

S11 Fig. Detection of KatG protein in lysates from *Mtb mc² 6206* in ZRM and ZLM. Proteins from day 10 cultures from two independent growths in ZRM and ZLM were extracted using TRIzol™ and 10 µg protein per sample were resolved on a 5%/12% sodium dodecyl sulfate polyacrylamide gel. Two identical gels were resolved, one gel was stained with Coomassie Blue as a control for protein loading amount and the other was used for blotting.
