Table 4. Unadjusted odds ratios with 95% confidence intervals (95% CI) and *p* values for factors longitudinally correlated with recent unintentional non-fatal overdose among marginalised women in B.C., Canada, [2010-2018] (*N* = 696)

Characteristic	Odds Ratio (95% CI)	<i>p</i> value
Child apprehended (yes vs. no)	1.82 (1.24 – 2.67)	0.002
Indigenous (yes vs. no)	1.69 (1.15 – 2.49)	0.008
Ever homeless (yes vs. no)	4.94 (2.33 - 10.48)	<0.001
Recently homeless† (yes vs. no)	1.60 (1.11 – 2.30)	0.012
Sex work† (yes vs. no)	1.33 (0.92 – 1.91)	0.134
Lifetime sexual or physical intimate partner violence (yes vs. no)	2.16 (1.20 – 3.88)	0.010
Ever removed from parents (yes vs. no)	2.25 (1.51 – 3.34)	<0.001
Age (per year older)	1.00 (0.98 – 1.02)	0.907
Education (high school) (yes vs. no)	0.63 (0.42 – 0.93)	0.020
Food insecurity† (yes vs. no)	1.89 (1.27 – 2.81)	0.002
Main source of income† (sex work vs. formal employment)	1.45 (0.73 – 2.86)	0.286
(no formal employment vs. formal employment)	1.54 (0.81 – 2.92)	0.188
