

Supplementary Figures and Tables

Supplementary Figures:

Figure S1. Analysis of the dysregulated genes in TGF- β (A) and p53 (B) signaling pathway by the KEGG data base. The dysregulated gene is in red.

Figure S2. Detection of the expressions of 16 microRNAs, including 15 microRNA identified by microarray and miR-146b-5p (G), in 12 pairs of pancreatic cancer tissues and matched normal pancreatic tissues by RT-PCR.

Figure S3. Detection of the expressions of 16 microRNAs, including 15 microRNA identified by microarray and miR-146b-5p, in five pancreatic cancer cell lines and normal pancreatic tissues by RT-PCR.

Figure S4. Over-expression of miR-146b-3p affected cell growth, cell cycle, apoptosis. A) Growth of MIA PaCa-2 and PANC-1 cells was shown after transfection with miR-146b-3p mimic or mimic NC or no transfection. The growth index was assessed at 1, 2, and 3 d by the CSFE assay.B) Over-expression of miR-146b-3p resulted in G1 arrest and S-phase increasing in Mia PaCa-2 and not in BxPC-3 cells as measured by PI staining.C) Apoptosis of MIA PaCa-2 and PANC-1 cells were detected by Annexin V/PI after treatment with miR-146b-3p mimic or mimic NC or no transfection in 72 h. All data are shown as mean \pm SD. *, P < 0.05; **, P < 0.01.
