

Figure S9

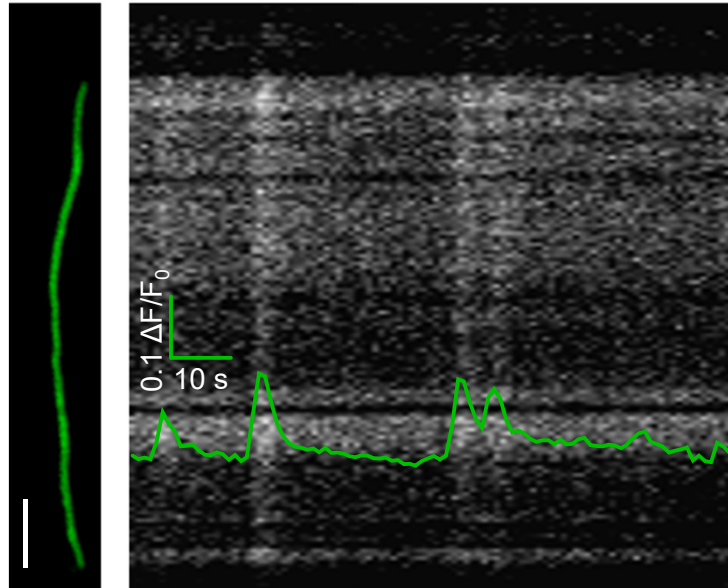

Figure S9. Spatial synchrony of BacFlashes in filamentous *E. coli* cells. Left: confocal image of a filamentous *E. coli* cell expressing pHluorin. Cell division was inhibited by cephalixin treatment. Scale bar: 5 μm . Right: kymograph of fluorescence intensity along the length of a cell. Note that repetitive BacFlashes occurred synchronously over several tens of microns. Overlay (green) shows spatially averaged fluorescence intensity.
