

**The full Western blot relating to Figure 1a.** the Western blot analyses which form the basis of Figure 1a showing CCT8 (molecular weight 59 kDa) (a) and the loading control GAPDH (molecular weight 37 kDa) within the thymic populations DN, DP, SPCD4 (CD4) and SPCD8 (CD8) (b). Please note that the membrane was probed first with an anti-CCT8 antibody (a) and then with an anti-GAPDH antibody (b).
