

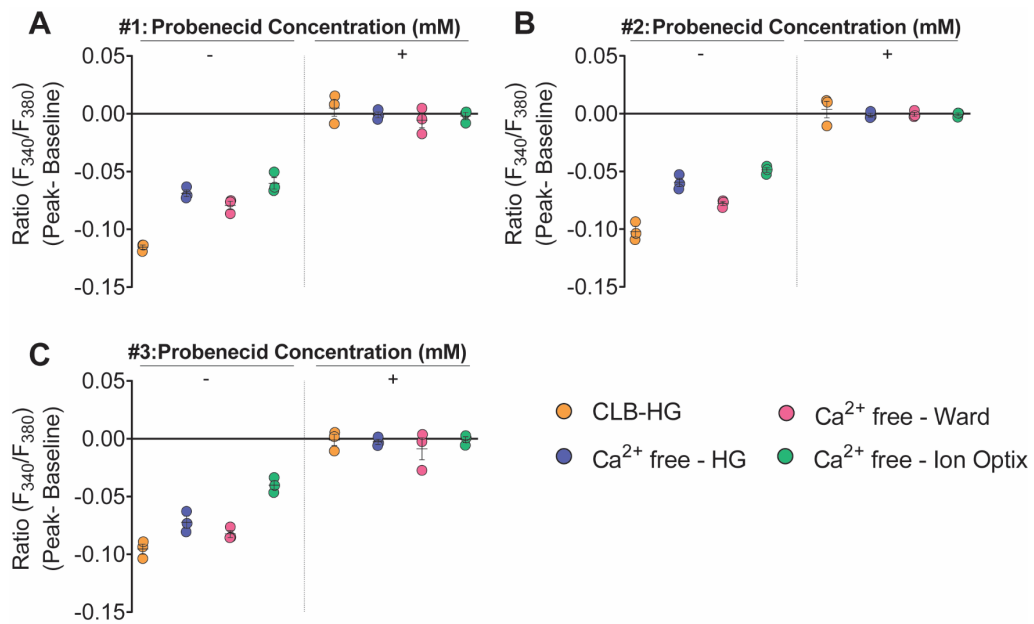

**Figure S7**

**Figure S7: EGTA chelation of calcium tested with different calcium buffers in the absence or presence of probenecid.** Cells loaded with Fura-2/AM in the absence or presence of probenecid (1mM) were stimulated with EGTA in calcium containing and calcium-free buffers (A-C). Data shown as mean  $\pm$  S.E.M for three independent experiments with three replicates in each experiment.
