

**Table S1.** Composition of the diet used in the animal experiment (the diet composition was modified from a standard AIN-93G diet. The ingredients were purchased from Dyets Inc., except corn oil was from a local market in Hadley, MA)

Ingredients	grams/kg
Casein	200
L-Cystine	3
Sucrose	100
Dyetrose	132
Cornstarch	397.5
Cellulose	50
Mineral mix #210025	35
Vitamin mix #310025	10
Choline Bitartrate	2.5
Corn oil	100

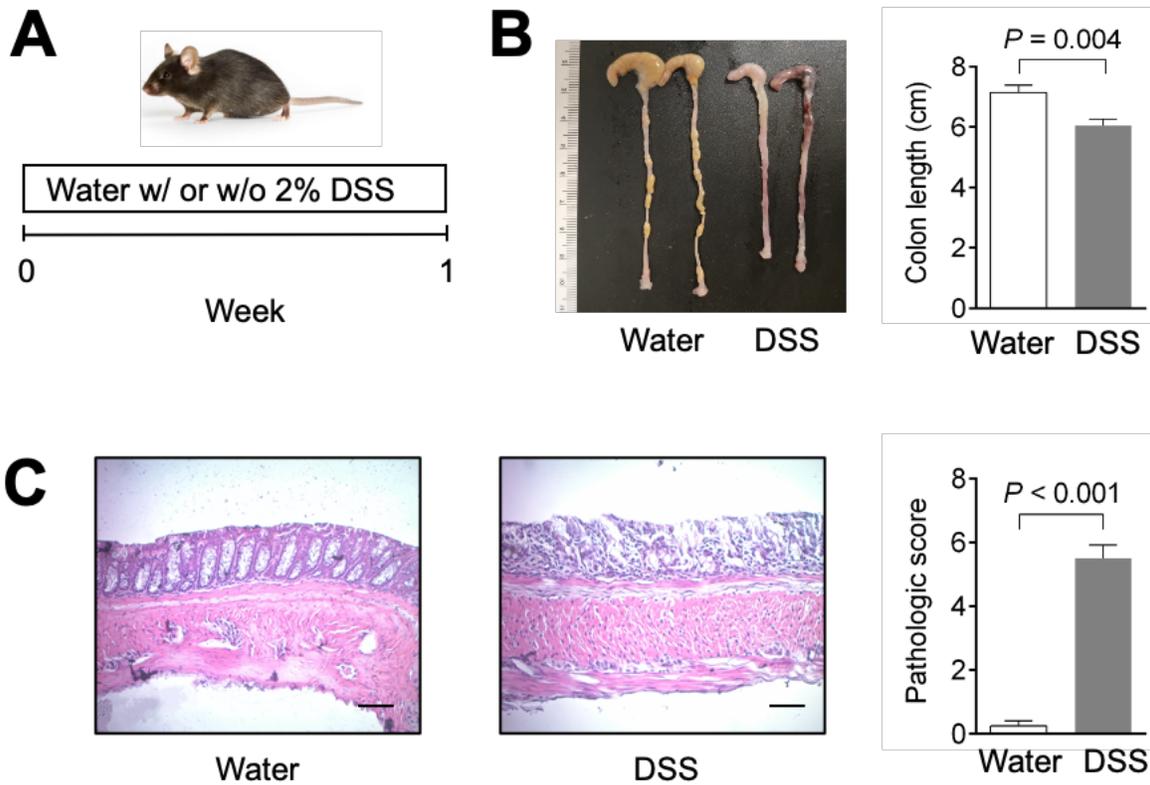

**Table S2.** Sequences of primers used in qRT-PCR

Gene	Forward	Reverse

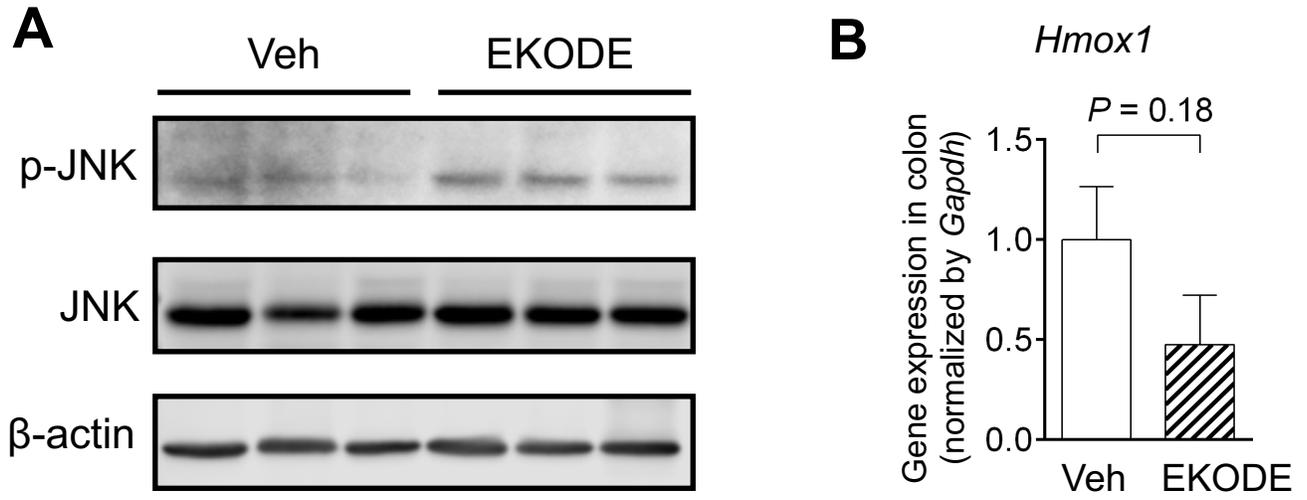

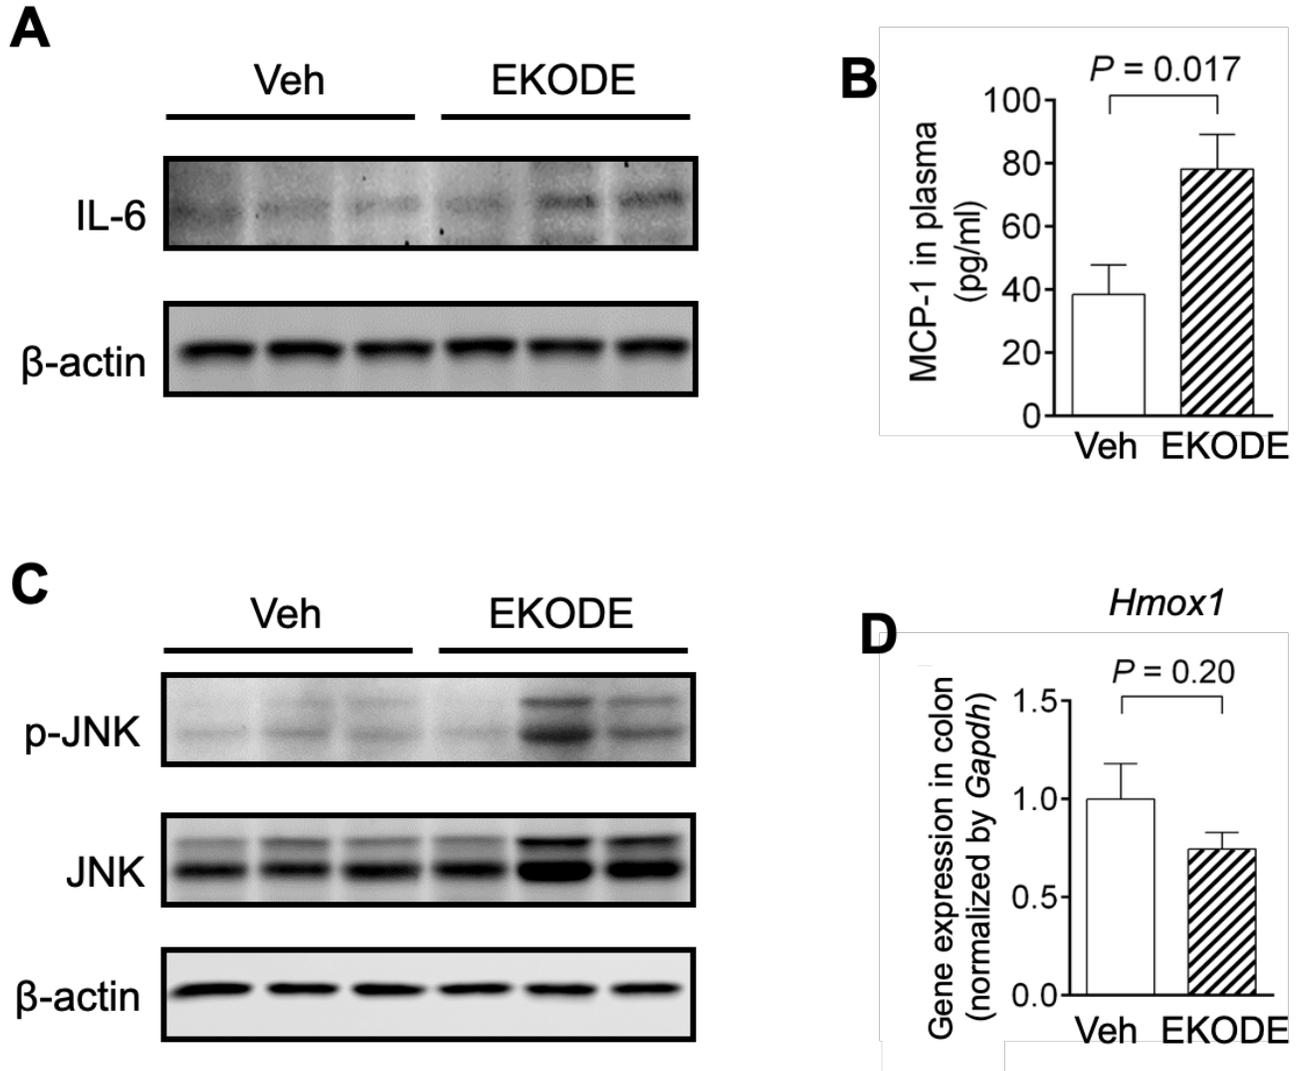

**Figure S2.** Expression of GPX in the TCGA database. The results are mean  $\pm$  SEM. The statistical significance of two groups was determined using Student's t test or Wilcoxon-Mann-Whitney test.

**Figure S3.** Compared with the mice treated with normal drinking water, the mice treated with DSS developed acute colitis. **A**, Scheme of animal experiment. **B**, Colon length (n = 8 mice per group). **C**, H&E staining of colon (n = 8 mice per group, scale bars: 50  $\mu$ m). The results are mean  $\pm$  SEM.

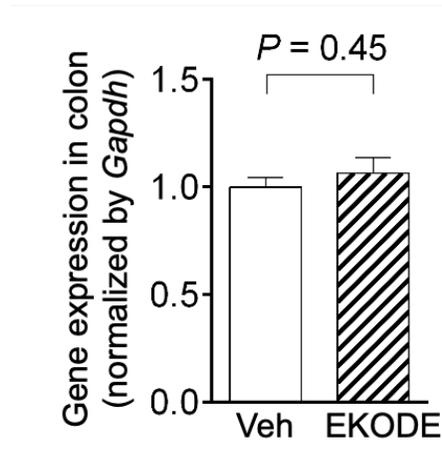

**Figure S4.** Effects of EKODE on (A) colonic expression of phosphorylated JNK (n = 3 per group), and (B) gene expression of *Hmox1* in colon (n = 6-7 per group), in the DSS-induced colitis model in mice. The results are mean  $\pm$  SEM.

**Figure S5.** Effects of EKODE on (A) colonic expression of IL-6 (n = 3 per group), (B) plasma concentration of MCP-1 (n = 7-8 per group), (C) colonic expression of phosphorylated JNK (n = 3 per group), and (D) gene expression of *Hmox1* in colon (n = 7-8 per group), in the AOM/DSS-induced CRC model in mice. The results are mean  $\pm$  SEM.

*Hmox1* expression in  
RAW 264.7 cells

**Figure S6.** Effects of 24-h treatment with 300 nM EKODE on expression of *Hmox1* in RAW 264.7 cells (n = 6 per group).
