

Supplementary Figure 2. Volcano plot of differentially expressed genes among different comparisons of cervical samples: cervical squamous cell carcinoma (SCC), adenocarcinoma (ADC) from our study and from the TCGA, and non-cervical carcinoma cervix tissue (non-CC) [10]. Each dot is an expressed gene. In red, the differentially expressed genes with $|\log_2\text{FC}| > 2$ (blue dashed line) and $p < 0.01$ (green dashed line). Differentially expressed genes between SCC and ADC in our samples (A), in TCGA samples (B), and SSC (C) and ADC (D) versus non-CC cervical samples.
