COVID-19 Model

COVID-19 Risk Prediction Model

COVID-19 Risk of severe infection

* Probability of intensive care unit admissions, mechanical ventilation, death within 14 days of hospitalization

Age :

Sex :

Dyspnea:

Diabetes:

Troponin (HsTroponin>19ng/L, Troponin I>=0.04ng/mL):

Liver function (AST, IU/L):

C-Reactive Protein (mg/dL):

D-Dimer (ng/mL):

COVID-19 Model

Result

14-Day Risk of severe COVID-19: 25.3%

14-Day Risk of Death: 4.2%

* Severe COVID-19: defined by intensive care unit (ICU) admission(s), use of mechanical ventilation, and/or death within 14 days of hospitalization.
