In addition to this document, the supplementary materials include an online video and a zipped directory including all the data and code
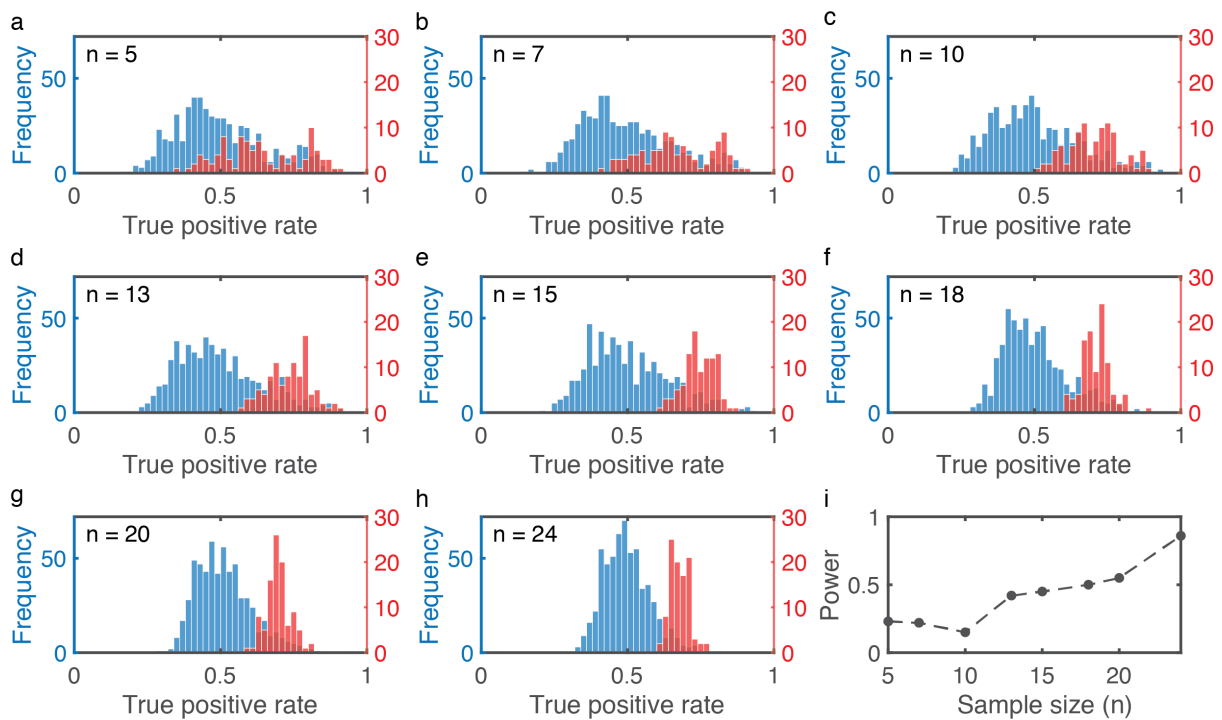

Supplementary Figure 1: Power at different sample sizes

To calculate the power of our experiment with 27 positive participants we performed the 600-fold bootstrap described in the text for assigning a p value, but now using samples of different size. Thus, the power of the experiment at 5 positive samples was the proportion of selections of 5 positive samples which resulted in significant classifier performance. And so on for 7,10,13, and so on.

Supplementary Video Online

A video demonstrating activity at the drive-through. The person being tested is an experimenter demonstrating, and not a participant.

Supplementary Materials Data and Code folder

A folder containing all the raw data, the code, and a readme file explaining how to run it.
