

**Fig. S6. VSV $\Delta$ G-BHLD, in large, does not co-localized with the fluid-phase marker, 70 kDa dextran, in CHO-HVEM cells.** CHO-HVEM cells were incubated with 1 mg/ml of rhodamine-B labelled 70 kDa dextran and VSV $\Delta$ G-BHLD (MOI = 1) for one hour at 4°C. Cells were then shifted to 37°C for 20 minutes. Cells were fixed, counterstained with DAPI, and imaged by confocal microscopy. gB was detected by immunofluorescence using the rabbit pAb R68 and anti-rabbit IgG conjugated to FITC. Green = gB (marker for VSV $\Delta$ G-BHLD particles); Red = 70 kDa dextran. Scale bar = 25  $\mu$ m.
