Table S2. A. WHO classification of 645 cases with corresponding chemical ligation-dependent probe amplification (CLPA) diagnostic bin. Patients whose samples failed the CLPA assay are also included. **B.** 32 additional malignant cases that passed QC and had a definitive WHO classification but were excluded from modeling due to low numbers for each entity with distinct biology.

A

WHO Classification	CLPA Diagnostic Bin	N
B lymphoblastic leukemia/lymphoma	Agg BCL	5
Burkitt lymphoma	Agg BCL	5
Diffuse large B cell lymphoma, germinal center type	DLBCL	68
Diffuse large B cell lymphoma, non-germinal center type	DLBCL	152

Table S5. Individual diagnostic, clinical characteristics and treatment. Diagnosis at INCAN was obtained based on H&E staining with or without immunohistochemistry (IHC), as indicated in column C. Stanford diagnoses were based on the 2016 WHO classification as outlined in the Methods. Column E compares the diagnosis between INCAN and Stanford. "FULL" concordance indicates an identical finalized diagnosis. "PARTIAL" concordance indicates cases where the INCAN diagnosis and the Stanford diagnosis were within similar but not identical morphologic groupings. Any case in which the cell lineage between B, T, and NK cell lymphoma were discordant were considered completely discordant and indicated by "NONE." Lymphoma bin indicates the diagnostic bin for each case based on the Stanford diagnosis. Chemical ligation-dependent probe amplification (CLPA) diagnosis indicates the highest probability bin as indicated by the CLPA assay. In Column H, cases are classified as "indeterminate" if the CLPA probability call was <60%, "Yes" if the CLPA diagnosis differed from the INCAN diagnosis, and "No" if the CLPA diagnosis was identical to the INCAN diagnosis. Departments in Guatemala (Column M) are synonymous with states or provinces. Stage at diagnosis is based on review of the medical record and imaging but patients may have been understaged based on incomplete imaging or bone marrow assessment. HIV, Hepatitis B (HBsAb) and Hepatitis C (HCV Ab) status were based on antibody testing. The prognostic index was determined based upon the patient's original diagnosis and appropriate risk scoring system (IPI for DLBCL, PTCL, NKTCL, and MZL, MIPI for MCL, FLIPI for FL, Hasenclever for HL). Abbreviations: follicular lymphoma (FL), diffuse large B cell lymphoma (DLBCL), peripheral T cell lymphoma (PTCL), mantle cell lymphoma (MCL), aggressive B-cell lymphoma (AGG_BCL), Hodgkin lymphoma (HL), extranodal NK/T cell lymphoma (NKTCL), anaplastic large cell lymphoma (ALCL), cyclophosphamide/daunorubicin/vincristine/prednisone (CHOP), doxorubicin/bleomycin/vinblastine/dacarbazine (ABVD), gemcitabine/cyclophosphamide/vincristine/prednisone (GCVP), cyclophosphamide/vincristine/prednisone (CVP), dexamethasone/high dose cytarabine/cisplatin (DHAP), dexamethasone/methotrexate/ifosfamide/L-asparaginase/etoposide (SMILE) and rituximab (R).

See attached .xls file

Table S6. Concordance for 643 patient samples obtained for suspicion of lymphoma and assessed at both INCAN and Stanford. At INCAN, samples were evaluated by hematoxylin and eosin (H&E) staining alone or H&E with IHC. At Stanford, all samples were evaluated using H&E and IHC, as well as FISH in a subset. Gray boxes are considered concordant. In some cases, it was not possible to ensure concordance; for example, high-grade BCL at INCAN does not distinguish between lymphomas like Burkitt or LBL (which were included in the Agg BCL bin) and DLBCL. Overall, 244 (38%; 95% CI: 34-42%) were concordant. Additional abbreviations: CLL/SLL, chronic lymphocytic leukemia/small lymphocytic lymphoma; INC, incomplete diagnosis; T-LL, T-cell lymphoblastic lymphoma.

Table S11. Assay performance based on tissue characteristics among samples in the validation cohort. (A) Cases are grouped by earliest documented date of biopsy. *Cases <2006 were included in our cohort because they were documented in the pathology record between 2006-2018 but the actual date of biopsy was earlier. Absolute number of cases that were correctly (Yes) or incorrectly classified (No) in each group are shown with (%) of total cases. Fisher exact test between unknown (n=10), 2006-2008 (n=22), 2009-2011 (n=35), 2012-2014 (n=33) and all cases 2015 or later (n=63), p=0.78. **(B)** Cases are grouped by biopsy site lymph node or secondary lymphoid tissue (SLT) vs extranodal. Absolute number of cases that were correctly (Yes) or incorrectly classified (No) in each group are shown with (%) of total cases. Fisher exact test between nodal/SLT (n=117) and extranodal (n=37), p=0.79.

(A)

Correct CLPA Classification	Unknown Date	<2006*	2006-2008	2009-2011	2012-2014	≥2015
Yes	9 (90)	0 (0)	18 (82)	30 (86)	30 (86)	53 (84)
No	1 (10)	0 (0)	4 (18)	5 (14)	3 (9)	10 (16)

(B)

Correct CLPA Classification	Nodal/Secondary Lymphoid Tissue	Extranodal
Yes	100 (85%)	31 (84%)
No	17 (15%)	6 (16%)

Table S12. Cases from the validation cohort with CLPA-based calls at probability $\geq 60\%$ that were misclassified compared to IHC.

Case	INCAN Diagnosis	WHO Diagnosis	WHO Category	CLPA Result	Comment
E0039	Classical Hodgkin Lymphoma	PTCL, NOS	TCL	HL	Lymphohistiocytic infiltrate with atypical cells concerning for peripheral T cell lymphoma; Hodgkin/Reed-Sternberg cells not initially seen, however re-review of IHC markers showed rare CD30+, CD15+ (subset), PAX5+ (variable), MUM1+, EBV ISH negative cells consistent with classic Hodgkin lymphoma
E0290	Lymphoproliferative Disorder	FL, Grade 3A	FL	DLBCL	Morphological range of follicular lymphoma with predominantly grade 3, but also grade 1-2; all areas including those with a predominance of large cells are associated with FDCs; findings are consistent with follicular lymphoma
E0431	High grade pleomorphic lymphoma	ALCL, ALK-negative	TCL	HL	Bands of sclerosis with nodules containing large cells showing crescent/"horse-shoe" nuclei; CD30+, CD15+ (subset), CD45+, CD43+, CD4+ (dim), TIA+, granzyme B+, ALK-negative for all B markers; findings are consistent with ALCL, ALK-
E0482	High grade Diffuse Large Cell Lymphoma	PTCL, NOS	TCL	NKTCL	Predominantly necrotic tissue with focal areas of atypical lymphoid cells, with possible angiodestruction; CD3+, CD5-, CD56-, CD8-, TIA-, granzyme B-, perforin-, CD43+, PDL1+; EBV ISH and LMP1 show few scattered cells; findings show a predominant T cell phenotype, however given extensive necrosis antigenicity may be a concern
E0578	Lymphoproliferative Disorder	DLBCL	DLBCL	FL	Sheets of large pleomorphic B cells with 75% Ki67, c-MYC+, not associated with FDCs; findings consistent with DLBCL
E0639	Diffuse Large B Cell Lymphoma	FL, Grade 1-2	FL	DLBCL	Mixture of small and large cells, predominantly small, however there are areas which show poor fixation which may alter cell size interpretation; BCL6+, BCL2+, CD10-, CD5-, c-MYC (<40%), Ki67 not available; findings compatible with follicular lymphoma grade 1-2
E0695	Lymphoproliferative Disorder	B-LBL	Agg BCL	DLBCL	Monotonous, medium sized B cells with open chromatin; CD45+ (dim), CD20 (negative to dim), PAX5+, CD10+, TdT+; findings consistent with B lymphoblastic lymphoma/leukemia
E0913	Diffuse Large B Cell Lymphoma	DLBCL	DLBCL	FL	Sheets of atypical medium sized B cells with 50% Ki67 and no associated FDC networks; findings compatible with DLBCL

Table S13. Full performance characteristics for CLPA-based calling in the cohort of samples from patients with relapsed/refractory lymphoma (n=39). WHO classification for each lymphoma based on H&E, IHC, and when indicated FISH is shown in columns and CLPA calls are in rows. Abbreviations: PPV=positive predictive value, NPV=negative predictive value. *calculated comparing factor to remaining in a one versus all approach; †(specificity+sensitivity)/2; brackets [] indicate 95% confidence interval.

Table S14. Detailed cost analysis for assay reagents and supplies in Guatemala. A. Analysis conditions **B.** Quantity of reagents per reactions **C.** Quantity of reagents per 96 reactions **D.** Laboratory consumables **E.** Additional reagents **F.** Total assay cost. Prices are listed in Guatemalan quetzale (Q) and U.S. dollars (\$)

A

Runs of 95 samples + 1 negative control / week
Using the cartridge version of 6 months lifetime
Using 3 Aluminum foil per run (96 reactions)
Using 2 Plastic foil per run (96 reactions)
Using 1 cathode buffer container every two weeks, because that is the cathode buffer lifetime
Using 16 Septa for cathode container buffer every two weeks
Using 96 Septa for plate every run
Using 10 uL tips to introduce the scrolls
The price in dollars was calculated with the official exchange rate of the Bank of Guatemala at 12/10/2019

Lab Consumable	Units of measurement (UOM)	UOM Qty	Price per UOM (Local currency)	96 Units/reaction	Price per 96 reactions (Local currency)	Price per 96 reactions (\$)
96 well PCR plate	Pack	10	Q 663.08	2	Q 132.62	\$16.81
2 mL tubes	Pack	250	Q 205.00	193	Q 158.26	\$20.06
Cathode Buffer Container (125 injections per container)	Box	4	Q 1,413.96	0.5	Q 176.75	\$22.40
Seq Plate	Box	10	Q 663.08	1	Q 66.31	\$8.40
10 uL tips	pack	960	Q 731.28	480	Q 365.64	\$46.34
20 uL tips	pack	960	Q 731.28	384	Q 292.51	\$37.07
100 uL tips	pack	960	Q 731.28	288	Q 219.38	\$27.81
200 uL tips	pack	960	Q 731.28	864	Q 658.15	\$83.42
1000 uL tips	pack	960	Q 731.28	6	Q 4.57	\$0.58
Cartridge (1000 reactions)	box	1000	Q 19,219.20	96	Q 1,845.04	\$233.85
Reagent reservoir	pack	10	Q 186.00	1	Q 18.60	\$2.36
Plastic Foil	box	100	Q 1,553.88	2	Q 31.08	\$3.94
16 Septa for Cathode buffer container	pack	20	Q 2,814.48	1	Q 140.72	\$17.84
Septa for Plate	pack	20	Q 3,700.00	1	Q 185.00	\$23.45
Aluminum Foil	pack	100	Q 2,016.00	3	Q 60.48	\$7.67
Gloves	box	100	Q 55.00	8	Q 4.40	\$0.56
Consumable price per 96 reactions					Q 4,359.51	\$552.54

E

Reagent	Units of measurement (UOM)	UOM Qty in uL	Price per UOM (Local currency)	uL used per 96 reactions	Price per 96 reactions (Local currency)	Price per 96 reactions (\$)
GeneScan 600LIZ	2 tubes of 200 uL each	400	Q 4,526.11	48.15	Q 544.83	\$69.05
Formamide	bottle	5000	Q 471.74	1685.25	Q 159.00	\$20.15

Reagent price per 16 reactions					Q 703.83	\$89.21
---	--	--	--	--	-----------------	----------------

F

	Local Currency	U.S. Dollars
Total Cost per 96 reactions	Q 5,063.34	\$641.74
Cost per patient (in runs of 95 patients + 1 negative control)	Q 53.30	\$6.76

Supplementary Figure Legends

Figure S1. IHC and gene expression assessment. **A.** Examples of assessments from tissue microarray (TMA). Top left, H&E of EBV+ Diffuse large B cell lymphoma (DLBCL). Top middle, *in situ* hybridization for EBV in DLBCL. Top right, CD20 expression in EBV+ DLBCL. Bottom left, H&E of classic Hodgkin Lymphoma (cHL). Bottom middle, *in situ* hybridization for EBV in cHL. Bottom right, CD30 expression in cHL. **B.** CLPA assay measures gene expression directly from 6-10 um FFPE section through same tube RNA isolation and by chemical ligation of probes bound to the RNA followed by streptavidin-conjugated paramagnetic bead-capture. PCR is performed so that each product has a unique size. Quantification of the size-differentiated, ligated probe amplification products is performed using a capillary electrophoresis instrument. SS, spacer sequence; TS, target sequence; UFP, universal forward primer; URP, universal reverse primer

Figure S2. **A.** Histograms of normalized CLPA expression for each gene for all pre-treatment cases in the test and validation sets (n=560) **B.** Boxplots of normalized CLPA expression values by WHO diagnosis. Horizontal lines indicate the median, boxes represent the interquartile range (IQR) with error bars extending to 1.5 times the IQR, and dots indicating value >1.5 time the IQR. **C.** Spearman correlation plot matrix where blue indicates positive correlation coefficient and red indicates negative correlation coefficient. Color intensity and the size of the circle are proportional to the correlation coefficients.

Figure S3. **A.** Spearman correlation plot matrix for the relapsed cases (n=39) where blue indicates positive correlation coefficient and red indicates negative correlation coefficient. Color intensity and the size of the circle are proportional to the correlation coefficients.

B. Boxplots of normalized CLPA expression values by diagnosis for the relapse cases (n=39). Horizontal lines indicate the median, boxes represent the interquartile range (IQR) with error bars extending to 1.5 times the IQR, and dots indicating value >1.5 times the IQR.
