Table S2. Protease selectivity of select compounds against Chymotrypsin, Cathepsin L and Trypsin. Percentages of remaining hydrolysis activity of each protease were measured in the presence of the compounds at concentrations 100, 33.3 and 11.1 μ M and calculated relative to enzymatic activity in the presence of DMSO. Results are means from two independent experiments and each in triplicate.

	Enzyme activity % at indicated compound concentrations								
	Chymotrypsin			Cathepsin L			Trypsin		
	100 μ M	33.3 μ M	11.1 μ M	100 μ M	33.3 μ M	11.1 μ M	100 μ M	33.3 μ M	11.1 μ M

Supplementary Experimental section

Materials: α -Chymotrypsin (cat. No. C4129), Trypsin from porcine pancreas (cat. No. T-8253) and Cathepsin L from human liver (cat. No. C6854) were purchased from Sigma-Aldrich. Suc-LLVY-AMC, Z-LLE-AMC, Z-LRR-AMC, Ac-ANW-AMC and Suc-LY-AMC (cat. No. S-260) was from Boston Biochem and Z-FR-AMC (cat. No. GWB-E9DD43) was from GenWay Biotech. Proteasome-Glo™ Chymotrypsin-Like Cell-Based Assay kit (cat. No. G8660) and CellTiter-Glo® Luminescent Cell Viability Assay kits (cat. No. G7570) were from Promega (Madison, WI). Complete Media (CM) is RPMI 1640 (LTI 11875-085) with 10% FCS (cat. No. 26140), 1% L-glutamine (cat. No. 25030-081), 50 μ g/ml gentamicin (cat. No. 15750-060) were from Gibco. Separation Media (SM) is RPMI 1640 (LTI 11875-085) with 2.5mM EDTA (Gibco 15575-038). Lympholyte®-H Lymphocyte Separation Medium (CL5020) was from Cedarlane Laboratories. 96-well round bottom plates (Falcon 3077). Unifilter GF/C plates (cat. No. 5007185) were from Packard. ³H-thymidine (Net-027005MC) was from PerkinElmer.

Protease selectivity assays

Protease selectivity of select compounds was performed as reported with minor changes.¹ Briefly, 1 μ L of select compound at concentrations of 100, 33.3 and 11.1 μ M in DMSO were spotted into the bottom of a black 96-well plate. Reaction buffer (100 μ L, see table below) containing proteases and their substrates were dispensed into each well, and the plate was then spun in a simple benchtop plate centrifuge at 1000 rpm for 1 min, followed by recording the fluorescence of the product AMC (λ_{ex} 360 nm and λ_{em} 460 nm) on a SpectraMax M5 plate reader over 1.5 h. Percentages of remaining activity of proteases were calculated relative to DMSO.

Protease (final con.)	Substrate (final con.)	Buffer
α -Chymotrypsin (2 nM)	Suc-Leu-Tyr-AMC (50 μ M)	50 mM Tris, 100 mM NaCl, 5 mM CaCl ₂ , 0.01% Tween 20, pH 8.0
Trypsin from porcine pancreas (4 nM)	Z-FR-AMC (12 μ M)	50 mM Tris, 100 mM NaCl, 5 mM CaCl ₂ , 0.01% Tween 20, pH 8.0
Cathepsin L from human liver (2 nM)	Z-FR-AMC (37.5 μ M)	100 mM sodium acetate, 5 mM DTT, 1 mM EDTA, pH 5.5

Human PBMC Proliferation Assay

All Informed consents were obtained from blood donors after the nature and possible consequences of the studies were explained.

PBMC Isolation- The procedure was carried out as our previous report.¹ In brief, the EDTA-treated blood samples from donors were separated by Ficoll as follows: The syringes of blood were inverted to mix and divided equally among 50ml tubes (~20ml/tube) containing 20ml separation media (SM), RPMI 1640 with 2.5mM EDTA, and carefully loaded on top of 10ml of Ficoll in each tube. Tubes were spun at 1800 rpm for 20 min (low brake). The interfaces from each two tubes were combined into one 50ml tube, brought up to 45ml with SM and spun at 1700 rpm for 8 min. Supernatant was aspirated; and cells were resuspended in 45ml SM and spun at 1100 rpm (to remove platelets) for 8 min. Cells were then resuspended in Complete Media (CM).

Methods: These experiments were carried out as our previously reported with slight changes.¹ Compounds were tested in a series 3x concentration dilution (final concentrations were from 3 μ M to 0.56 nM as indicated in plate map). 10 μ l of each appropriate dilution in CM were added

to the appropriate wells. The PBMC cells in CM at 1×10^6 /mL, 100 μ l/well (100,000 cells/well) were then added to the appropriate wells of the plates and were incubated for 1hr at 37°C, 5% CO₂ prior to adding the stimuli, 50 μ l Anti-human CD3 at 0.5 μ g/ml. All wells were brought up to 200 μ l with 0.1% DMSO/CM. The plates were incubated at 37°C, 5% CO₂ for 5 days. On day 5, 100 μ l supernatant was removed from each well of the PBMC assay plates, and 0.5 μ Ci of ³H-Thymidine in 100 μ l CM was added to each well, and incubated for 6 hours. The assay plates were harvested on a Packard Filtermate Harvester according to the manufacturer's instruction. The plates were dried overnight at room temperature or for 1hr in a 37°C vacuum oven and then 50 μ l/well PerkinElmer Microscint-20 scintillant was added. The plates were then counted on a Packard TopCount scintillation counter.

593.2206	593.2210	-0.4	-0.7	13.5	5.1	C ₂₉ H ₃₅ N ₄ O ₅ F Na S

Single Mass Analysis

Tolerance = 5.0 PPM / DBE: min = -1.5, max = 110.0

Element prediction: Off

Number of isotope peaks used for i-FIT = 4

Monoisotopic Mass, Even Electron Ions

229 formula(e) evaluated with 1 results within limits (up to 20 closest results for each mass)

Elements Used:

C: 0-30 H: 0-37 N: 0-4 O: 0-5 F: 0-1 Na: 0-1 S: 0-1
