

Figure S1. Effects of BAX on the protein expression levels of collagen I, III and IV, and fibronectin in HL-1 cardiomyocytes and overexpression efficiency of PTBP1 and TAGLN2. (A) BAX overexpression efficacy in HL-1 cardiomyocytes was verified by RT-qPCR. ** $P < 0.01$ vs. CON. (B) Effects of BAX overexpression on the protein expression levels of collagen I, III and IV, and fibronectin in DOX-treated HL-1 cardiomyocytes. (C) PTBP1 and (D) TAGLN2 overexpression efficiency was verified by RT-qPCR. ** $P < 0.01$ vs. NC. miR, microRNA; DOX, doxorubicin; CON, control; NC, negative control; RT-qPCR, reverse transcription-quantitative PCR.
