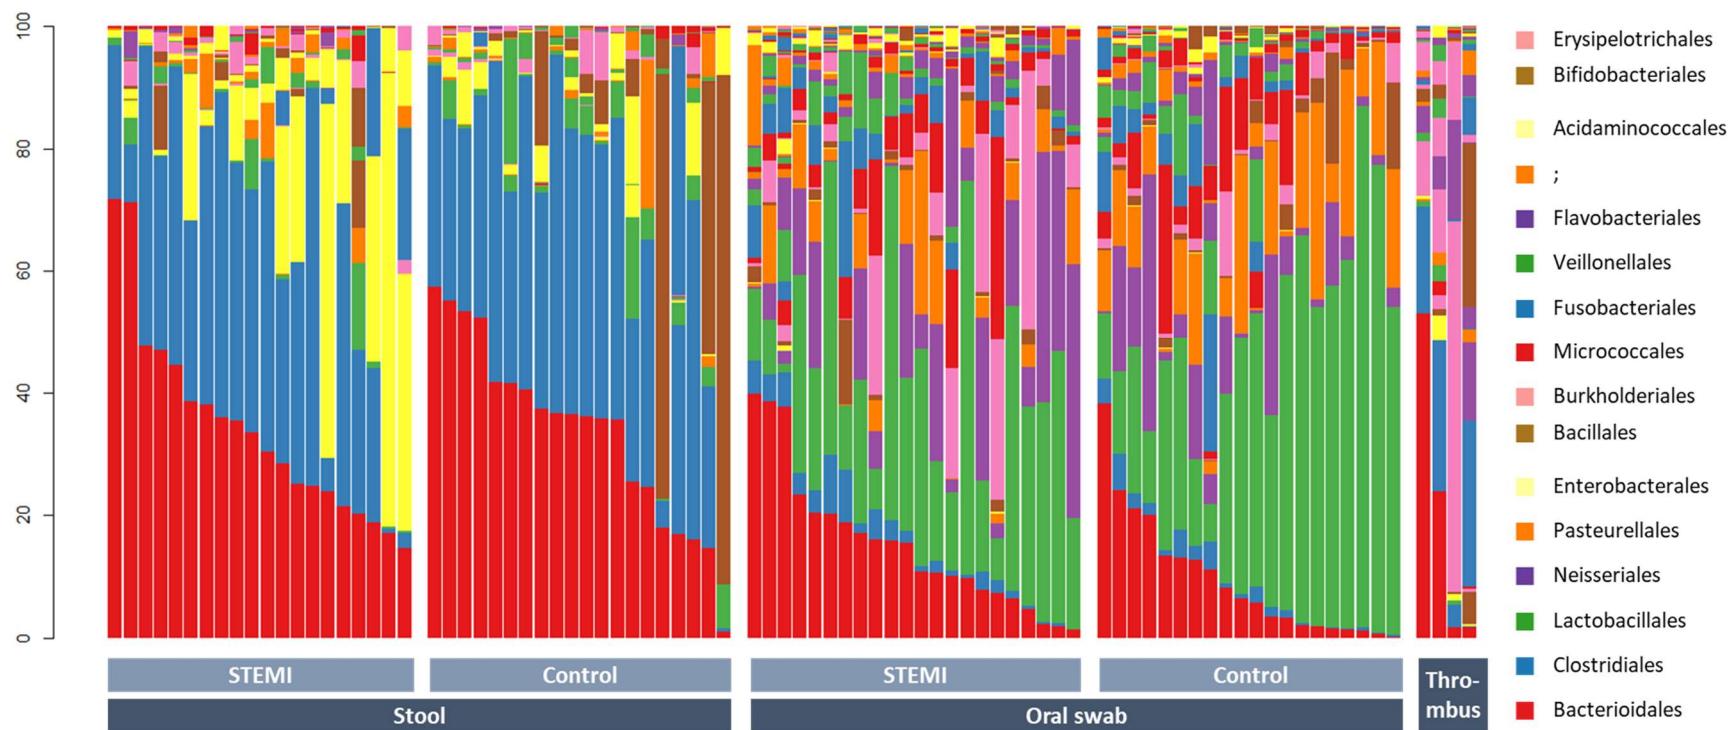

Supplementary Figure 4. Bar plot showing relative abundance at each taxonomic level ((a) Phylum, (b) Class, (c) Order, (d) Family, (e) Species except for the genus level which is presented in Figure 2) in the stool, oral, and thrombus microbiome of the patient and control groups.

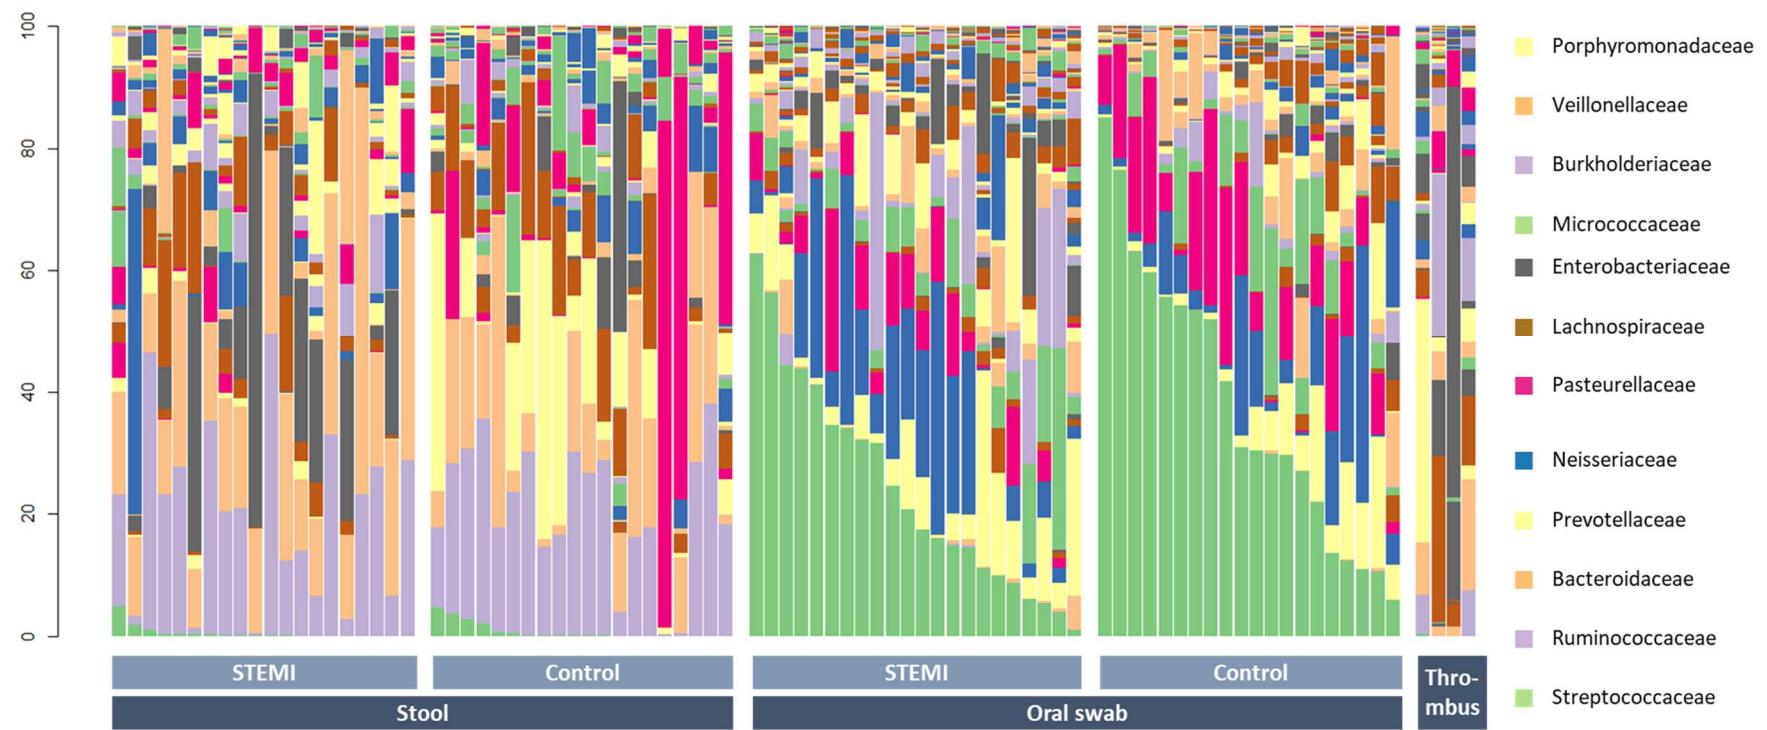

(b) Class level

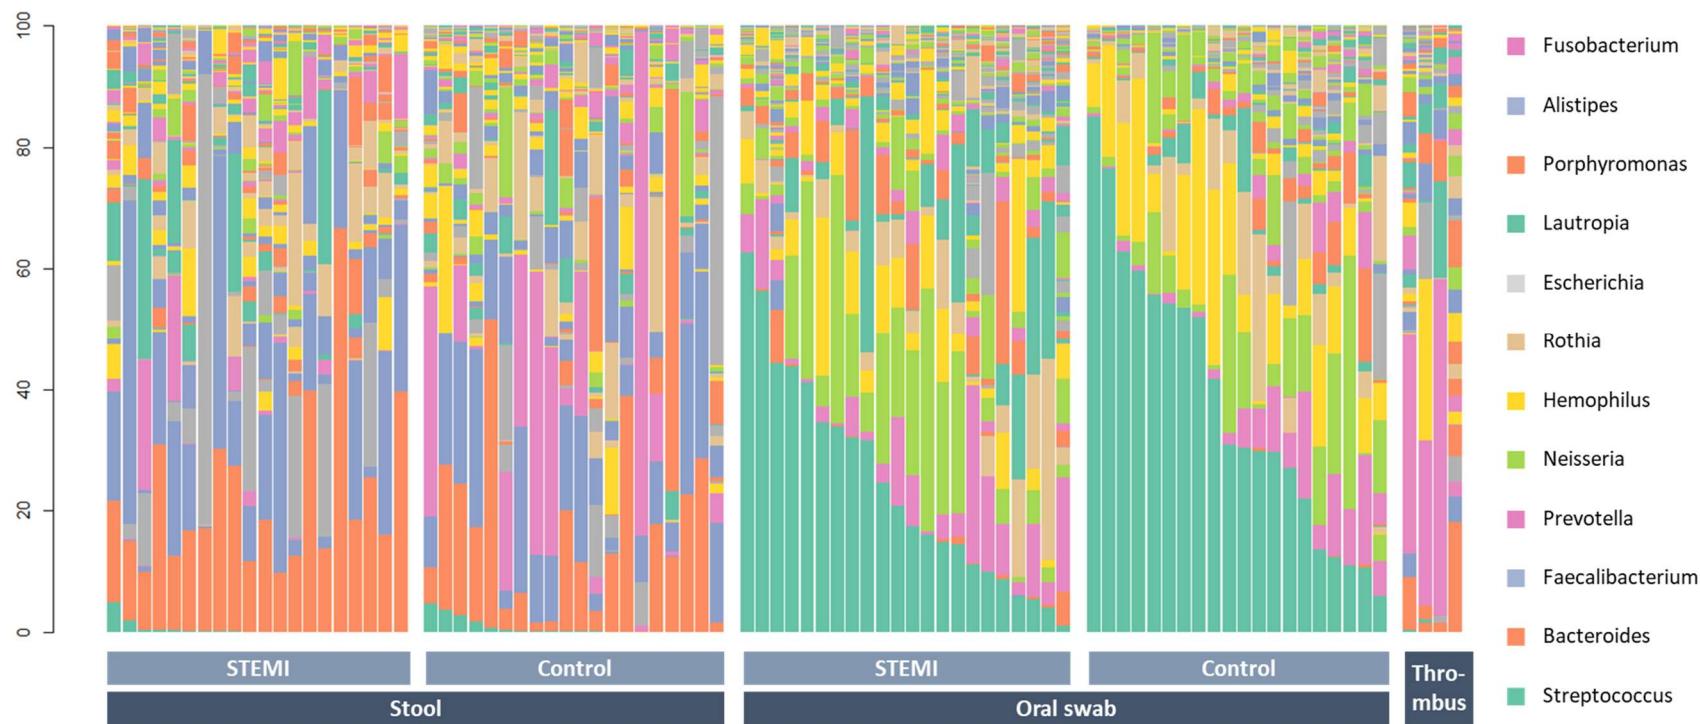

(c) Order level

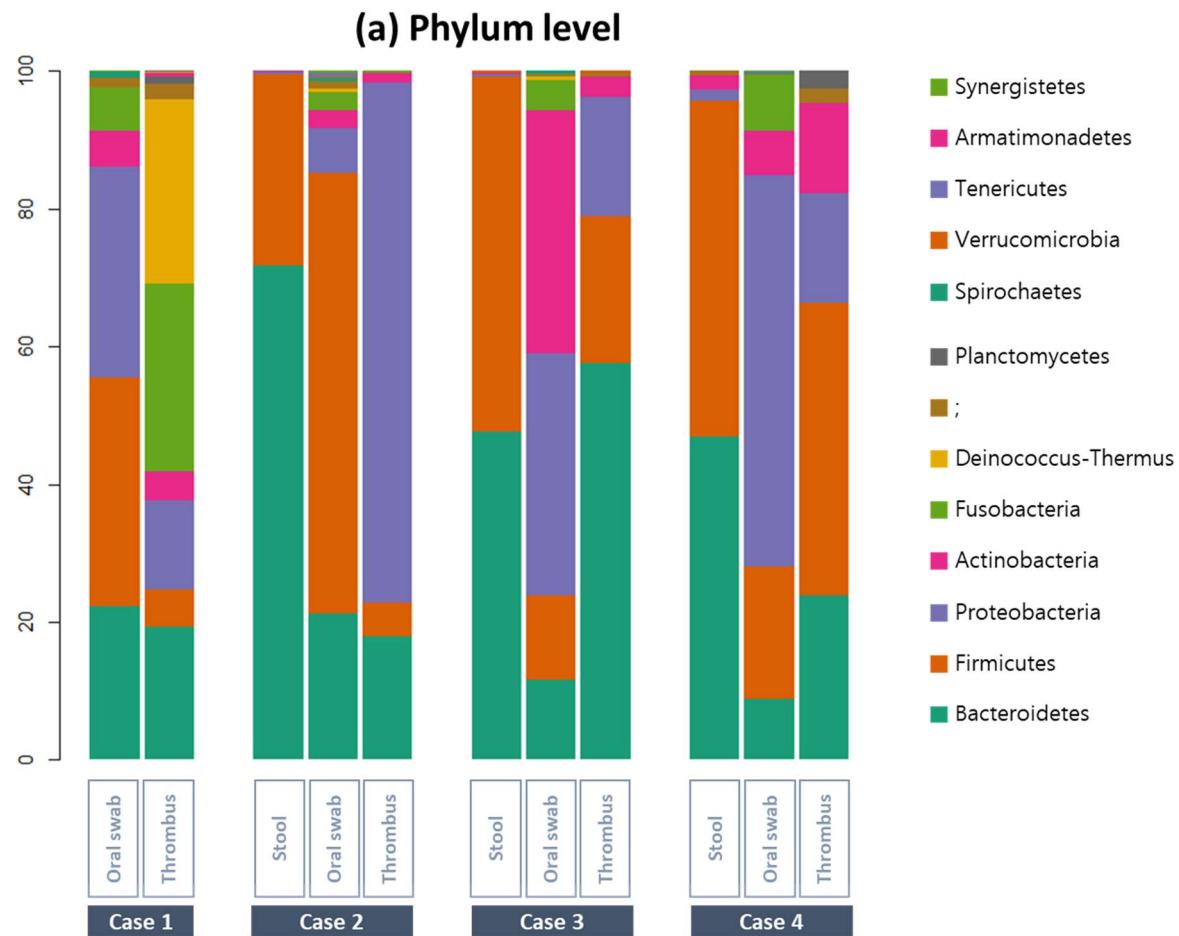

(d) Family level

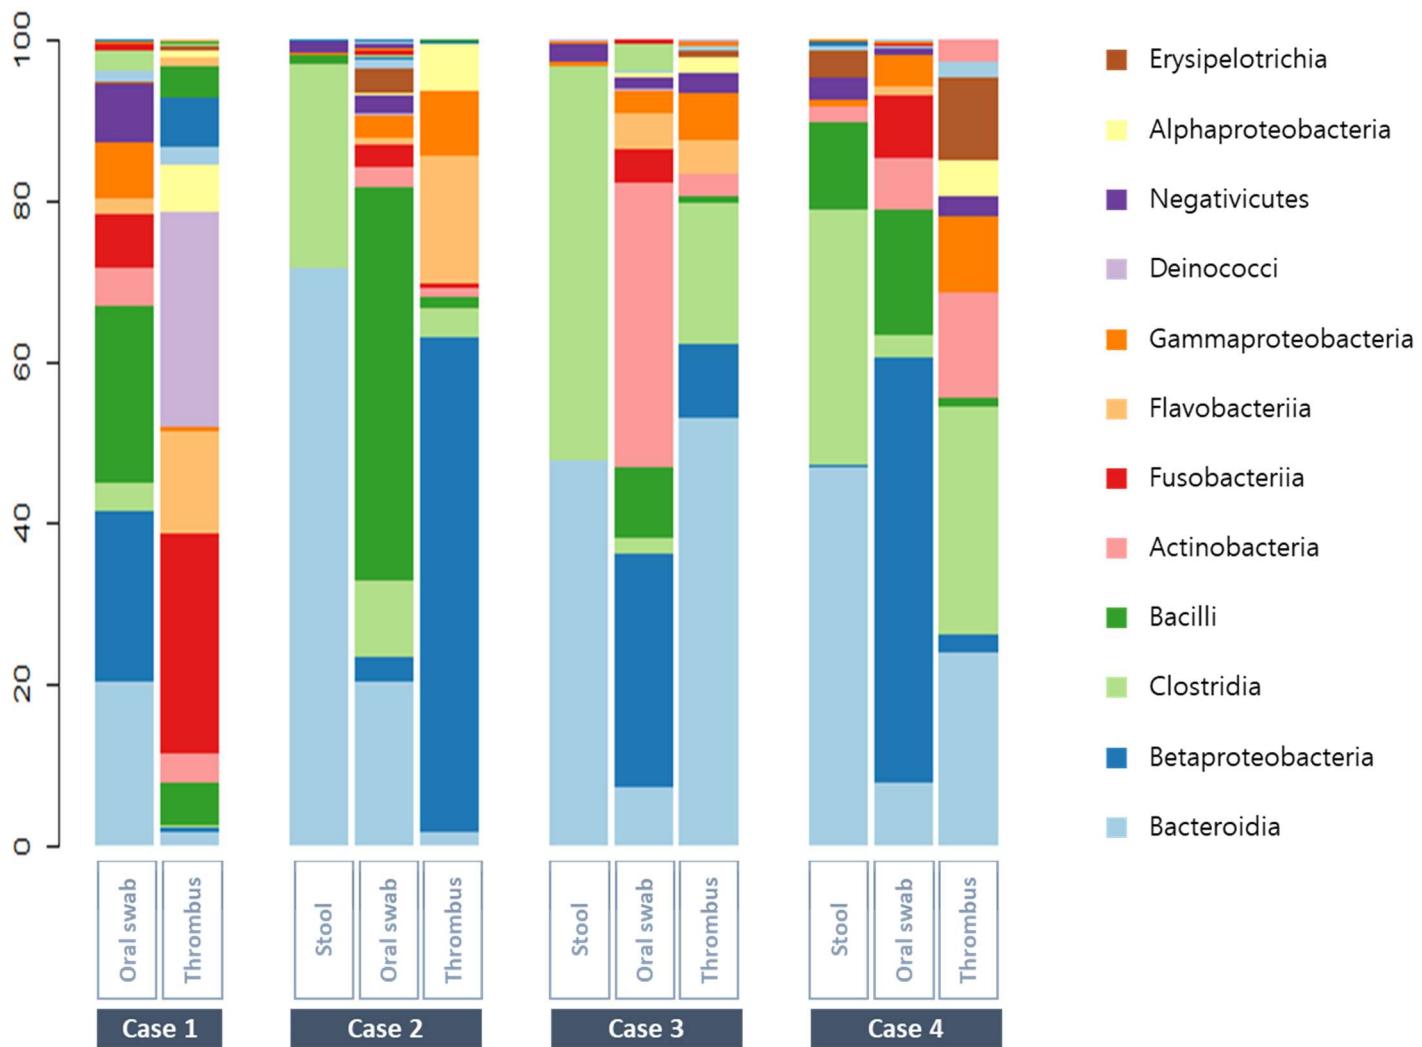

(e) Genus level

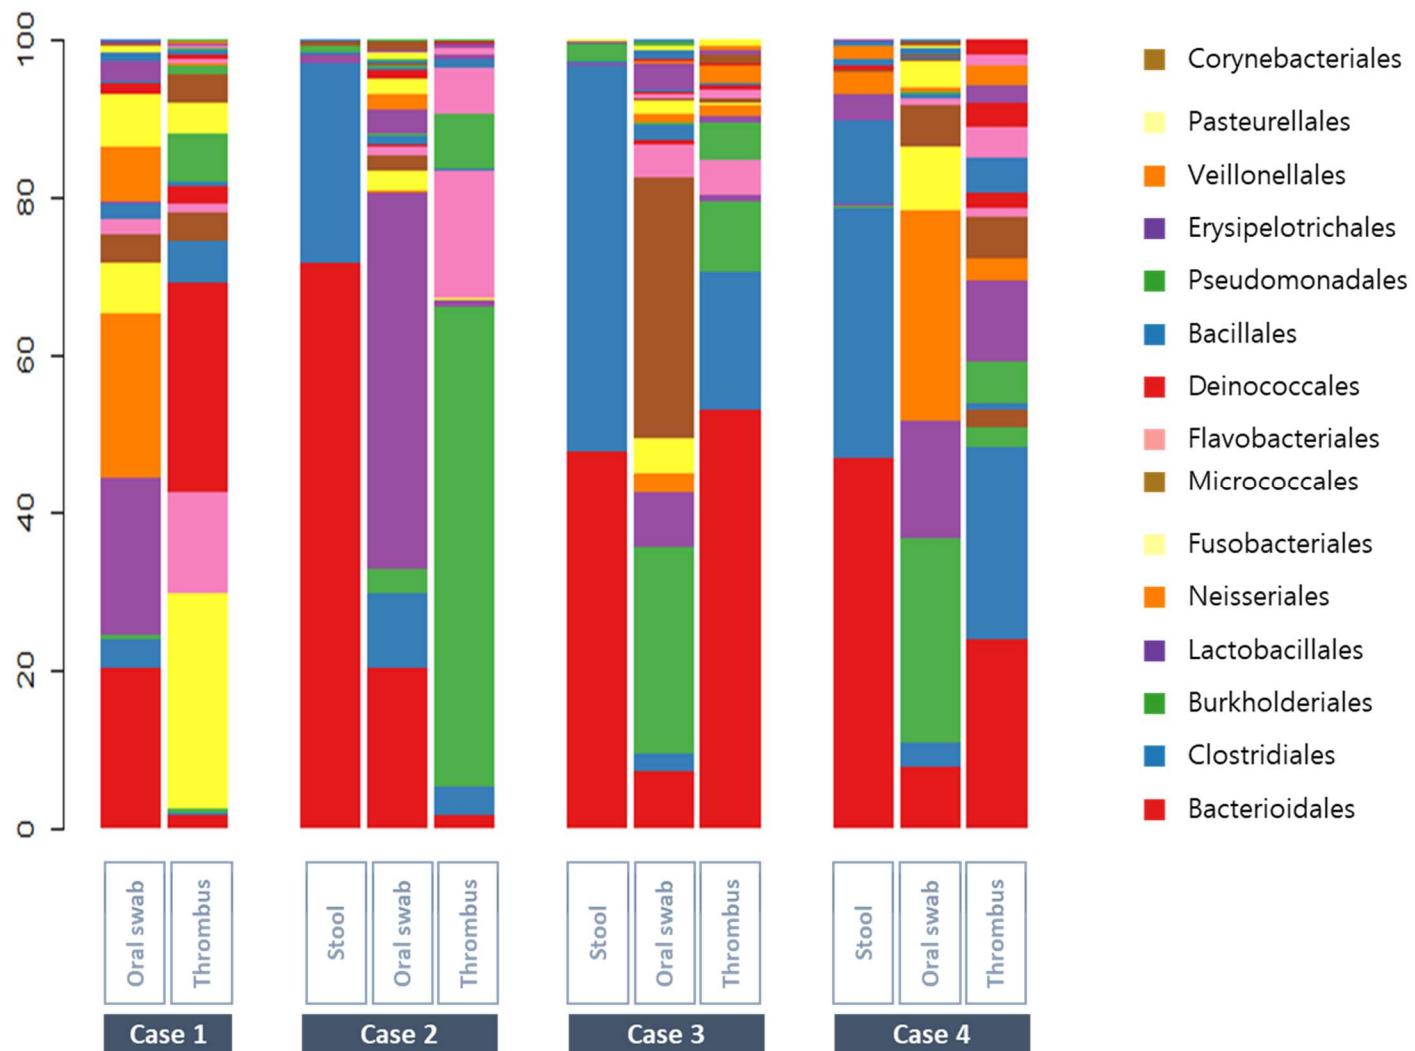

Supplementary Figure 5. Bar plot showing the side-by-side comparison of the thrombi, oral, and gut microbiota of individual patients at each taxonomic level ((a) Phylum, (b) Class, (c) Order, (d) Family, (e) Species).

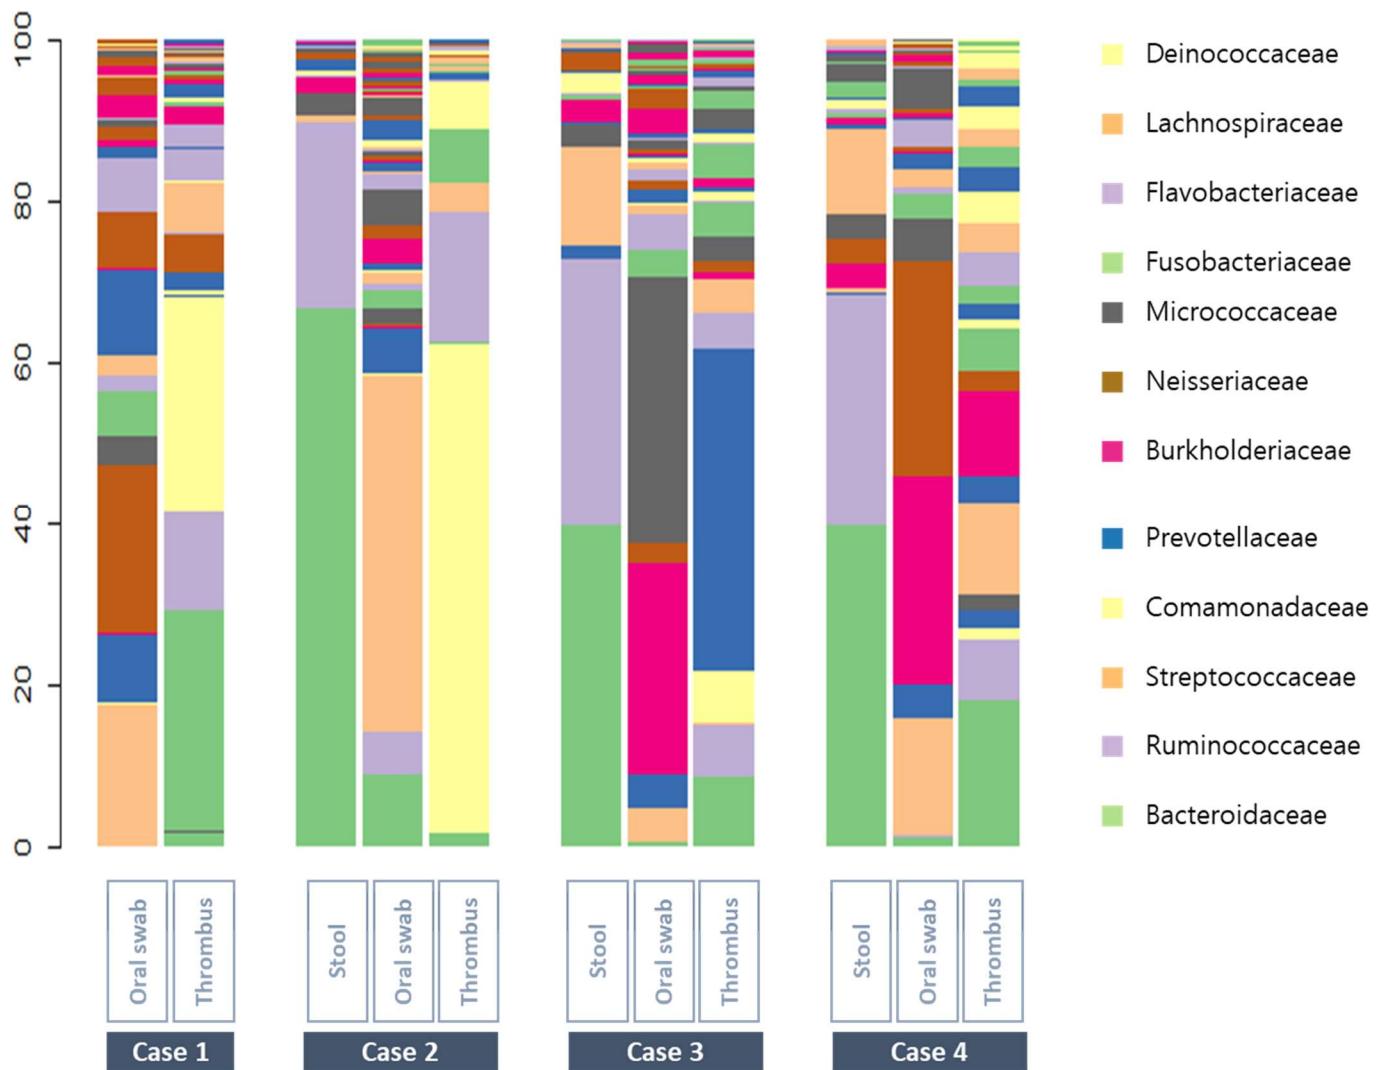

(b) Class level

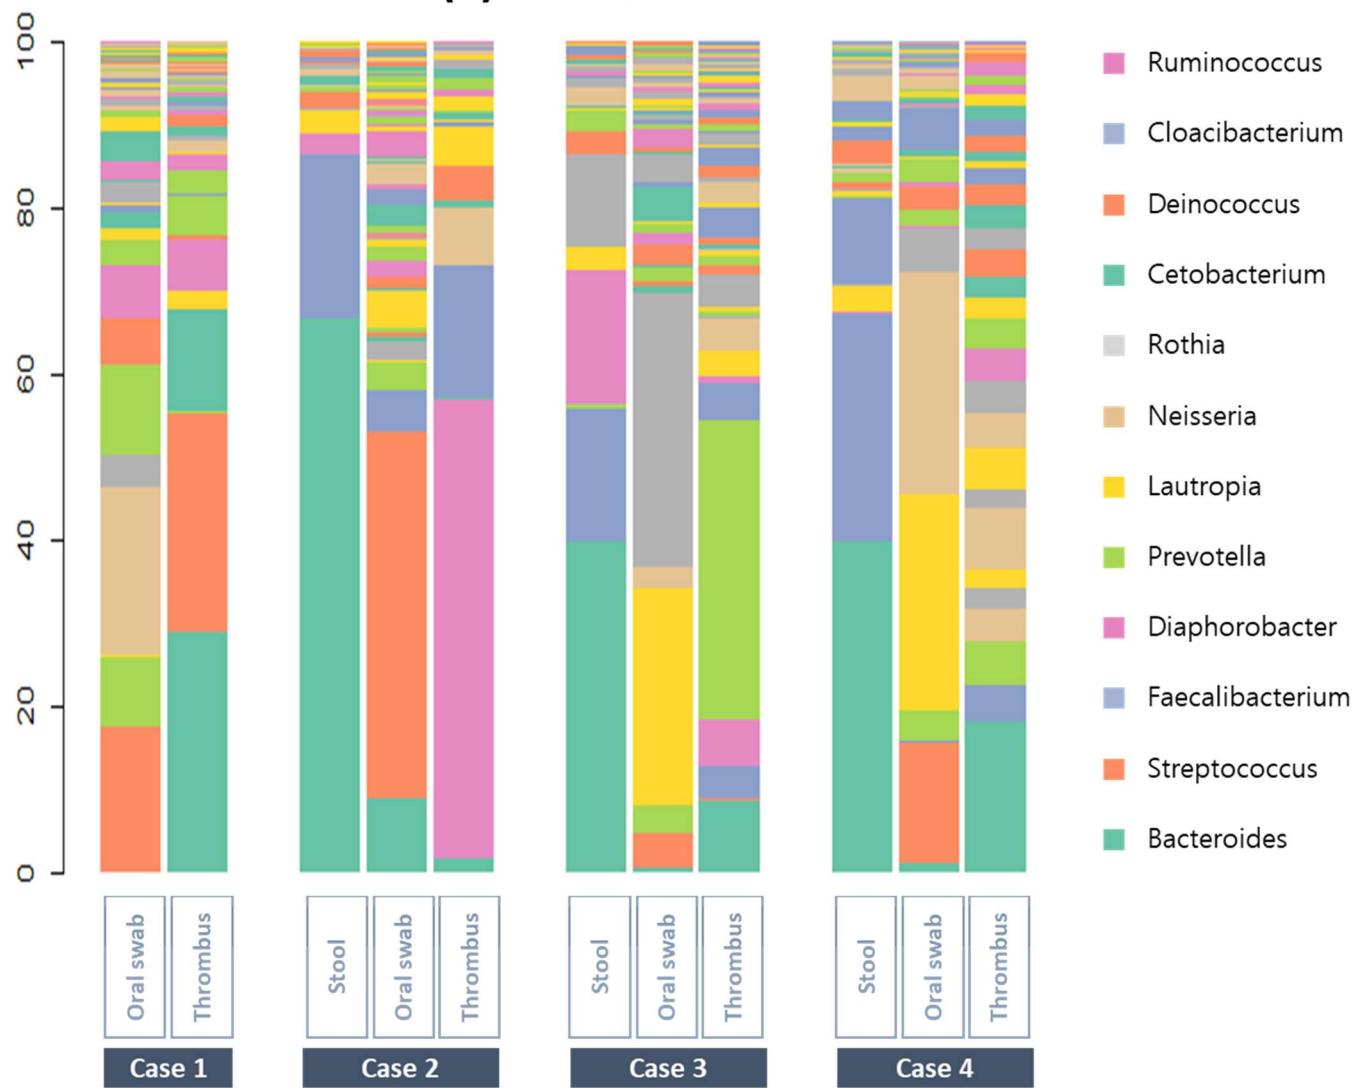

(c) Order level

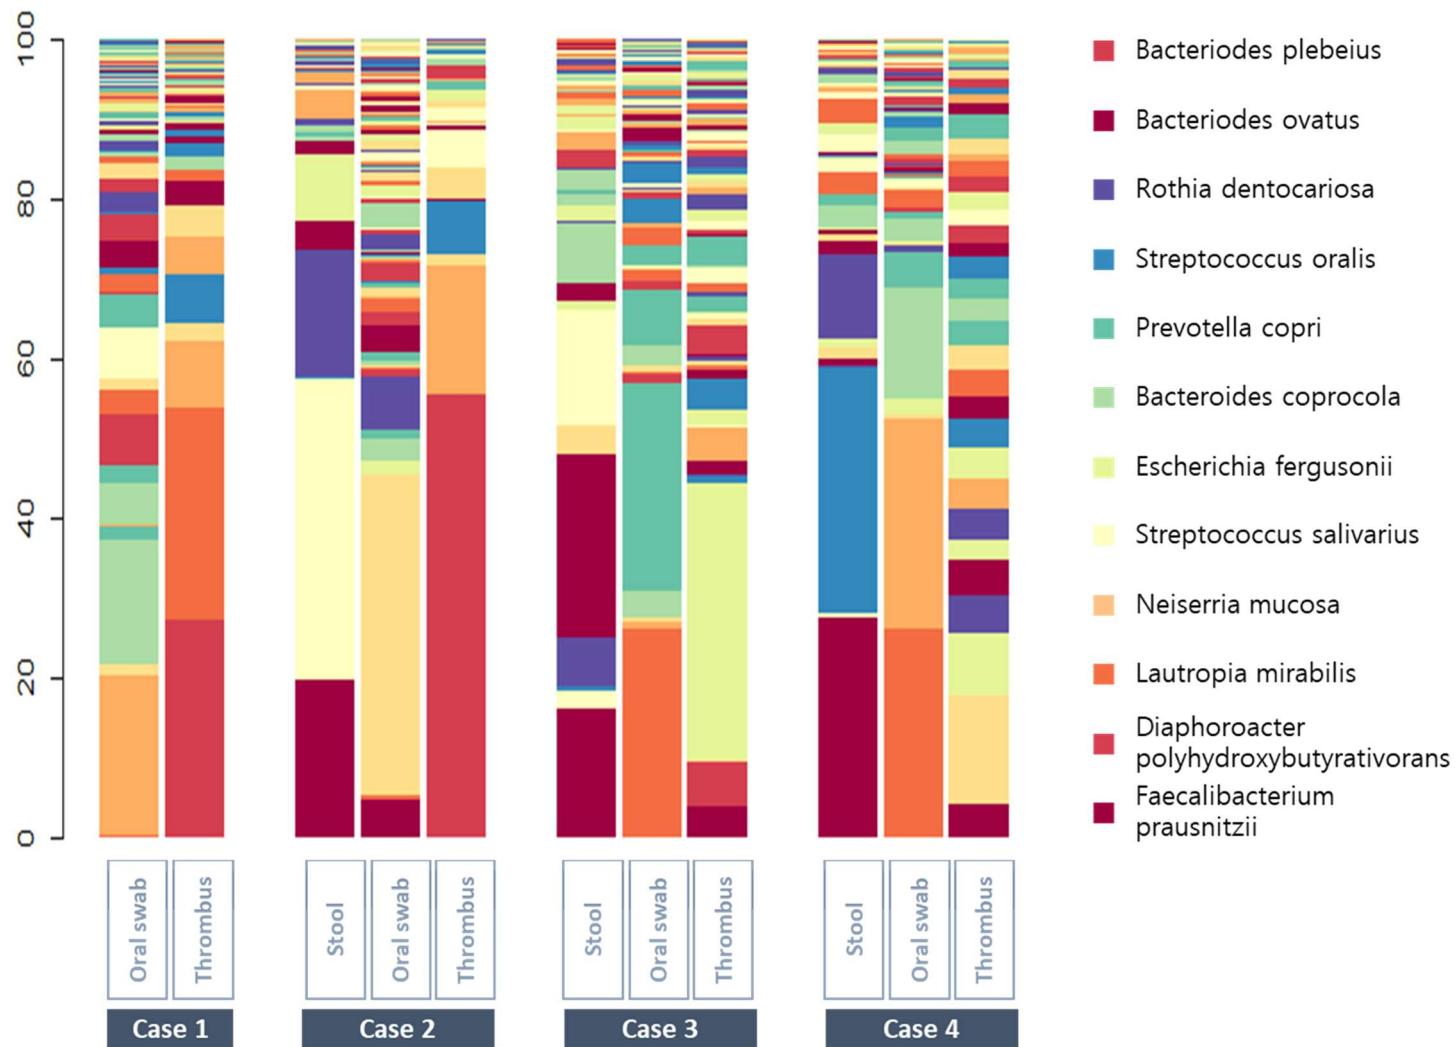

(d) Family level

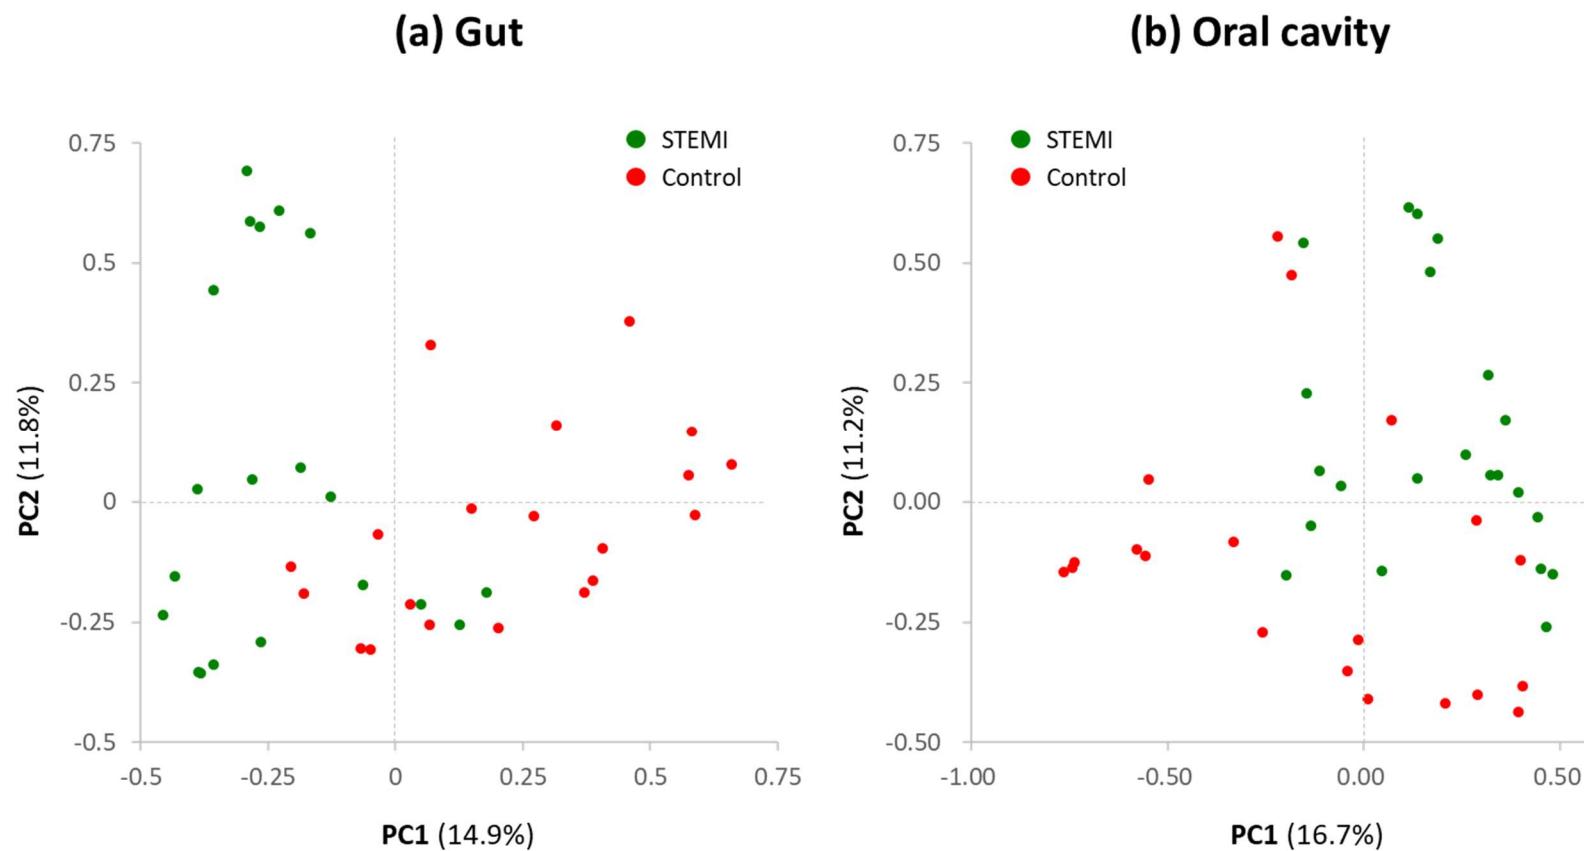

(e) Genus level

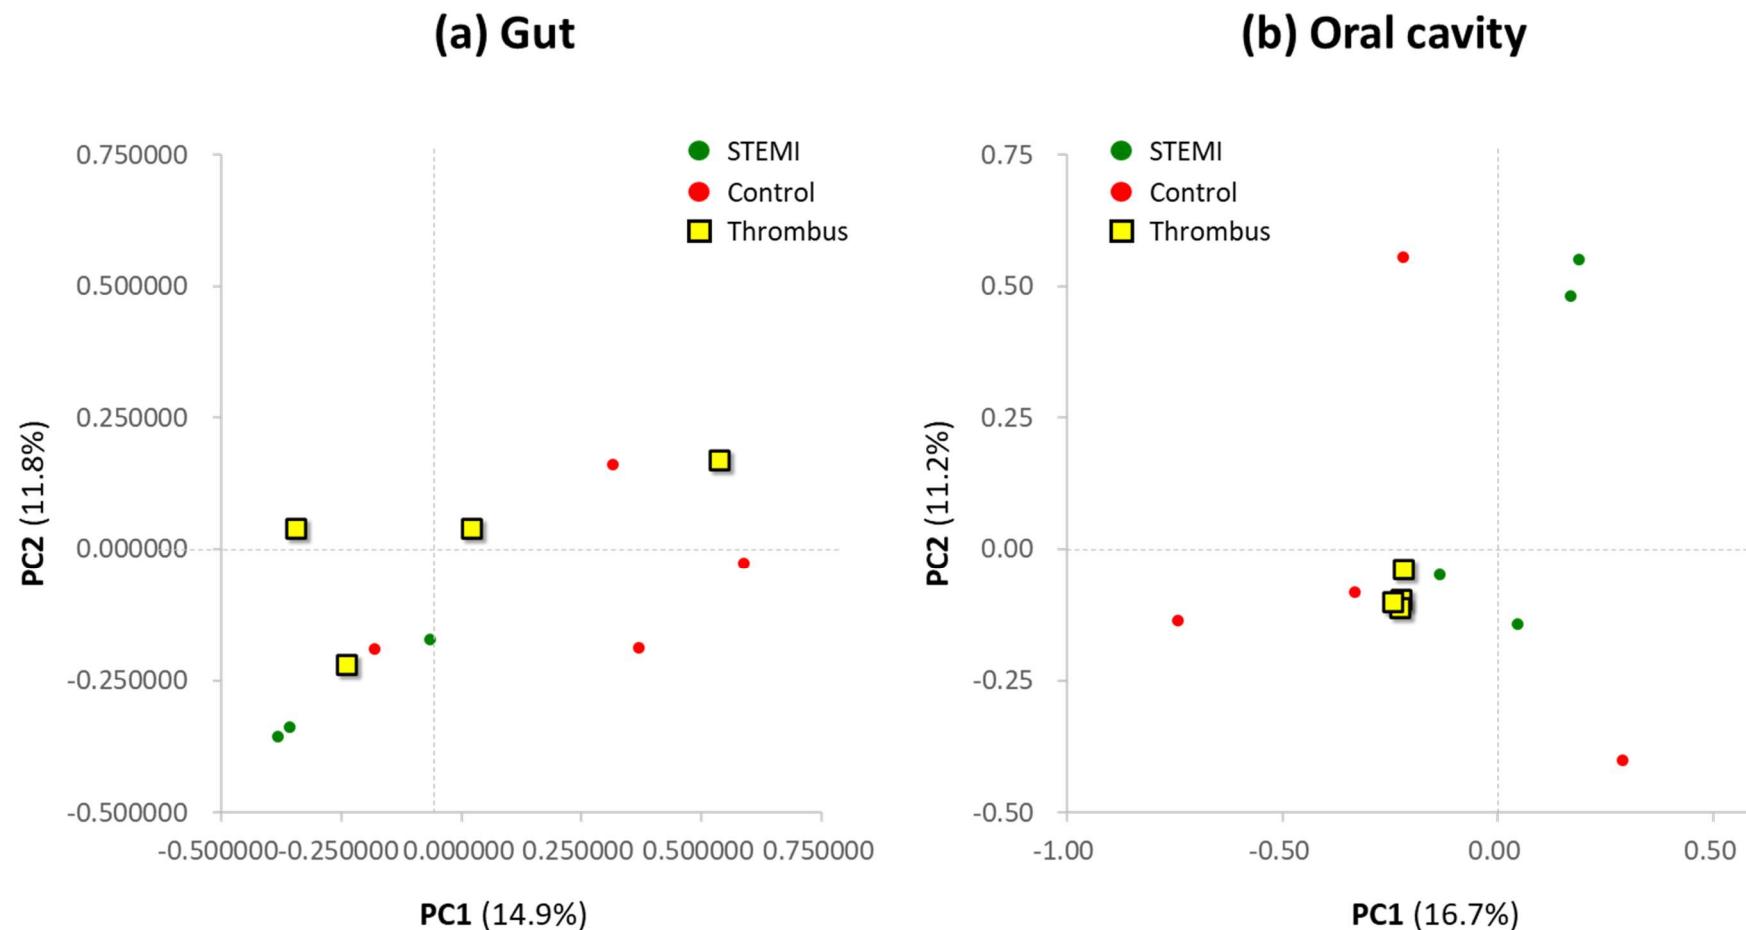

(f) Species level

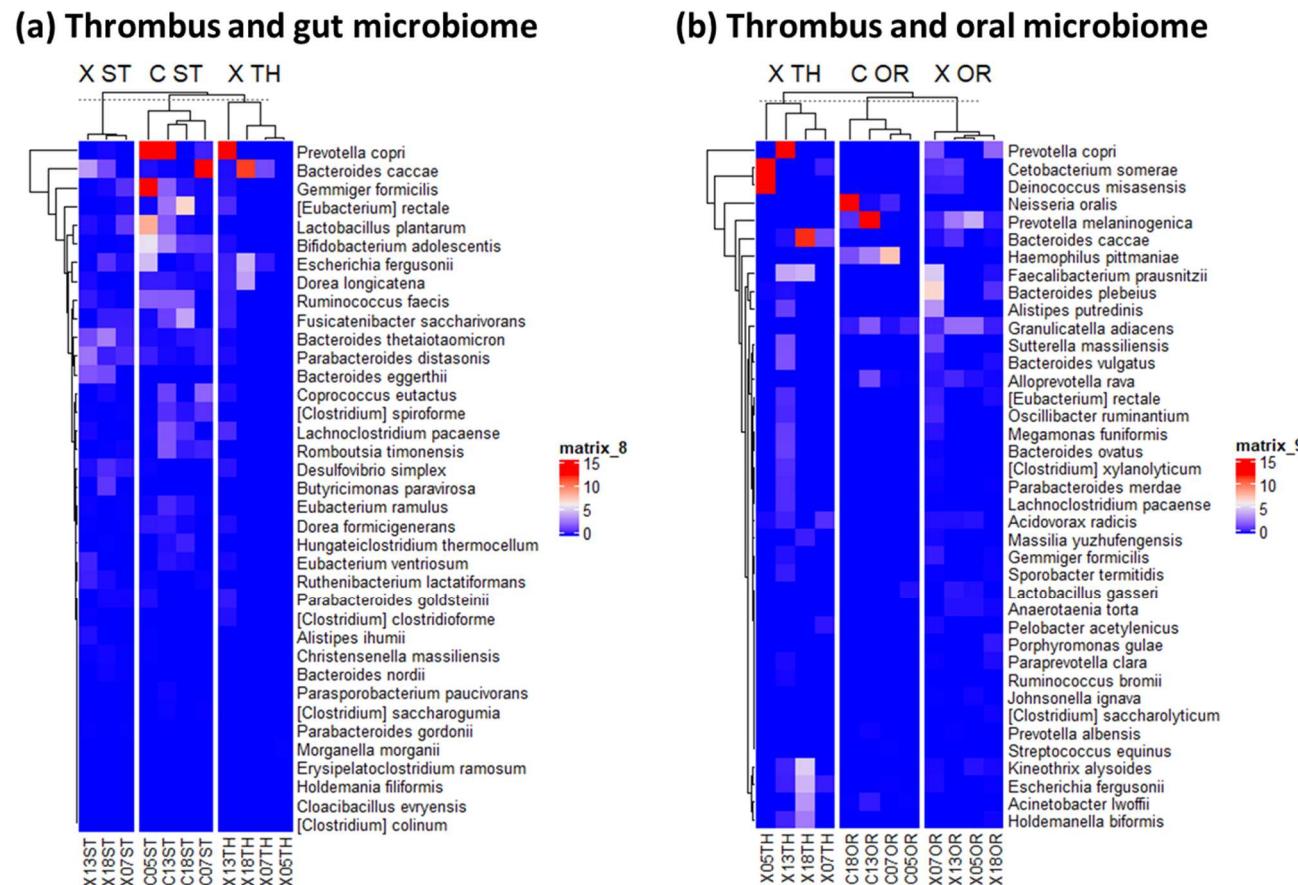

Supplementary Figure 6. Beta-diversity of (a) the gut microbiome and (b) the oral microbiome using principal coordinate analysis (PCoA). OTUs of both stool and oral microbiomes showed different clustering between groups suggesting phylogenetic closeness of the microbial communities within each group.

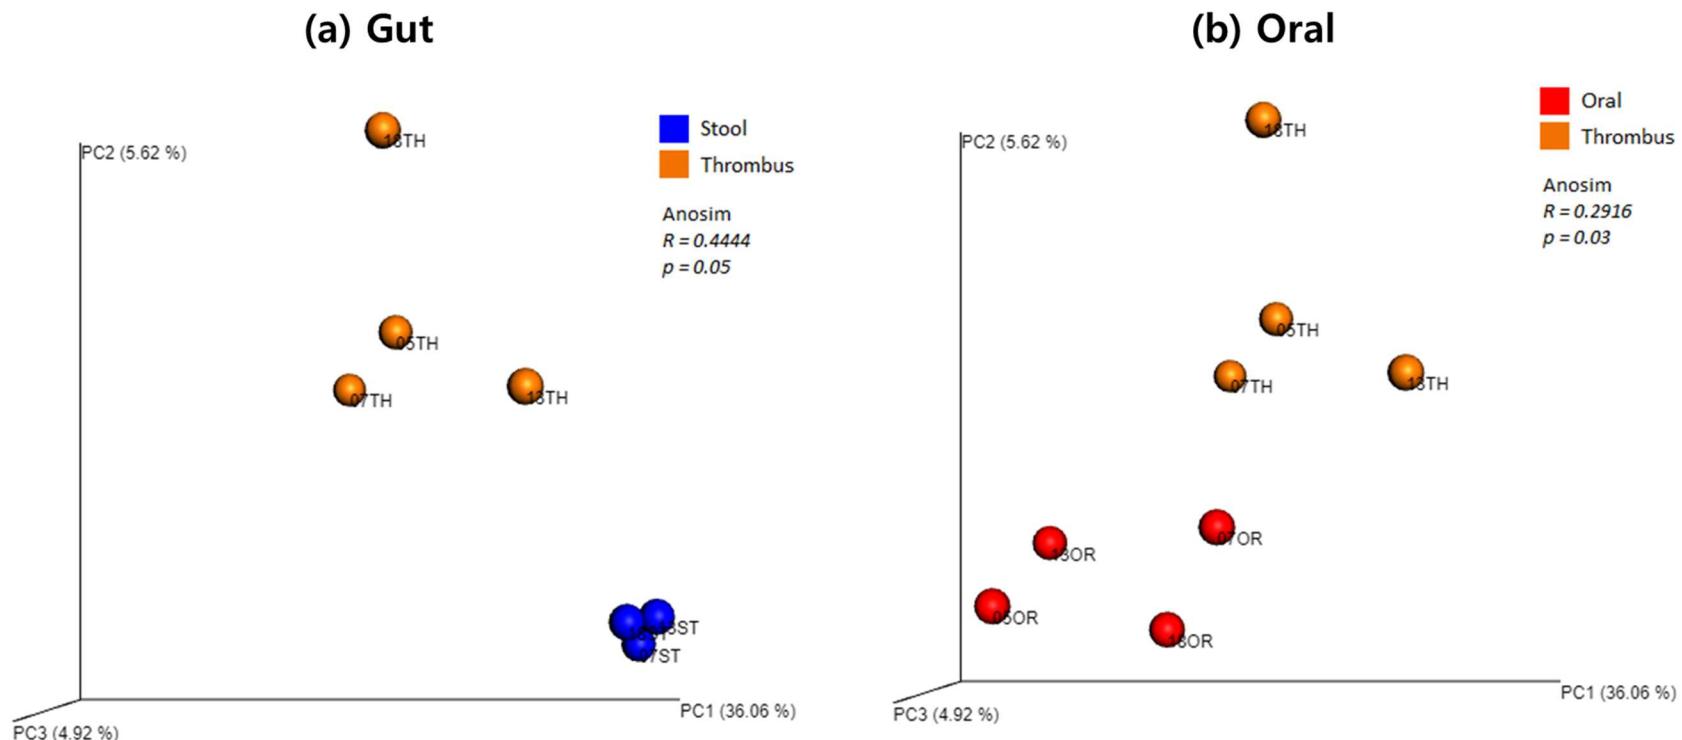

Supplementary Figure 7. Beta-diversity of (a) the gut microbiome and (b) the oral microbiome matching with individual patients with thrombi sample, using principal coordinate analysis (PCoA).

Supplementary Figure 8. Heatmap of the thrombi, oral, and gut microbiota of individual patients at the species level. Relative abundance ratios of selected biomarkers are depicted for (a) stool and thrombus, and (b) oral swab and thrombus. The blue color represents lower abundance, white color represents intermediate abundance and red represents the highest abundance.

Supplementary Figure 9. Analysis of similarities (ANOSIM) was performed to compare the matrix of rank dissimilarity. The dissimilarity between the stool and thrombus samples was larger than that between the oral and thrombus samples (unweighted R=0.444 and 0.2916, respectively)

Supplementary Table 1. Full taxonomic comparative analysis of gut microbiome

Kingdom	Phylum	Class	Order	Family	Genus	STEMI	Control	Unadjusted P-value	FDR-adjusted P-value
