

Supplemental Figure for:
Muscle Loss is Associated with Overall Survival in Patients with Metastatic Colorectal Cancer Independent of Tumor Mutational Status and Weight Loss
Till Dominik Best et al.

Supplemental Figure 1. Timing of Follow-up Scans.

Bee plot overlaid with boxplots showing the distribution of CT scan dates around each of the three follow-up time points. The x-axis is relative to the baseline CT scan. Therefore, all baseline scans are exactly on day 0 (n = 226). Red vertical lines indicate the exact date, and gray dashed lines indicate the 45-day range. To account for the fluctuation of scan intervals, we performed linear interpolation to calculate percent change from baseline to exactly 3-, 6- and 12- month follow-up (see Patients and Methods).

CT, computed tomography.
