Supplementary Table 5. Lesion-Based Diagnostic Performance of DLLD in the Detection and Classification of Cyst, Hemangioma, and Colorectal Liver Metastasis in the Validation Cohort

Nodule Type	Total Number	TP	FN	FP	Sensitivity	FPP
Cyst	229	186	43	50	81.22 (186/229)	0.588 (50/85)
Hemangioma	21	5	16	16	23.81 (5/21)	0.188 (16/85)
Metastasis	99	81	18	113	81.82 (81/99)	1.330 (113/85)
All three focal lesions	349	272	77	179	77.94 (272/349)	2.106 (179/85)

DLLD = deep learning-based lesion detection algorithm, FN = false negative, FP = false positive, FPP = false positives per patient, TP = true positive
