

Figure S13

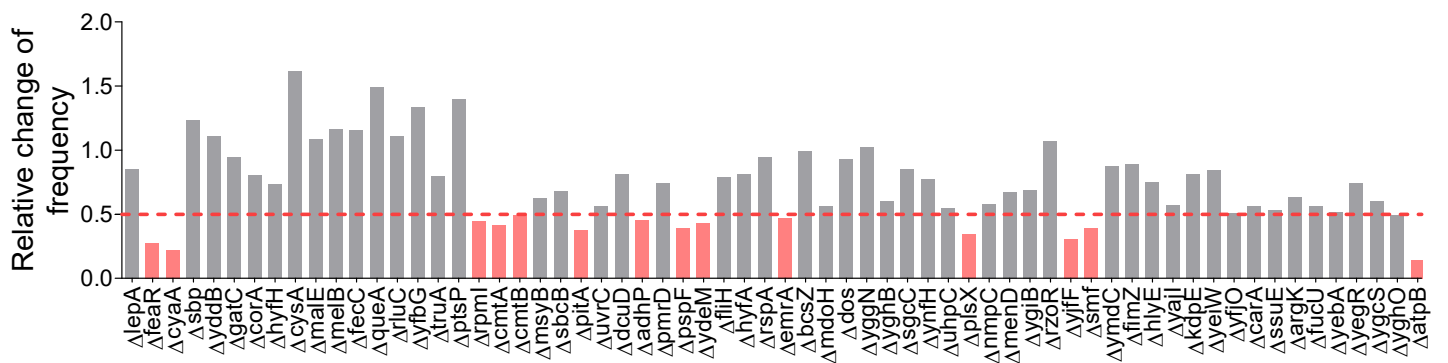

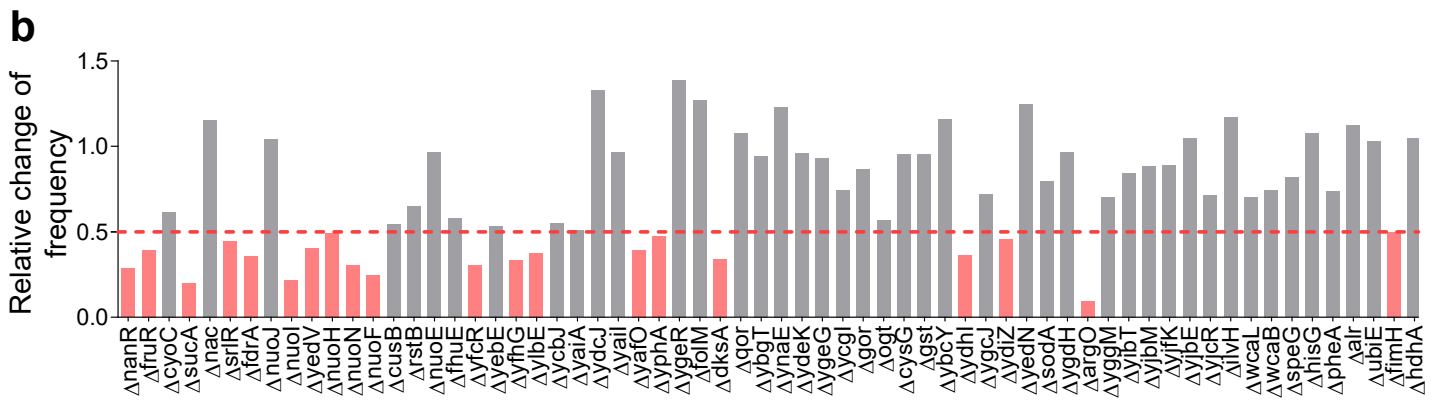

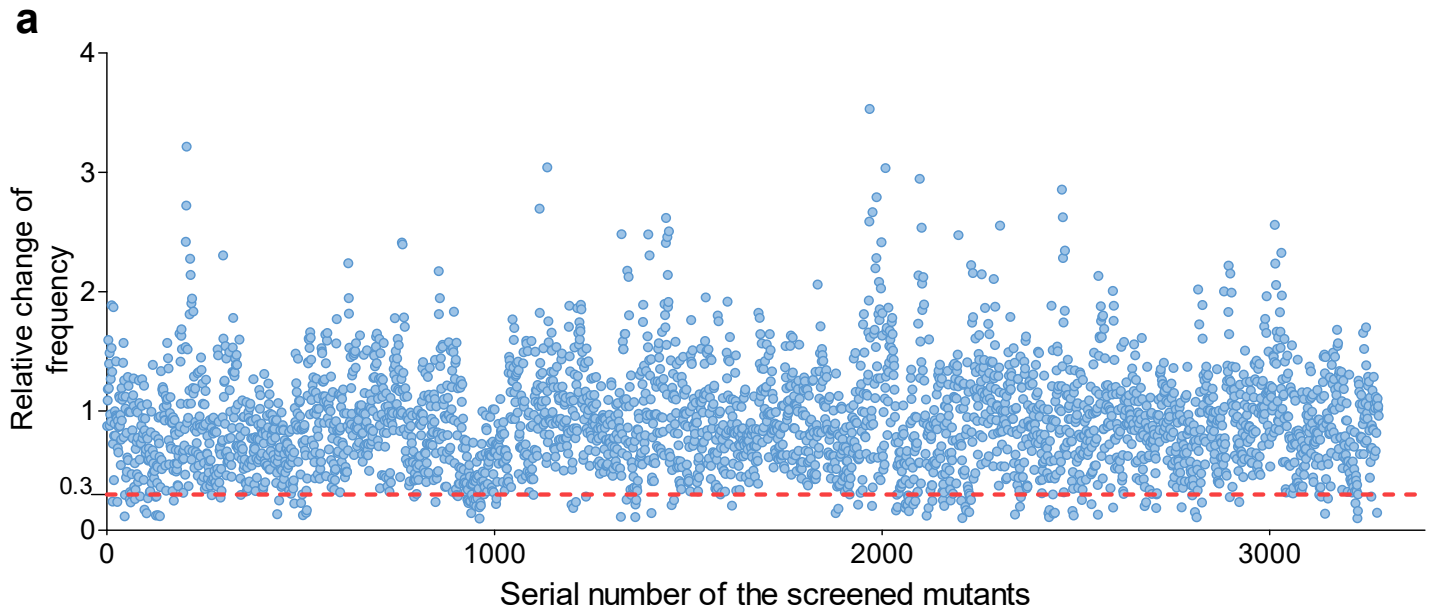

Figure S13. Whole-genome screening for regulators of BacFlash biogenesis.

(a) Results for BacFlash frequency in the first-round screening. The BacFlash frequency in each mutant was normalized to WT frequency. Of 3281 mutants screened, those displaying $\geq 70\%$ decrease of BacFlash frequency were selected for the second-round screening.

(b) Results for BacFlash frequency in the second-round screening. The BacFlash frequency in each mutant was normalized to WT frequency. Of 128 mutants from the first-round screening, those displaying $\geq 50\%$ decrease (red bars) were selected for the third-round screening.

The data are mean values. $n = 2 - 6$ image stacks for each group.
