

FigureS1. External validation results in GSE54460 dataset. **A-B**, differences in expression of m6A RNA methylation regulators regarding GS (A) and psa (B); **C**, KM curve of RFS between high-risk and low-risk group; **D-E**, distribution of risk scores in patients stratified by GS (D) and psa (E). GS, Gleason score; psa, prostate specific antigen; KM, Kaplan-Meier; RFS, recurrence-free survival.
