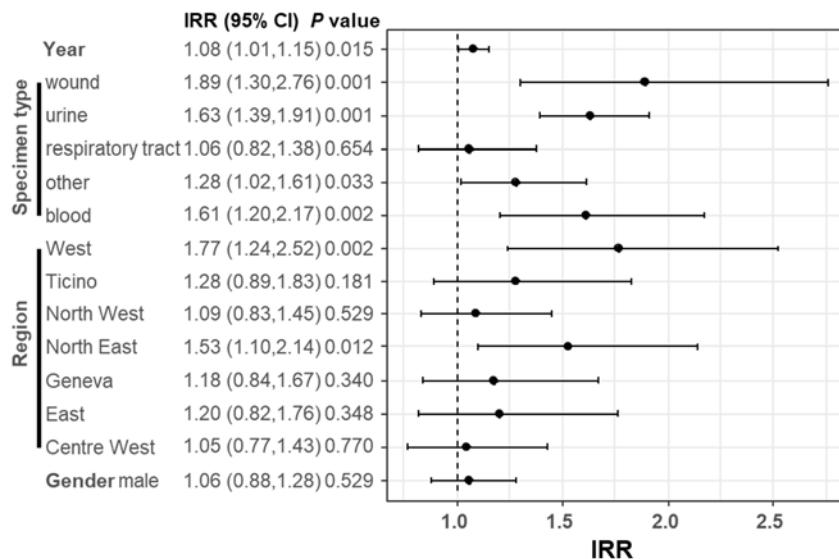

Figure A1. Factors affecting the number of CPE isolates for cases related to infections only.
IRR: incident rate ratio; multivariable Poisson regression. The "infection only" samples were defined based on the classification given by "clinical importance" associated with the samples of origin, and not by the specimen type.

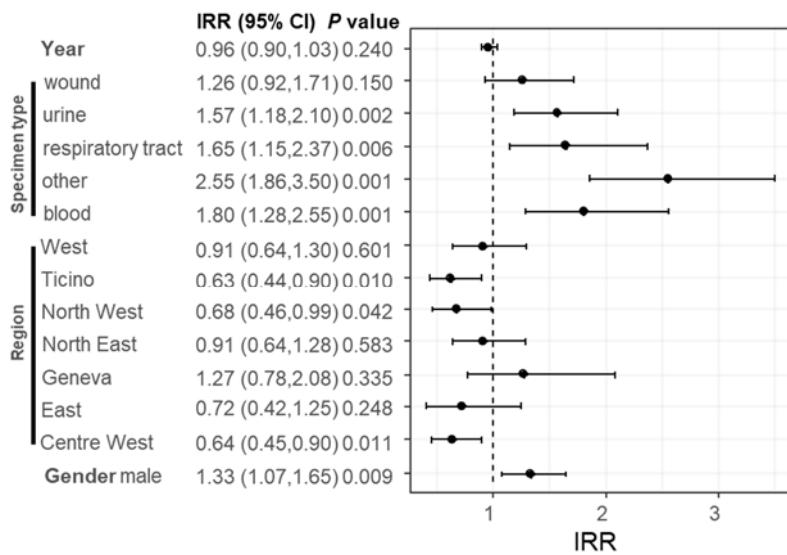

Figure A2. Factors affecting the number of CPE isolates including only the laboratories that sent data consistently from 2013 to 2018. IRR: incident rate ratio; multivariable Poisson regression
