

Karolinska catheter ablation registry

1836 patients
with paroxysmal or persistent atrial fibrillation ablated between years 2012 – 2017
assessed for eligibility

Did not meet inclusion criteria

610 patients – not first-time PVI procedure and / or additional ablation lines in left/right atrium and / or ablation of complex fractionated atrial electrograms

239 patients - cryo catheter ablation

41 patients – carrier of pacemaker or implantable cardioverter defibrillator

18 patients – major complications during catheter ablation

29 patients - other reasons

899 patients

Excluded during follow-up

225 patients - insufficient follow-up data regarding recurrences

180 patients - atrial fibrillation in ECG measurement at PRE, POST or 3M

9 patients - ECG measurement not available at PRE or POST

3 patients – death during follow-Up

482 patients
included in analysis
