

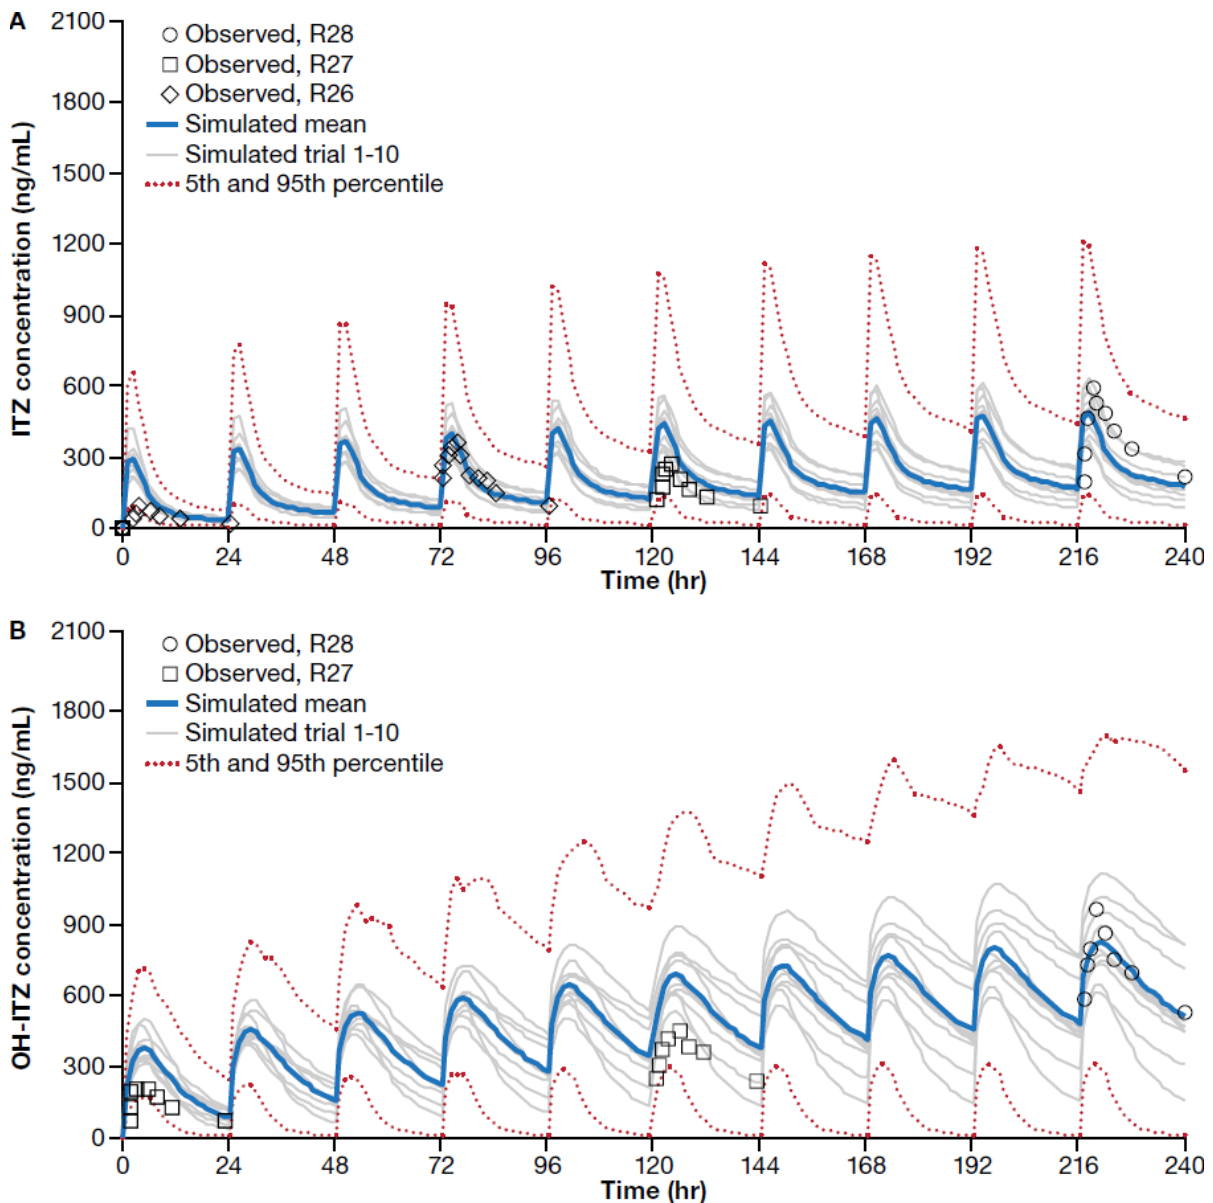

Figure S1. Simulated vs observed plasma concentration-time profiles of itraconazole and hydroxy-itraconazole following multiple doses of itraconazole in capsule formulation under a fasted state

The dotted points are observed data following itraconazole doses of 200 mg daily for 4 days (denoted as R26),¹ for 6 days (denoted as R27),² and for 10 days (denoted as R28).³ Hydroxy-itraconazole data from the study¹ are not available. The simulated mean is the mean of 100 individuals (10 trials of 10 subjects per trial); simulated trial is the mean of 10 subjects in each trial; the 5th and 95th percentile for 100 individuals simulated represents the 5th and 95th highest concentrations from the ranked concentrations.

Abbreviations: ITZ, itraconazole; OH-ITZ, hydroxy-itraconazole.
